About Telewave

Telewave, Inc. designs and manufactures rugged, high-quality wireless system equipment for domestic and international markets. We support conventional and trunked radio systems, as well as Cellular, SMR, PCS, Trunking, Paging, and Broadcast services. Our customers include public safety providers, local and state governments, federal agencies, wireless system operators, and businesses,

Since 1972, Telewave has focused on the needs of our customers, providing the best American-made wireless system products, with the fastest on-time delivery record in the industry. As pioneers of low-loss combining, Telewave's early reputation as a premier problem solver was made by reorganizing and "cleaning up" some of the most crowded and complex radio transmitter sites in the San Francisco Bay Area. Where off-the-shelf products for interference control often did not exist, Telewave built custom high performance equipment to meet customer requirements. These innovative designs became the foundation of our early product line.

Many equipment manufacturers will not accommodate custom orders or special requirements. Telewave has the engineering expertise and manufacturing flexibility that allows us to quickly modify existing equipment, or design a completely new product line to meet any performance goal. Initial evaluation and consultation have always been provided to customers at no charge.

Telewave products are supported by a full network of US and international sales engineers, representatives, and distributors. Telewave is certified to meet the requirements of ISO 9001:2008, and our commitment to high quality and excellent customer service continues to guide our efforts.

TRANSMITTER COMBINERS

Cavity-Ferrite Low Loss

Low-loss combiners use one or more tuned cavities and a dual-junction isolator for each channel to maximize isolation between transmitters, with the lowest possible insertion loss.

Ceramic

Ceramic enhanced cavities have the same or greater performance as full size cavities, but in a smaller package. This greatly reduces the volume and rack space of combiners which use these cavities.

Hybrid

Hybrid combiners make use of a hybrid coupler and dual isolator for each transmitter. The coupler allows frequencies to be combined with no minimum spacing, but will have higher insertion loss.

Pass-Notch

A pass-notch combiner uses a combination of pass and notch cavities arranged so that each transmitter sees a low impedance path to the antenna, but is isolated from all other transmitters.

LOWBAND COMBINERS

Telewave Lowband and Midband Combiners offer high performance with industry-standard Telewave reliability.

Telewave is one of the few remaining manufacturers of full size, high-“Q” cavity filters between 30 and 88 MHz. These filters can be deployed in a number of configurations for low band combining and receiver filtering.

The M101-030-5T8R series uses 16 cavities to combine 5 transmitters in the 37 MHz band and 8 receivers between 47-49 MHz, with transmitter spacing of only 100 KHz.

Telewave has also designed a unique system to combine 2 transmitters in the 45 MHz band with 100 KHz separation, which employs custom designed Telewave hybrid couplers and a dual-cavity sideband filter.

Lowband systems present a number of operational challenges, but Telewave has the tools to custom design a complete filtering system for any requirement.

M101-030-5T8R

M104-150-4TPC 4 CHANNEL LOW LOSS COMBINER

The M104-150-4TPC Low Loss VHF Combiner offers the same high performance as our standard low loss combiners, in a much smaller package. State of the art technology allows us to create one of the world's smallest low loss combiners.

The M104-150-4TPC combines up to 4 channels per unit, with 300 KHz separation, in only 8.75" of standard rack space. The modular combining units can be grouped for up to 16 channels to accommodate system expansion.

The optional receiver system utilizes the Telewave TPMC-1543 multicoupler for enhanced receiver performance, and distribution to 4 receivers.

SPECIFICATIONS	
Frequency range	148-170 MHz
Channels	1-4 channels into 1 antenna
Channel separation (min)	300 KHz
Input power (max)	100 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	3.4 dB - 4 ch. at 300 KHz spacing
TX-to-TX isolation (typ.)	75 dB
Antenna to TX isolation (typ.)	70 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	4" square / 1/4 wave
Operating temperature	-30°C to +60°C
Mounting / Connectors	19" rack mount / N Female
Panel dimensions (HWD) in. / cm	8.75 x 19 x 12.5 (21.6 x 48.3 x 31.75)
Weight lb. (kg)	32 (14.5)

M108-150-TRM SERIES LOW LOSS VHF COMBINER

The M108-150-TRM series uses up to ten 8", high "Q" low-loss cavities mounted on a standard 19" x 72" rack. These combiners are available in a vertical or horizontal configuration, depending on site requirements.

Up to 8 cavities can be mounted vertically in two groups, or up to 10 cavities can be mounted horizontally on two 5-channel panels. The vertical configuration is useful for installation in limited space or direct wall mounting. Each cavity also contains internal support for the tuner assembly specifically to enable horizontal mounting.

Optional power monitoring for each channel is available, as well as remote keying for each transmitter. The PM10C2S-1C wattmeter panel uses only 1.75" of rack space.

An optional receiver system can be built around the Telewave compact preselector series, or full-size cavities as needed. Depending on the application, the TPCP-1544C or TPCP-1556 preselector may be mounted in the upper portion of a 72" or 84" rack, along with a 1RU receiver panel for up to 16 channels.

With new narrowband channel assignments, proper filtering is even more critical. The M108-150-TRM series allows operators of high-density VHF systems to take advantage of new technology, and enhance the performance of existing systems.

with preselector, power
monitoring, and RX panel

M108-150-8TRM
vertical mounting

SPECIFICATIONS	
Frequency range	148-174 MHz
Channels	1-10 channels into 1 or 2 antennas
Channel separation (min)	125 KHz
Input power (std. / opt.)	100 / 150 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	3.25 dB - 5 ch. at 250 KHz spacing
	4.0 dB - 5 ch. at 150 KHz spacing
TX-to-TX isolation (typ.)	75 dB
Antenna to TX isolation (typ.)	70 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	8" diameter / 1/4 wave
Operating temperature	-30°C to +60°C
Mounting / Connectors	19" rack mount / N Female
Panel dimensions (HWD) in. / cm	24.5 x 19 x 26 / 62 x 48.3 x 66
Weight lb. (kg)	150 (68.1) 5 ch.

M101-150-8TRM19 LOW LOSS VHF COMBINER FOR CLOSE SPACING

The M101-150-8TRM19 uses up to eight 10", high "Q" low-loss cavities mounted on a standard 19" x 72" rack. This combiner provides as much as 75 dB isolation for each transmitter, with spacing as close as 105 KHz. Each channel has a separate isolator with 60 Watt load (standard), and all tuning is accessible from the front panel.

Optional power monitoring for each channel is available, as well as remote keying for each transmitter. The PM10C2S-1C wattmeter panel uses only 1.75" of rack space.

The optional receiver system is built around the Telewave compact preselector series. Depending on the application, the TPCP-1544C or 1546C preselector may be integrated directly into the upper portion of the M101-150 84" rack. The 1RU receiver panel also mounts straight into the rack, preserving valuable site floor space.

With new narrowband channel assignments, proper filtering is even more critical. The M101-150-TRM19 series allows operators of high-density VHF systems to take advantage of new technology, and enhance the performance of existing systems.

TRANSMITTER COMBINERS

OPTIONAL 100 WATT LOADS SHOWN

SPECIFICATIONS	
Frequency range	148-174 MHz
Channels	1-8 channels into 1 or 2 antennas
Channel separation (min)	105 KHz
Input power (std. / opt.)	100 / 150 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	3.0 dB - 5 ch. at 250 KHz spacing 3.8 dB - 5 ch. at 150 KHz spacing
TX-to-TX isolation (typ.)	75 dB
Antenna to TX isolation (typ.)	70 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	10" diameter / 1/4 wave
Operating temperature	-30°C to +60°C
Mounting / Connectors	19" rack mount / N Female
Rack dimensions (HWD) in. (cm)	84 x 20 x 26 (214 x 51 x 66)
Weight lb. (kg)	250 (113.5)

M101-150-8TRM LOW LOSS VHF COMBINER

The Telewave M101-150 Low Loss VHF Combiner is a unique, fully self-contained transmitter and receiver combining system. The custom welded 24" steel frame provides a rugged enclosure for all system components. This integrated design allows channels to be added, retuned, or removed in the field at any time, without disrupting other active channels. The 24" x 48" rack handles up to 8 channels and 1 or 2 antennas.

With new narrowband channel assignments, proper filtering is even more critical. 10-inch High-"Q" cavities with dual isolators provide 75 dB isolation between channels, and the optional receiver panel drives multiple receivers from a single antenna. The PM8C2S wattmeter panel allows forward or reverse power monitoring for each channel, or total power to each antenna. The M101-150 series allows system operators to take advantage of new technology,

and enhance the performance of existing systems.

FEATURES

- ALL TUNING FROM FRONT
- 8 TRANSMITTERS INTO ONE ANTENNA
- INTEGRATED RCVR PANEL
- SELF-CONTAINED, BUILDING BLOCK CONCEPT
- LESS THAN 3 dB INSERTION LOSS WITH PROPER FREQUENCY SELECTION
- ALL CONNECTIONS AT TOP OF RACK
- 75 dB TX TO TX PROTECTION
- 130 dB RX INTERMOD PROTECTION WITH RX PNL.
- RF POWER MONITORING FOR ALL CHANNELS AND ANTENNA
- REMOTE TX KEYING
- FIELD TUNABLE

SPECIFICATIONS	
Frequency range	148-174 MHz
Channels	1-8 channels into 1 or 2 antennas
Channel separation (min)	105 KHz
Input power (std. / opt.)	100 / 150 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	3.0 dB - 5 ch. at 250 KHz spacing 3.8 dB - 5 ch. at 150 KHz spacing
TX-to-TX isolation (typ.)	75 dB
Antenna to TX isolation (typ.)	70 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	10" diameter / 1/4 wave
Operating temperature	-30°C to +60°C
Mounting / Connectors	24" rack mount / N Female
Rack dimensions (HWD) in. (cm)	48x24x31 (122x61x79)
Weight lb. (kg)	250 (113.5)

M106-450-4/8TPC COMPACT TRANSMITTER COMBINER PANELS

The Telewave M106-450-4TPC and 8TPC Compact Low Loss Combiner Panels are designed for new, narrowband technologies. Six-inch diameter high "Q" cavities and horizontal mounting dual isolators provide high performance in only 7RU (12.25").

All components in these field-expandable combiners are completely passive. This design allows for front panel tuning, simplifying installation and maintenance, and allows for addition of channels without any disruption of service.

These combiners are shipped without racks, for mounting in existing installations.

FEATURES

- ULTRA COMPACT - 4 CH. ONLY 12.25" HIGH
- 1-8 TRANSMITTERS INTO ONE ANTENNA
- LESS THAN 3 dB INSERTION LOSS (4 CH.)
- MODULAR PANELS SIMPLIFY EXPANSION
- COMPLETELY SELF-CONTAINED
- LOW COST PER CHANNEL
- FULLY FIELD TUNABLE
- 80 dB TX TO TX PROTECTION

TRANSMITTER COMBINERS

MAJOR OPTIONS

- HEAVY DUTY 19" RACKS
- POWER MONITORING
- WATTMETER PANEL
- RECEIVER MULTICOUPLER
- EXPANSION KITS TO 8 CHANNELS (M106-450-1T)

SPECIFICATIONS	
Frequency range	400-512 MHz
Channels	1-8 channels into 1 or 2 antennas
Channel separation (min)	300 KHz
Input power (max)	150 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	2.9 dB - 4 ch. at 300 KHz spacing
	3.4 dB - 8 ch. at 300 KHz spacing
TX-to-TX isolation (typ.)	80 dB
Antenna to TX isolation (typ.)	75 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	6" diameter / 1/4 wave
Operating temperature	-30°C to +60°C
Mounting / Connectors	19" rack mount / N Female
Panel dimensions (HWD) in. (cm)	12.25 x 19 x 17 (31.1 x 48.3 x 43.2)
Weight lb. (kg)	4 ch. 60 (27.2)

M107-350-TP	300-400 MHz
M107-450-TP	400-512 MHz

M107-250, 350, 450 TP SERIES LOW LOSS TRANSMITTER COMBINER PANELS

Telewave M107-250, -350, and -450 Low Loss Combiner panels are designed for new, narrowband technologies.

All components in these field-expandable combiners are completely passive. This design allows front panel tuning, simplifies installation and maintenance, and allows for addition of channels without any disruption of service.

Each panel fits a standard 19" rack, and allows up to 4 or 6 channels. Additional channels can be added to a panel without disrupting existing users.

These combiners are shipped without racks, for mounting in existing installations. The actual height and depth of each panel can vary with frequency. Lower frequencies require longer cavities.

FEATURES

- ALL TUNING FROM THE FRONT
- 4 OR 6 CHANNELS PER PANEL INTO ONE ANTENNA
- LESS THAN 3 dB INSERTION LOSS
- MODULAR PANELS SIMPLIFY EXPANSION
- LOW COST PER CHANNEL
- FULLY FIELD TUNABLE
- 80 dB TX TO TX PROTECTION

M107 TP
4 CHANNELS

M107 TP
6 CHANNELS

SPECIFICATIONS	
Frequency ranges	200-512 MHz
Channels	4 or 6 channels into one antenna

M107-250, 350, 450 TRM SERIES EXPANDABLE LOW LOSS TRANSMITTER COMBINERS

Telewave M107-250, -350, and -450 Low Loss Combiners are designed for new, narrowband technologies. All components in these field-expandable combiners are completely passive, with the exception of the optional receiver distribution amplifier. The compact layout is enclosed in a rugged steel frame.

Optional power monitoring for each channel is available, as well as remote keying for each transmitter. The PM10C2S-1C wattmeter panel uses only 1.75" of rack space.

An optional receiver system can be built around the Telewave compact preselector series, or full-size cavities as needed. Depending on the application, a 4 or 6 cavity compact preselector may be mounted in the upper portion of a 72" or 84" rack, and a 1RU receiver panel with 8 or 16 channels.

To meet international requirements, special configurations and expansion kits are available.

FEATURES

- ALL TUNING FROM THE FRONT
- UP TO 14 TRANSMITTERS INTO ONE ANTENNA
- LESS THAN 3 dB INSERTION LOSS
- ALL CONNECTIONS AT TOP OF RACK
- COMPLETELY SELF CONTAINED
- LOW COST PER CHANNEL
- FULLY FIELD TUNABLE

Weight lb. (kg)	150 (68.1) 5 ch.

M108-450-TRM3Q SERIES

LOW LOSS UHF COMBINER

The M108-450-TRM3Q series uses up to ten 8-inch, high "Q" 3/4-wave low-loss cavities mounted on a standard 19" x 72" rack. These combiners are available in a vertical or horizontal configuration as required.

Up to 8 cavities can be mounted vertically in two groups, or up to 10 cavities can be mounted horizontally on two 5-channel panels. The vertical configuration is useful for installation in limited space or direct wall mounting. Each cavity also contains internal support for the tuner assembly specifically to enable horizontal mounting.

Optional power monitoring for each channel is available, as well as remote keying for each transmitter. The PM10C2S-1C wattmeter panel uses only 1.75" of rack space.

An optional receiver system can be built around the Telewave compact preselector series, or full-size cavities as needed. Depending on the application, the TPCP-4544 or TPCP-4546 preselector may be mounted in the upper portion of a 72" or 84" rack, and a 1RU receiver panel with 8 or 16 channels.

With new narrowband channel assignments, proper filtering is even more critical. The M108-450-TRM3Q series allows operators of high-density UHF systems to take advantage of new technology, and enhance the performance of existing systems.

M101-450-8TRM-193Q

LOW LOSS UHF COMBINER FOR CLOSE SPACING

The M101-450-8TRM-193Q is a high power, high capacity UHF combining system. The system combines up to eight transmitters using 10-inch, high "Q", 3/4-wave low-loss cavities mounted on a standard 19" x 72" rack. This design provides as much as 75 dB isolation for each transmitter, with spacing as close as 175 KHz. Each channel has a separate dual isolator, and all tuning is accessible from the front panel.

Optional power monitoring for each channel is available, as well as remote keying for each transmitter. The PM10C2S-1C metering panel uses only 1.75" of vertical rack space.

The optional receiver system is built around Telewave UHF preselectors. Depending on the application, the TPCP-4544, 4546, or 4548 preselector may be integrated directly into the upper

portion of the M101-450 84" rack. A 1RU receiver panel with 8 or 16 channels also mounts straight into the rack, preserving valuable site floor space.

With new narrowband channel assignments, proper filtering is even more critical. The M101-450-TRM193Q series allows operators of high-density UHF systems to take advantage of new technology, and enhance the performance of existing systems.

Weight lb. (kg)	150 (68.1)

M108-760-10TRM LOW LOSS 700-800 MHz COMBINER

The Telewave M108-760-TRM transmitter combiner covers 746-806 and 800-869 MHz. This combiner features 8-inch, 3/4-wave cavities for close channel spacing, and allows 700 and 800 MHz channels to be provisioned in the same rack.

Each combiner covers a single band, and is a modular unit on a 24.5-inch panel. Each 19-inch rack combines up to 10 channels into a common antenna, with optional duplexer, preselector, and receiver distribution. Individual channels are field-replaceable within the applicable band without causing downtime to other channels.

Optional power monitoring for each channel is available, as well as remote keying for each transmitter. The PM10C2S-1C wattmeter panel uses only 1.75" of rack space.

An optional receiver system can be built around the Telewave compact preselector series, or full-size cavities as needed. Depending on the application, the TPCP-7644 preselector may be mounted in the upper portion of a 72" or 84" rack, and a 1RU receiver panel with 8 or 16 channels.

Narrowband 700 MHz spectrum provides Public Safety system operators with new channels for capacity expansion. The M108-760-TRM series allows operators to flexibly deploy spectrum resources in 700 and 800 MHz bands, at new or existing sites.

SPECIFICATIONS	
Frequency ranges	746-806, 800-869 MHz
Channels	1-10 channels into 1 or 2 antennas
Channel separation (min)	250 KHz
Input power (max)	150 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	4.25 dB - 5 ch. at 250 KHz spacing 4.8 dB - 10 ch. at 250 KHz spacing
TX-to-TX isolation (typ.)	80 dB
Antenna to TX isolation (typ.)	75 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	8" diameter / 3/4 wave
Operating temperature	-30°C to +60°C
Mounting / Connectors	19" rack mount / N Female
Panel dimensions (HWD) in. (cm)	24.5 x 19 x 16 (62 x 48.3 x 40.6)
Weight lb. (kg)	150 (68.1)

M106-860-5TP/10TP COMPACT EXPANDABLE TRUNKING COMBINER PANELS

The Telewave M106-860 Compact Trunking Combiner is an industry leader for excellence in low-loss combiner technology.

The completely passive combining technique with front panel tuning access simplifies installation and maintenance, and allows for the addition of new channels without any disruption of service.

Each combiner panel is field expandable up to five channels. Additional pre-tuned combiner panels can be added at any time. Valuable site space is conserved when using efficient Telewave combiners.

The modular building-block construction means no specialized test equipment is required.

The advanced mechanical design of Telewave high "Q" cavities assures maximum long-term system performance.

Heavy duty 19" racks, duplexers, and receiver multicoupler systems are available as upgrades.

CLOSE-UP OF REAR PANEL (10 CH.)

SPECIFICATIONS	
Frequency range	851-869 MHz
Channels	1-10 channels into 1 or 2 antennas
Channel separation (min)	500 KHz
Input power (max)	100 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	2.0 dB - 5 ch. at 1 MHz spacing 3.2 dB - 10 ch. at 500 KHz spacing
TX-to-TX isolation (typ.)	80 dB
Antenna to TX isolation (typ.)	65 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	6" diameter / 1/4 wave
Operating temperature	-30°C to +60°C
Mounting / Connectors	19" rack mount / N Female
Panel dimensions (HWD) in. (cm)	12.25 x 19 x 17 (31 x 48.3 x 43.2)
Weight lb. (kg)	75 (34) 5 ch.

M107-860-5TRM-HP, 10TRM-HP COMPACT HIGH POWER TRUNKING COMBINER

The Telewave M107-860-5TRM-HP Low Loss High Power Combiner is designed for trunking applications up to 175 watts per channel, with up to 10 channels per rack.

The combiner uses 7-inch, $\frac{3}{4}$ wave cavities, and channel expansion or maintenance can be performed without disruption of the system. RF power metering is switchable for forward and reverse directions for each transmitter and antenna. Convenient remote transmitter keying is included on the RF wattmeter panel.

All high power trunking combiners are shipped in a 19" x 72" Rack, with power monitoring, wattmeter panel with remote keying, 175 watt isolator, and -50 dB sampler on 2nd stage isolator load port (75 watt load). Input connectors are N Female and output is 7-16 DIN-F. Standard cabling is high-temp RG-393.

FEATURES

- FIELD TUNABLE
- 10 TRANSMITTERS INTO ONE ANTENNA
- POWER MONITORING FOR ALL CHANNELS AND ANTENNA
- -50 dB RF OUTPUT POWER SAMPLER - EACH CHANNEL

OPTIONS

- RECEIVER PANEL - 1RU
- 500 WATT DUPLEXER - 15 MHz PASSBAND w/ 7-16 DIN
- RG-393 PHASING HARNESS WITH 7-16 DIN CONNECTORS FOR (2) 5-CHANNEL PANELS
- HIGH POWER 5-WAY 7-16 DIN JUNCTION

SPECIFICATIONS

Frequency range	851-869 MHz
Channels	1-10 channels into 1 or 2 antennas
Channel separation (min)	250 KHz
Input power (max)	175 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	2.2 dB - 5 ch. at 1 MHz spacing 4.25 dB - 5 ch. at 250 KHz spacing 3.2 dB - 10 ch. at 500 KHz spacing

M101-860-10TRM LOW LOSS 800 MHz COMBINER

The Telewave M101-860 Trunking Combiner is an industry leader in low-loss combiner technology. Ease of installation and maintenance is accomplished by front panel tuning.

These trunking combiners are complete packages, including 19" x 72" rack or heavy duty steel cabinet with front and rear locking doors, receiver distribution system, preselector, and power monitoring system.

The completely passive combining technique allows for maintenance and addition of channels without disruption of the system.

Valuable site space is conserved when using efficient Telewave designed combiners, and RF power metering is a standard feature. All forward and reverse power measurements are switchable for each transmitter and antenna.

Convenient remote transmitter keying is included on the RF wattmeter panel.

All rack-mount five channel combiners are field expandable to 10 channels by the addition of pre-tuned combiner panels. The modular building-block construction means no specialized test equipment is required.

The advanced mechanical design of the Telewave 8-inch high "Q" cavities assures maximum long-term system performance. All cables are easily accessible from the front panel.

SPECIFICATIONS	
Frequency range	806-869 MHz
Channels	1-10 channels into 1 or 2 antennas
Channel separation (min)	500 KHz (250 KHz with 3Q cavities)
Input power (max)	150 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	2.0 dB - 5 ch. at 1 MHz spacing 3.2 dB - 10 ch. at 500 KHz spacing
TX-to-TX isolation (typ.)	85 dB
Antenna to TX isolation (typ.)	80 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	8" diameter / 1/4 wave
Operating temperature	-30°C to +60°C
Mounting / Connectors	19" rack mount / N Female
Panel dimensions (HWD) in. (cm)	24.5 x 19 x 16 (62 x 48.3 x 40.6)
Weight lb. (kg)	75 (34) 5 ch.

TRANSMITTER COMBINERS

TC860 CERAMIC ENHANCED TRUNKING COMBINER

The Telewave Ceramic Enhanced 860 MHz Trunking Combiner brings ceramic technology to trunking system operators. The TC860 combiner requires only 7 inches of rack space, and the 4" ceramic cavities provide the same performance as conventional, eight-inch $\frac{3}{4}$ -wavelength cavities. The Telewave Ceramic Enhanced combiner is the best choice when site space is at a premium.

Ceramic Enhanced Resonators allow combining of channels as close as 250 KHz with reasonable insertion loss. Fully temperature compensated components ensure frequency stability throughout the entire temperature range. The unique design also allows the cavity to be tuned under the full 80 watts of input power.

To fully complement this compact combiner, the optional PM10C2S-1C wattmeter panel requires only 1 rack unit of panel space. The wattmeter panel provides convenient transmitter keying and continuous monitoring of combiner performance. If per-channel monitoring is required, additional power monitors are typically mounted on a separate 2RU panel.

The TC860 combiner is field expandable to 10 channels with pretuned expansion kits. This building block concept allows the installation of new channels without the need for specialized test equipment.

SPECIFICATIONS

Frequency range	851-869 MHz
Channels	1-5 channels into 1 antenna
Channel separation (min)	250 KHz
Input power (max)	80 watts per channel
Impedance / Input VSWR (typ.)	50 ohms / 1.25:1
Insertion loss per ch. (typ.)	2.2 dB - 5 ch. at 1 MHz spacing 2.8 dB - 5 ch. at 500 KHz spacing 3.2 dB - 5 ch. at 250 KHz spacing
TX-to-TX isolation (typ.)	80 dB
Antenna to TX isolation (typ.)	70 dB
2nd harmonic suppression (typ.)	90 dB
Cavity size	4" diameter ceramic / 1/4 wave
Operating temperature	-0°C to +50°C
Mounting / Connectors	19" rack mount / N Female

Weight lb. (kg)	36 (16.3) 5 ch.

TW860-2HRB1, TW860-4HRB1

COMPACT HYBRID COMBINERS

TW860-2HRB1

TW860-4HRB1

Telewave Compact Hybrid Combiners allow transmitter combining with close frequency spacing that is not practical for cavity-ferrite combiners. Combining adjacent channels is possible, even two transmitters on the same frequency. The TW860-2HRB1 and 4HRB1 will handle 2 or 4 channels respectively, with reasonable insertion loss.

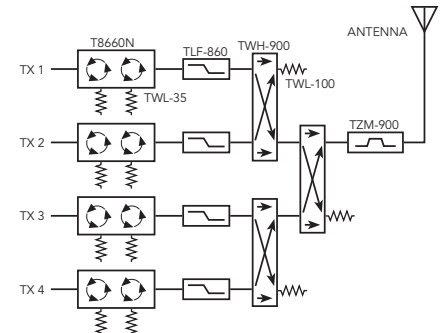

These compact combiners provide high performance in a very small space. Both combiners occupy only two rack units each (3.5") of vertical space on a 19" rack. Each combiner is a broadband device, and is pretuned for 800 MHz SMR/ESMR, Trunking, or NPSPAC.

No additional tuning is required during installation. A harmonic

filter on each channel removes any spurious products.

The TW860-2HRB1 and -4HRB1 operate as stand-alone devices, and can be integrated into any standard Telewave cavity/ferrite system to provide maximum flexibility in frequency assignment. Contact our System Engineering Department for custom integration, and high power applications.

M108-900-10TRM3Q

LOW LOSS 900 MHz COMBINER

The Telewave M108-900-TRM transmitter combiner covers 896-941 MHz. This combiner features 8-inch, $\frac{3}{4}$ -wave cavities for close channel spacing.

Each combiner covers the full band, and is a modular unit on a 24.5-inch panel. Each 19-inch rack combines up to 10 channels into a common antenna, with optional duplexer, preselector, and receiver distribution. Individual channels are field-retunable without causing downtime to other channels.

Optional power monitoring for each channel is available, as well as remote keying for each transmitter. The PM10C2S-1C wattmeter panel uses only 1.75" of rack space.

An optional receiver system can be built around the Telewave compact preselector series, or full-size cavities as needed. Depending on the application, the TPCP-8644

preselector may be mounted in the upper portion of a 72" or 84" rack, and a 1RU receiver panel with 8 or 16 channels.

The M108-900-TRM3Q series provides a new option for 900 MHz system operators to deploy systems with standard spacing and normal insertion loss.

SPECIFICATIONS	
Frequency range	896-941 MHz
Channels	1-10 channels into 1 or 2 antennas
Channel separation (min)	250 KHz

M101-900-10TRMH HIGH CAPACITY 900 MHz HYBRID COMBINER

The Telewave 900 MHz Hybrid Trunking Combiner is the industry leader for excellence in hybrid combiner technology. This design allows any transmitter frequency spacing, even transmitters on the same frequency for hot standby.

The passive combining design reduces maintenance requirements, and allows simple reconfiguration of antennas to meet system coverage requirements.

The rack mount ten-channel combiners are field expandable to twenty channels. Expansions are accomplished by the addition of the pre-tuned duplexer cavity panels. Modular building block construction means no specialized test equipment is required. All components are easily accessible from the back of the rack.

The M101-900 combiner systems are priced as a complete transmitter combining package, with a 19" steel rack, receiver distribution system with preselector, sideband filters as needed, and power monitoring.

RF power metering is a standard feature. All forward and reverse power measurements are switchable for each transmitter. Up to five antennas can be monitored for VSWR. Convenient remote transmitter keying is included on the wattmeter panel.

The advanced design of the Telewave hybrid combiner assures maximum long-term system performance. Special high power combiners up to 250 watts are available upon request.

M101-900-15TRM

TRANSMITTER COMBINER		RECEIVER SYSTEM	
Frequency range	896-941 MHz	Frequency range	896-941 MHz

Note: Add 0.4 dB for each isolator, duplexer or sideband filter.			

BANDPASS/NOTCH COMBINERS

1 NOTCH, 1-3 PASS CAVITIES

Telewave Pass-Notch Combiners offer excellent performance, and several unique characteristics. Additional frequencies can be added without retuning the entire system. Installation is simplified and off-air time is minimized. Splitting of transmitter and receiver systems is not necessary.

Each combiner consists of a 8" diameter notch cavity and one to three 8" pass cavities. A cavity-mounted dual isolator is recommended to suppress intermodulation and third harmonics. The notch cavity performs the function of a steering

device to maintain proper energy flow in the combining network. The pass cavities form a highly selective filter which effectively isolates each node. The nodes are arranged in ascending order, with the highest frequency nearest the antenna.

HYBRID COMBINERS 2 OR 4 CHANNELS

Telewave Hybrid Combiners allow transmitter combining with close frequency spacing that is not practical for cavity-ferrite combiners. Combining adjacent channels is possible, even two transmitters on the same frequency. These combiners are configured in sets of two or four channels, and maintain reasonable insertion losses.

Telewave hybrid combiners use a minimal amount of 19" rack space. Two channel units require 5.25" rack space, and 10.5" for each four channel combiner. There is no tuning required during installation. Each channel is equipped with a harmonic filter to remove any spurious products.

The basic hybrid design can also be integrated into any standard Telewave cavity-ferrite combiner system to provide outstanding flexibility in frequency selection. High power is available in all frequency bands. Contact Telewave for custom integration and applications above 150 watts.

RECEIVER MULTICOUPLERS

Receiver Distribution Panels

Receiver Distribution Panels feed multiple receivers from a single antenna, with isolation between each output port. An integral preamplifier compensates for signal losses in the splitters and long cable runs.

Compact Distribution Panels

Compact Receiver Panels provide 8 or 16 outputs in 1RU (1.75"), and 24 or 32 channels in 2RU (3.5"). This allows RX distribution capability in the same rack as a multi-channel combiner and preselector.

Receiver Power Splitters

Power splitters divide a low-level signal and distribute it to multiple outputs with isolation between each port. Antenna ports are tuned with a matching network to insure balanced input.

Preamplifiers - Bipolar / PHEMT

Preamplifiers amplify low-level signals and can improve the noise figure of a receiver system. Bipolar preamps are very rugged and resistant to input overload. PHEMT devices provide a low noise figure and redundant circuitry.

Tower Top Preselectors

A tower-top preselector improves the noise figure of a receiver system by filtering and amplifying the received signal at the antenna, before cabling losses. Coupling devices transfer DC power up the tower via the feedline.

Base Station Preselectors

A preselector protects a receiver or group of receivers by filtering out all signals that are not within the operating frequency band. Multi-window preselectors cover more than one segment within a band. Square cavities allow very compact designs for efficient rack layout.

TWR2, TWR4 SERIES RECEIVER DISTRIBUTION PANELS

TWR2 SERIES

TWR4 SERIES

Telewave TWR2 and TWR4 Receiver Distribution Panels provide 2 or 4 isolated 50 ohm receiver outputs from one input, in a compact package. The antenna port is tuned with a matching network to insure a balanced input. A high-gain TLA-

series preamp and multi-voltage AC power supply are included on a single 5.25" panel. The preamp can also be powered directly from a DC source.

Telewave receiver panels use high-quality splitters which provide

multiple balanced outputs from one input, with 20-30 dB of isolation between ports.

NOTES

1. All unused ports must be terminated with 50 ohms. TWL-01 terminating resistor is available for this purpose.
2. Panel gain is measured from the input port to any output port. Gain is adjusted at the factory according to individual system requirements.
3. Tuning range and bandwidth vary depending on frequency band and system components.
4. Exact frequencies must be specified with order.

TWR8, TWR16, TWR24 SERIES RECEIVER DISTRIBUTION PANELS

MULTICOUPLERS

TWR8 SERIES

TWR16 SERIES

Telewave Receiver Distribution Panels are used to feed multiple receivers from a common antenna, reducing cost and tower loading, while providing consistent signal quality, output isolation, and higher output levels.

A typical receiver distribution panel includes a power supply, inline low noise preamplifier, and one or two 8-way splitters all on a single 19" panel. The preamplifier provides as much as +18 dB system gain to overcome splitting and cable losses.

Telewave receiver panels are fully shielded, and each panel has sufficient bandwidth to cover an entire commercial or Public Safety band. Standard panels have one input, 8 or 16 outputs, and a -20 dB sample port on a 7" x 19" panel. A 24 channel model is available for 700/800 MHz only. For sites with limited rack space, the Telewave 1R and 2R series of compact panels is also available with 8 or 16 channels in 1 rack unit (1.75" H), or up to 32 channels on a 3.5" panel.

Additional panels may be added at any time to increase the number of available outputs. New panels can be directly coupled to existing panels without additional parts or tuning. Successful multicoupling generally requires some type of filtering between the receiver panel and antenna. Telewave manufactures a wide range of high quality preselector systems for transmitters and receivers.

Telewave receiver panels provide 8 or 16 matched 50 ohm outputs from one input, with typical 25 dB isolation between ports. The antenna port is tuned with a matching network to insure a balanced input. A -20 dB sample port is also provided for connection of external signal analyzers.

Telewave can supply panels for operation on +12 to +24 VDC, and 120 or 220/240 VAC. Other voltage options are available on request. A battery backup on the DC input can provide uninterrupted operation during a site power failure (charging output not supplied). Tuning range

and bandwidth varies depending on frequency band and system components. Please contact Telewave to discuss your requirements with a sales engineer to ensure maximum system performance.

NOTES

1. All unused ports must be terminated with 50 ohms. TWL-01 terminating resistor is available for this purpose.
2. Panel gain is measured from the input port to any output port. Gain is adjusted at the factory according to individual system requirements. Standard gain is 6 dB if not specified.
3. Tuning range and bandwidth vary depending on frequency band and system components.
4. Exact frequencies and system gain must be specified with order.

COMMON SPECIFICATIONS	
Impedance / VSWR (typ)	50 ohms / 1.3:1

COMPACT RECEIVER PANELS

- FEATURES**
- 25 dB TYPICAL PORT TO PORT ISOLATION
 - N OR BNC OUTPUT
 - 0.7 TO 2.5 dB TYPICAL NOISE FIGURE
 - MODULAR DESIGN
 - VHF-LOW/HIGH, UHF, 700/800/900 TRUNKING
 - NO TUNING REQUIRED
 - 1 RACK UNIT (1.75" x 19")
 - 24 AND 32 CHANNELS AVAILABLE IN 2 RU

TWR16-450-1R

MULTICOUPLERS

Telewave Compact Receiver Distribution Panels are used to feed multiple receivers from a common antenna, reducing cost and tower loading, while providing consistent signal quality, output isolation, and higher output levels.

A typical receiver distribution panel includes a power supply, inline low noise preamplifier, and one or two 8-way splitters all on a single 19" tray. The preamplifier provides as much as +18 dB system gain to overcome splitting and cable losses.

Telewave 1R panels provide full performance in only 1RU. The 8 channel unit can be easily field expanded to 16 channels, by adding an additional 8 channel splitter. All receiver panel components are fully shielded, and each panel has sufficient bandwidth to cover an entire commercial or Public Safety band.

New panels can be directly coupled to existing panels without additional parts or tuning. Successful multicoupling generally requires some type of filtering between the receiver panel and antenna. Telewave manufactures a wide range of high quality preselector systems for transmitters and receivers.

Telewave receiver panels use high-quality splitters to provide 8 or 16 matched 50 ohm outputs from one input, with typical 25 dB isolation between ports. The antenna port is tuned with a matching network to insure a balanced input.

These units, with their specially designed power supply, can be powered from an AC or DC source. The internal DC input circuitry will allow the external input DC voltage to vary between +11.5 VDC to +15 VDC, while keeping the DC output voltage constant. This feature allows the preamplifier to perform at its rated gain, 1 dB compression point, and 3rd order intercept point.

This design is especially suited for battery, solar panels, and thermal generator sources. An external DC-DC converter allows operation from DC inputs as low as +9.5 VDC.

The 1R series ships standard with an inline low noise bipolar preamplifier (except TT models). Optional items include PHEMT preamps for lower noise figure, high 3rd order intercept preamps for RF congested sites, redundant preamps for maximum reliability at remote sites, and broadband preamps for multi-band applications.

TWR32-150-2R

Telewave 2R Compact Receiver Distribution Panels are used at medium to high density sites to feed multiple receivers from a common antenna, reducing cost and tower loading, while providing consistent signal quality, output isolation, and higher output levels.

A typical receiver distribution panel includes a power supply, inline low noise preamplifier, and three or four 8-way splitters all on a single 19" tray. The preamplifier provides as much as +12 dB system gain to overcome splitting and cable losses.

Telewave 2R panels provide full performance in only 2RU. All receiver panel components are fully shielded, and each panel has sufficient bandwidth to cover an entire commercial or Public Safety band.

New panels can be directly coupled to existing panels without additional parts or tuning. Successful multicoupling

generally requires some type of filtering between the receiver panel and antenna. Telewave manufactures a wide range of high quality preselector systems for transmitters and receivers.

Telewave 2R Receiver Panels use high-quality splitters to provide 24 or 32 matched 50 ohm outputs from one input, with typical 25 dB isolation between ports. The antenna port is tuned with a matching network to insure a balanced input.

These units, with their specially designed power supply, can be powered from an AC or DC source. The internal DC input circuitry will allow the external input DC voltage to vary between +11.5 VDC to +15 VDC, while keeping the DC output voltage constant. This feature allows the preamplifier to perform at its rated gain, 1 dB compression point, and 3rd order intercept point.

This design is especially suited for battery, solar panels, and thermal generator sources. An external

DC-DC converter allows operation from DC inputs as low as +9.5 VDC.

The 2R series ships standard with an inline low noise bipolar preamplifier (except TT models). Optional items include PHEMT preamps for lower noise figure, high 3rd order intercept preamps for RF congested sites, redundant preamps for maximum reliability at remote sites, and broadband preamps for multi-band applications.

PS- SERIES RECEIVER POWER SPLITTERS

Telewave Receiver Power Splitters provide 2 to 8 matched 50 ohm receiver outputs from one input. The antenna port is tuned with a matching network to insure a balanced input.

Since the input signal is split evenly between all ports, the available signal at each output port will be 3 to 9 dB below the input. For this reason, a preamp is generally used

to compensate for coupler and cable losses.

These rugged, compact splitters are commonly used in RX multicouplers, and are not intended to be used with transmitters. Telewave makes a full line of transmitter power dividers with 500 watt power capability for this purpose.

TLA SERIES

LOW NOISE BIPOLAR INLINE PREAMPLIFIERS

FEATURES

- 50 OHM INPUT/OUTPUT
- OVER-VOLTAGE/POLARITY PROTECTION
- VERSATILE MOUNTING OPTIONS
- HIGH THIRD ORDER INTERCEPT
- RESISTANT TO INPUT OVERLOAD

Telewave TLA Series in-line preamplifiers use surface-mount bipolar devices to amplify low level RF signals by up to 34 dB. The primary application of these preamplifiers is to improve the noise figure of a receiver system. Preamps compensate for splitter insertion loss or losses from long coax cable runs, and increase signal levels to spectrum analyzers or other test equipment.

Each preamplifier is housed in a rugged, custom made, RF-tight aluminum enclosure. The DC input is reverse polarity protected, and equipped with a high-pass filter to eliminate RFI. Preamplifiers are tuned to customer specified center frequencies.

COMMON SPECIFICATIONS

Impedance / VSWR (max)	50 ohms / 1.3:1
Noise figure (typ)	2.5 dB
Gain (factory adjusted)	30-88 MHz: +8 to +34 dB
(Standard gain is 16 dB +/- 1 dB)	132-512 MHz: +6 to +28 dB
	760-960 MHz: +6 to +21 dB
1 dB compression (typ)	+25 dBm
3rd order intercept (typ)	+35 dBm
Power requirements	+12 to +24 VDC, 170 mA
Transient protection	20 kV / 1 μ s
Temperature range	0°C to +40°C
Enclosure	Gold or clear alodine
Hardware	Stainless steel
Connectors	N Female (SMA, BNC opt.)
Dimensions (HWD) in. (cm)	1.3 x 2.25 x 2.0 (3.3 x 5.7 x 5.1)
Footprint in. (cm)	3.25 x 2.25 (8.3 x 5.7)
Net weight oz (g)	3.8 (108)
Shipping weight lb. (kg)	1 (0.45)

TLA760-12	763-824 MHz	50 MHz
TLA860-12	806-960 MHz	50 MHz

NOTE: These preamplifiers are for receiver use only. They are not designed to accept transmitter power levels.

TGA SERIES PHEMT PREAMPLIFIERS

FEATURES

- VERY LOW NOISE
- 50 OHM INPUT/OUTPUT
- OVER-VOLTAGE / POLARITY PROTECTION
- VERSATILE MOUNTING OPTIONS
- COMMON PORT INDUCTANCE

Telewave TGA Series in-line preamplifiers utilize PHEMT devices to amplify low-level RF signals by up to 18 dB. The primary application of these preamplifiers is to improve the noise figure of a receiver system. Preamps compensate for splitter insertion loss or losses from long coax cable runs, and increase signal levels to spectrum analyzers or other test equipment.

Each preamplifier is housed in a rugged, custom made, RF-tight aluminum enclosure. The DC input is reverse polarity protected, and equipped with a high-pass filter to eliminate RFI.

NOTE: These preamplifiers are for receiver use only. They are not designed to accept transmitter power levels.

TWR1 SERIES RACK MOUNT PHEMT PREAMPLIFIERS

The TWR-1 Series of Rack Mount PHEMT Preamplifiers provide up to +18 dB of user-controllable gain in a receiver system. These preamps provide extra gain to compensate for loss of signal from tower extension, receiver filtering, or long cable runs. Each unit consists of a low-noise PHEMT preamplifier, a 10 dB rotary step attenuator, and a regulated switching power supply mounted on a 19-inch single

rack-unit aluminum panel. Primary input power is 120 or 220 VAC, and DC backup requires +11 to +15 VDC. The DC input is reverse polarity protected, and equipped with a high-pass filter to eliminate RFI. Standard gain is +1 to +11 dB. Any range between +1 to +11 and +8 to +18 dB may be specified, depending on frequency.

NOTE: These preamplifiers are for receiver use only. They are not designed to accept transmitter power levels.

TOWER TOP PREAMPLIFIERS WITH INTEGRATED PRESELECTORS

Telewave Integrated Tower Top Preamplifier systems recover low-level signals from long or high loss transmission lines and optimize system performance. The Telewave system allows single, multi-band and/or multi-window operation in the 300-400, 400-512, 793-824, and 806-901 MHz receiver bands.

The RF preamplifier is designed with two PHEMT devices in a redundant hybrid configuration. A single device failure causes a 6 dB reduction in gain, but the amplifier continues to operate with stable impedance. This provides high operational reliability. Very low loss input circuits provide the best possible noise figure. DC surge and reverse voltage protection is provided.

The preselector filter systems incorporate combine, cavity and multi-window technologies.

TTPA-3548 Tower Top Preamplifier/Preselector

Each filter is custom designed to operate in the most adverse RF environments.

The base power supply provides DC coupling and decoupling to the transmission line and connection to the receiver distribution system.

DC current levels are monitored with a built-in metering panel.

The enclosure is fully weather-sealed, compliant with NEMA 4.

ELECTRICAL SPECIFICATIONS			
Frequency ranges	300-512, 793-824, 896-901 MHz		
System gain (max, single band)	17 dB (factory adjusted)		
3rd order intercept (typ)	+40 dB		
Noise figure (typ)	0.8 dB		
VSWR	1.3:1		
Lightning protection	Impulse suppressor (Polyphaser)		
Power requirements	+15 VDC / 280 mA (+12 VDC opt.)		
Temperature range	-40°C to +70°C		
MECHANICAL SPECIFICATIONS		Dimensions (HWD) in. (cm)	Weight lb. (kg)
Tower box	TTPA-4586	24 x 20 x 12 (61 x 51 x 31)	39 (17.7)

Finish	Tower box	NEMA 4 - Gray polyester powder coat	
	Base supply	Grained aluminum	
Connectors	N Female		

TTPA-4544

TOWER TOP PREAMPLIFIER / PRESELECTOR

Telewave Integrated Tower Top Preamplifier systems recover low-level signals from long or high loss transmission lines and optimize system performance. The Telewave system enables single or multi-window operation in the 450-512 MHz receiver bands.

The RF preamplifier is designed with two PHEMT devices in a redundant hybrid configuration. A single device failure causes a 6 dB reduction in gain, but the amplifier continues to operate with stable impedance. This provides high operational reliability. Very low loss input circuits provide the best possible noise figure. DC surge and reverse voltage protection is provided.

The preselector filter systems incorporate combine, cavity and multi-window technologies.

TTPA-4544 Towntop Preamplifier

Each filter is custom designed to operate in the most adverse RF environments.

The base power supply provides DC coupling and decoupling to the transmission line and connection to the receiver distribution system.

DC current levels are monitored with a built-in metering panel.

The enclosure is fully weather-sealed, compliant with NEMA 4.

ELECTRICAL SPECIFICATIONS		
Frequency ranges (MHz)		455-460, 465-470, 470-512

Optional sampling port available, connected to input of preselector for tower-top effective sensitivity measurements. Requires extra coax run.

MULTICOUPLERS

TTBS-4586

TOWER TOP BASE POWER SUPPLY

The Telewave TTBS-4586 Base Power Supply provides up to 1 amp of regulated DC power for any Telewave tower mounted preamp.

The TTBS-4586 is designed around a custom power supply, which supplies +15 VDC to the preamp via the coax cable. Voltage is coupled to the transmission line by a Polyphaser GX series impulse suppressor, which incorporates a DC power injector.

The Base Power Supply accepts AC or optional DC input, or both, depending on system requirements. A built-in DC-DC converter allows DC input up to 75 VDC. The panel requires a 3.5" x 19" rack space, and includes a 1 amp current meter.

The optional TCMA-300 current monitor and alarm panel provides adjustable high and low current trip points with form "C" contact closure and LED status alarm.

A front panel step attenuator is also available.

ELECTRICAL SPECIFICATIONS	
AC input voltage	100-240 VAC, 50-60 Hz / 0.4 A
DC output voltage (to tower unit)	+15 VDC / 1A
Stand by dc input voltage (opt)	+/- 9-18, 18-36, or 36-75 VDC
Input / output VSWR	<1.3:1
Lightning protection	Impulse suppressor, 20 kA
Temperature range	-40°C to +70°C
MECHANICAL SPECIFICATIONS	
Dimensions (HWD) in. (cm)	3.5 x 19 x 7.25 (8.9 x 48.3 x 18.4)
Weight lb. (kg)	4.7 (2.1)
RF Connectors	N-female
Finish	Grained aluminum, clear alodine
Optional front panel	Black paint

TPCP-1342C / TPCP-1343C

COMPACT VHF AIRBAND PRESELECTORS

TPCP-1342C

TPCP-1343C

The TPCP-1342C and TPCP-1343C offer high performance in a compact design for the VHF Air band. A custom extruded 4-inch square cavity allows horizontal mounting on a standard 19-inch rack, with rack height of 5.25".

The TPCP-1342C uses two cavities to provide typical attenuation of better than 50 dB at +/- 5 MHz. The TPCP-1343C uses three cavities, and provides typical attenuation of better than 70 dB.

TPCP-1714	170-180 MHz

TPCP-1414, -1514, -1614, -1714 COMPACT VHF PRESELECTORS

The TPCP-1414, -1514, -1614, and -1714 are very compact, 4-cavity preselectors for the VHF band from 140-180 MHz. These preselectors produce a minimum of 45 dB attenuation, and are ideal for limited space applications, including portable repeaters and mobile installations.

Simple mounting to any flat surface allows maximum flexibility. Each model covers a 10 MHz tuning range.

SPECIFICATIONS - TPCP-1414, 1514, 1614, 1714

TPCP-1554, -1556 BANDPASS PRESELECTOR

Telewave TPCP-1554 and TPCP-1556 preselectors are specially designed for use with master receive systems to insure rejection of external noise sources. These bandpass preselectors provide optimum receiver desense protection when installed between a receiver multicoupler and the antenna. In addition, their high power capability allows these units to be used as sideband filters on the outputs of transmitters or transmitter combiners.

Bandpass preselectors reject all signals outside a selected pass window, and are often preferred at congested sites.

These bandpass filters consist of 4 or 6 series-connected cavities, and are available in a wide range of pass bandwidths. Each model features "sharp-skirt" selectivity with minimum insertion loss. For optimum performance, these bandpass filters are custom tailored to meet individual requirements. Multiple-window configurations can be provided when more than one pass band is required.

Heavy duty materials are used throughout these bandpass filters to insure top performance and long life, and RG214 Mil-Spec cable is used for interconnections. Temperature stability is maintained from -30 to +70°C by the use of temperature compensators, and threaded invar rod. Tuners are silver plated and sliding contacts are made with beryllium copper fingerstock. All models are 19" rack-mountable, and come with N Female connectors.

All units are factory tuned to customer-supplied frequencies and no further adjustment should be necessary. Field re-tuning or adjustment of insertion loss can be accomplished quickly if needed.

TPCP-4542 BANDPASS PRESELECTOR

The Telewave TPCP-4542 UHF receiver preselector is specially designed for use in master antenna receive systems, to insure rejection of external noise sources. This bandpass preselector provides optimum protection against desense and adjacent channel interference when installed between the receiver multicoupler and antenna. High power capability also allows these units to be used as sideband filters on the outputs of transmitters or transmitter combiners.

Bandpass preselectors reject all signals outside a selected pass window, and are often preferred at congested sites.

Heavy-duty materials are used throughout this bandpass filter to insure top performance and long service. RG-214 Mil-Spec cable is used for the interconnect, and temperature stability is maintained by the use of a threaded invar tuning rod. Tuners are all silver-plated, and sliding contacts are manufactured from beryllium copper fingerstock. This unit is 19" rack mounted, and comes with N Female connectors standard.

All units are factory tuned to customer-supplied frequencies and no further adjustment should be necessary. Field re-tuning or adjustment of insertion loss can be accomplished quickly if needed.

SPECIFICATIONS - TPCP-4542	
Frequency range	400-512 MHz
Bandpass (max)	1 MHz or less
Attenuation at +/- 5 MHz	35 dB
Insertion loss (typ)	1.0 dB
Power input (max)	350 watts
Impedance (nom) / VSWR (max)	50 ohms / 1.5:1
Temperature range	-30°C to +70°C
Number of cavities / size	2 / 4"
Connectors	N Female
Dimensions (HWD) in. (cm)	5.25 x 19 x 10.5 (13.3 x 48.3 x 26.5)
Mounting	19" rack mount
Finish	Alodine / Gray acrylic enamel
Net weight lb. (kg)	5 (2.3)
Shipping weight lb. (kg)	8 (3.6)

TPCP-4544, -4546, -4548 UHF BANDPASS PRESELECTOR

Telewave TPCP-4544, 4546, and 4548 UHF Bandpass Preselectors are specially designed for use with master receive systems, to ensure rejection of external noise sources. These bandpass preselectors provide optimum receiver desense protection when installed between the receiver multicoupler and the antenna. Their high power capability also allows these units to be used as sideband filters on the outputs of transmitters or transmitter combiners.

Bandpass preselectors reject all signals outside a selected pass window, and are often preferred at congested sites.

These bandpass filters consist of 4, 6, or 8 series-connected cavities, and are available in a wide range of pass bandwidths. Each model features "sharp-skirt" selectivity with minimum insertion loss. For optimum performance, these bandpass filters are custom tailored to meet individual requirements. Multiple-window configurations can be provided when more than one pass band is required.

Heavy duty materials are used throughout the bandpass filters to insure top performance and long life, and RG-214 Mil-Spec cable is used for interconnections. Temperature stability is maintained from -30 to +70°C by the use of temperature compensators, and threaded invar rod. Tuners are silver plated and sliding contacts are made with beryllium copper fingerstock. All models are 19" rack-mountable, and come with N Female connectors.

All units are factory tuned to customer-supplied frequencies and no further adjustment should be necessary. Field re-tuning or adjustment of insertion loss can be accomplished quickly if needed.

TPCP-46215	465-470 MHz
TPCP-45215-2	455-470 MHz

TPCP-45215 / 46215 / 45215-2 UHF COMBLINE PRESELECTORS

Telewave TPCP-45215/46215 single and TPCP-45215-2 dual window combline preselectors are specially designed for use with master receive systems, to optimize performance on UHF repeater frequencies, and provide excellent rejection of external noise sources. These combline filters provide maximum protection from receiver desense when installed between the receiver multicoupler and the antenna.

The 45215 and 46215 combline filters have a bandpass of 4 MHz, and consist of a series of resonators in a compact enclosure, mounted on a standard 5.25" x 19" panel. The 45215-2 provides two 4 MHz windows on a 10.5" x 19" panel. These units feature "sharp-skirt" selectivity with minimum insertion loss in single or dual configuration. All units are pre-tuned to customer-specified frequencies before shipment to provide optimum performance, and no further adjustment should be necessary.

Telewave combline filters offer the ultimate in repeater system performance, maximizing coverage and providing protection against receiver desensitization at congested sites. With new narrowband channel assignments, proper filtering is even more critical. The TPCP-45215 series allows operators of high-density UHF systems to take advantage of new technology, and enhance the performance of existing systems.

TPCP-4514 COMPACT UHF PRESELECTOR

The TPCP-4514 is an ultra-compact, 4-cavity preselector for the UHF band from 450-470 MHz. This preselector produces a minimum of 30 dB attenuation, and is ideal for limited space applications, including portable repeaters and mobile installations.

Simple mounting to any flat surface allows maximum flexibility. The TPCP-4514 covers a 20 MHz tuning range.

SPECIFICATIONS - TPCP-4514	
Frequency range	450-470 MHz

TPCP-8642, TPCP-8644 BANDPASS PRESELECTORS

Telewave TPCP-8642 and 8644 Bandpass Preselectors are specially designed for use with 800 MHz receiver systems to insure rejection of external noise sources. These bandpass preselectors provide optimum receiver desense protection when installed between the receiver multicoupler and the antenna. Their high power capability allows these units to be used as sideband filters on the outputs of transmitters or transmitter combiners.

Bandpass preselectors reject all signals outside a selected pass window, and are often preferred at congested sites.

These bandpass filters are available with up to a 5 MHz pass bandwidth, and they consist of 2 or 4 series-connected cavities. Each model features "sharp-skirt" selectivity with minimum insertion loss. For optimum performance, these bandpass filters are custom tailored to meet individual requirements.

Multiple-window configurations can be provided when more than one pass band is required. All units are factory tuned to customer-supplied frequencies and no further adjustment should be necessary.

Heavy duty materials are used throughout these bandpass filters to insure top performance and long life, and only RG214 Mil-Spec cable is used for interconnections. Temperature stability is maintained from -30 to +70°C by the use of temperature compensators, and threaded invar rod. Tuners are silver plated and sliding contacts are made with beryllium copper

fingerstock. All models are 19" rack-mountable, and come with N Female connectors.

TTPP-8642 BANDPASS / BANDREJECT PRESELECTOR

The Telewave Model TTPP-8642 Bandpass-Bandreject Preselector is designed for use with master receive systems to insure rejection of external noise sources. The TTPP-8642 utilizes an exclusive "side-by-side" coupling technique which produces a 5 MHz bandpass, and a reject characteristic at 45 MHz above the passband.

This provides optimum receiver protection when installed between a receiver multicoupler and the antenna. High power capability also allows these units to be used as sideband filters on the outputs of transmitters or transmitter combiners.

These filters cover a 5 MHz pass bandwidth, and they consist of 2 series-connected cavities. They feature "sharp-skirt" selectivity with minimum insertion loss. All units are factory tuned to customer-supplied frequencies and no further adjustment should be necessary.

Heavy duty materials are used throughout these bandpass filters to insure top performance and long life, and Mil-Spec semi-rigid cable is used for interconnections. Temperature stability is maintained from -30 to +70°C by the use of temperature compensators, and threaded invar rod. Tuners are silver plated and sliding contacts are made with beryllium copper fingerstock. All models are 19" rack-mountable, and come with N Female connectors.

TPCP-8626, TPCF-8926 COMBLINE PRESELECTORS

The TPCP-8626 and TPCF-8926 Comblines Preselector filters are specially designed for use in 800 MHz master receive systems, allowing system designers to accommodate multiple systems while ensuring rejection of external noise sources. These preselectors and sideband filters provide maximum desense protection for receiver front ends when installed between the multicoupler or transmitter and antenna.

Comblines filters feature "sharp skirt" selectivity with very low insertion loss (see below). Each filter is factory tuned and tested on customer supplied frequencies prior to shipment. The 8626/8926 filter series is available with pass bandwidths of 10, 15, and 20 MHz, and each unit consists of a series of 6 resonators in a compact 13" x 2" x 4.5" package. These filters are typically supplied on a 19" panel for rack mounting, and other options are available on request.

POWER MONITORING

Broadband Wattmeters

Telewave Broadband Wattmeters are known worldwide for quality, durability, and convenience. A single meter covers 2-200 MHz or 20-1000 MHz and 1-500 watts with no plug-in elements or band switching.

Power Monitors

RF power monitors produce a calibrated DC voltage proportional to an RF signal between 30 and 960 MHz. They are available as single and dual-direction devices with very low insertion loss.

Alarm Panels

Power monitoring and alarm panels continuously monitor the output of up to 12 transmitters and 2 antennas. Multiple measurements are switch selectable including VSWR and FWD/REV power. Relay contact closures indicate out of range conditions.

MODEL 44L1, L1P BROADBAND RF WATTMETER

FEATURES

- REQUIRES NO ELEMENTS OR "SLUGS"
- NO BAND SWITCHING
- MEASURES 1 TO 500 WATTS
- 5 POWER RANGES
- 5 WATT FULL SCALE RANGE
- COVERS 2 - 200 MHz
- MEASURES FORWARD AND REFLECTED POWER
- -40 dB RF SAMPLING PORT
- SHOCK-MOUNTED METER
- LOW TEMPERATURE OPERATION
- QUICK-CHANGE CONNECTORS
- LIGHT WEIGHT: 3 LBS

The Telewave Model 44L1/L1P RF Wattmeter is a compact, versatile instrument used for direct measurement of forward and reflected RF power in a coaxial transmission line under any load conditions. Wide band capability and dynamic range allows operation without elements, inserts, or bandswitching.

The 20 microamp taut-band meter movement is shock mounted in a rugged, diecast housing, making this instrument ideal for mobile radio installation in aircraft or vehicles, as well as base stations.

Model 44L1P includes an RF sampling port, with an output 40 dB below the total transmission line level, for frequency measurement, signal injection, or spectral analysis.

MODEL 44L1P

BACK

CARRY CASE (OPTIONAL)

MODEL 44L1, L1P

This wideband instrument covers 2 to 200 MHz with a power range of 1 to 500 watts. The meter movement can be turned off for protection when not in use. A leather carrying strap is provided for easy portability. The use of a taut-band meter movement allows operation in cold temperatures.

The RF sample port on Model 44L1P samples a low level of RF power as it passes through the instrument. This bi-directional port is accessed via a BNC connector located on the side of the meter. It allows injection of a signal into the device under test, or can be used for spectrum analysis and frequency measurements without affecting operation of the meter.

The Model 44L1/L1P utilizes a set of precision directional detectors which sample forward and reverse CW power flow in a specially engineered section of transmission line. The sampled current is scaled

to drive the 20 μ A taut band meter. Forward and reflected power can be directly measured by rotating the FWD-REV switch. VSWR (Voltage Standing Wave Ratio) is easily determined by comparing these measurements and using the convenient chart on the back of the instrument.

Five power scales are provided. The 500 watt scale will test most high powered transmitters, while the 5 watt scale makes it simple to tune low powered portables. The excellent stability of this unit and the ability to switch it from one power range to another to check the calibration eliminates the need for a secondary standard to verify calibration.

SPECIFICATIONS	
Frequency range	2-200 MHz
Full scale power ranges	5, 15, 50, 150 and 500 watts
Impedance, primary line	50 ohms nominal
VSWR (max)	1.1:1
Accuracy (at 80% of full scale)	+/- 7% with N connectors only
RF sampling port (44L1P)	-40 dB +/-2 dB below total power (forward + reverse)
Connectors (input/output) (Quick-Change standard)	N Female standard UHF, DIN, TNC, BNC optional
Sample port	BNC Female
Dimensions (HWD)	in. 6.625 x 4 x 3.25 mm 168.3 x 101.6 x 82.6
Weight lbs (kg)	3 (1.36)

MODEL 44A, AP BROADBAND RF WATTMETER

FEATURES

- REQUIRES NO ELEMENTS OR "SLUGS"
- NO BAND SWITCHING
- MEASURES 1 TO 500 WATTS
- 5 POWER RANGES
- 5 WATT FULL SCALE RANGE
- COVERS 20 - 1000 MHz
- MEASURES FORWARD AND REFLECTED POWER
- -40 dB RF SAMPLING PORT
- SHOCK-MOUNTED METER
- LOW TEMPERATURE OPERATION
- QUICK-CHANGE CONNECTORS
- LIGHT WEIGHT: 3 LBS

The Telewave Model 44A/AP RF Wattmeter is a compact, versatile instrument used for direct measurement of forward and reflected RF power in a coaxial transmission line under any load conditions. Wide band capability and dynamic range allows operation without elements, inserts, or bandswitching.

The 20 microamp taut-band meter movement is shock mounted in a rugged, diecast housing, making this instrument ideal for mobile radio installation in aircraft or vehicles, as well as base stations.

Model 44AP includes an RF sampling port, with an output 40 dB below the total transmission line level, for frequency measurement, signal injection, or spectral analysis.

MODEL 44AP

BACK

CARRY CASE (OPTIONAL)

MODEL 44A, AP

This wideband instrument covers 20 to 1000 MHz with a power range of 1 to 500 watts. The meter movement can be turned off for protection when not in use. A leather carrying strap is provided for easy portability. The use of a taut-band meter movement allows operation in cold temperatures.

The RF sample port on Model 44AP samples a low level of RF power as it passes through the instrument. This bi-directional port is accessed via a BNC connector located on the side of the meter. It allows injection of a signal into the device under test, or can be used for spectrum analysis and frequency measurements without affecting operation of the meter.

The Model 44A/AP utilizes a set of precision directional detectors which sample forward and reverse

CW power flow in a specially engineered section of transmission line. The sampled current is scaled to drive the 20 μ A taut band meter. Forward and reflected power can be directly measured by rotating the FWD-REV switch. VSWR (Voltage Standing Wave Ratio) is easily determined by comparing these measurements and using the convenient chart on the back of the instrument.

Five power scales are provided. The 500 watt scale will test most high powered transmitters, while the 5 watt scale makes it simple to tune low powered portables. The excellent stability of this unit and the ability to switch it from one power range to another to check the calibration eliminates the need for a secondary standard to verify calibration.

SPECIFICATIONS

RF sampling port (44AP)	-40 dB +/-2 dB below total power (forward + reverse)
Connectors (input/output) (Quick-Change standard)	N Female standard UHF, DIN, TNC, BNC optional
Sample port	BNC-female
Dimensions (HWD)	in. 6.625 x 4 x 3.25 mm 168.3 x 101.6 x 82.6
Weight lbs (kg)	3 (1.36)

METER ACCURACY

RF POWER MONITORS

PM-1A, PM-2A SERIES

Telewave RF Power Monitors are single or dual-direction devices which produce a DC voltage proportional to an RF signal between 30 and 960 MHz, depending on model. These devices exhibit extremely low insertion loss, and are designed to be placed in the transmission line permanently, allowing continuous monitoring of forward and reflected power.

Each power monitor is used for one transmitter within a specified bandwidth. Voltage trimmers allow each unit to be quickly recalibrated for a new frequency within the same

band. One or two RCA connectors provide access to the proportional DC output, which is coupled to the meter panel with a simple shielded audio-type cable.

Standard RF connectors are N Female. Any combination of N, SMA, or UHF, Male or Female are available on request.

Note: Center frequency or desired band coverage must be specified with order.

PM-1A

PM-2A

MODEL	TYPE	FREQUENCY	BANDWIDTH*
PM-1A-50	Single Direction	30-88 MHz	20 MHz
PM-1A-90	Single Direction	87.5-108 MHz	20 MHz
PM-1A-150	Single Direction	118-230 MHz	50 MHz
PM-1A-300	Single Direction	200-400 MHz	50 MHz
PM-1A-450	Single Direction	380-512 MHz	50 MHz
PM-1A-760	Single Direction	700-869 MHz	50 MHz
PM-1A-900	Single Direction	806-960 MHz	50 MHz
PM-2A-50	Dual Direction	30-88 MHz	20 MHz
PM-2A-90	Dual Direction	87.5-108 MHz	20 MHz
PM-2A-150	Dual Direction	118-230 MHz	50 MHz
PM-2A-300	Dual Direction	200-400 MHz	50 MHz
PM-2A-450	Dual Direction	380-512 MHz	50 MHz
PM-2A-760	Dual Direction	700-869 MHz	50 MHz
PM-2A-900	Dual Direction	806-960 MHz	50 MHz
SPECIFICATIONS			
Input power range	5-1000 watts		
Impedance (typ.)	50 ohms		
VSWR (max)	1.1:1

Dimensions (HWD) in. (cm)	1.375 x 2.25 x 1.25 (3.5 x 5.7 x 3.2)		
Weight lb. (kg)	0.5 (0.2)		
RF connectors	Any combination of N, SMA, or UHF Male/Female (specify types)		
DC connectors	RCA-F standard, BNC-F or SMA (optional)		

*Bandwidth is the approximate maximum range over which a useful range of voltages are available without retuning.

PM1C1S

RF POWER MONITOR / ALARM PANEL

The Telewave PM1C1S is a single-channel, single antenna automatic alarm panel for low transmit power and high VSWR, featuring "true VSWR" circuitry and a built-in power monitor. The 2RU panel (3.5" x 19") mounts in any standard rack or inside most base station cabinets, and can be powered directly from 120 VAC or 12 VDC.

Whenever a low transmitter power condition is sensed by the PM1C1S, a latched relay closure occurs and a red light on the front panel turns on. Both normally-open and normally-closed relay contacts are provided.

A high VSWR condition is indicated by a second latched relay and light. These contacts can be used to remotely activate light, speakers, or other alarm systems. The relays and lights are reset by means of a front panel RESET button.

The panel also operates as an inline power monitor, measuring both forward and reverse RF power, with readings displayed on a 3.5-inch meter. A PM-2A power monitor for the appropriate frequency band is included, attached to the rear panel.

The PM1C1S has 2 meter scale options: 0-250 watts, or 0-400 watts. The meter scale and frequency band must be specified with the order.

POWER MONITORING

FREQUENCY RANGE	BANDWIDTH
30-88 MHz	20 MHz
87.5-108 MHz	20 MHz
118-512 MHz	50 MHz
760-960 MHz	40 MHz

The frequency range is determined by the integrated power monitor. Bandwidth is the approximate maximum range over which a useful range of voltages are available without retuning.

SPECIFICATIONS		
Power scales	FWD	0-250 watts or 0-400 watts
	REV	0-25 watts or 0-120 watts
VSWR alarm range		2.0:1 +25% / -10%
Low power alarm range		5 watts to full scale
Delay timing range		0.1 to 1 second
Relay contacts, closure		N/O and N/C
Relay contacts, ratings		3A - AC or DC
Temperature range		-20°C to +60°C
Power requirements		120 VAC / 4 W or +12 VDC / 2 W
Dimensions (HWD) in. (cm)		3.5 x 19 x 4 (8.9 x 48.3 x 10.2)
Weight lbs (kg)		3.5 (1.6)

PM5C1S

RF POWER MONITOR / ALARM PANEL

The Telewave PM5C1S is an automatic alarm panel featuring "true VSWR" circuitry. With optional PM-1A or PM-2A power monitors, this panel monitors the power output of up to 5 transmitters for low power, and provides a high VSWR alarm for one antenna. The 3RU (5.25" x 19") panel mounts in any standard rack or inside most base station cabinets, and can be powered directly from 120VAC or 12VDC.

Whenever a low transmitter power condition is sensed by the PM5C1S on one of the five channels, a latched relay closure occurs for the appropriate channel and a red light turns on at the front of the panel. Normally open and normally-closed relay contacts are provided for each individual channel.

A high antenna VSWR condition is accurately sensed at all power levels and indicated by a sixth latched relay and light. These contacts can be used to remotely activate lights, speakers, or other alarm systems. The relays and lights are reset by means of a front panel RESET button or by momentarily grounding the RESET input connection located on the rear of the unit.

The panel also operates as an inline power monitor, measuring both forward and reverse RF power of up to five transmitters plus a sixth channel for single antenna VSWR, with all readings displayed on a 3.5-inch meter. Up to 6 power monitors (not included) for the appropriate frequency band are required.

The PM5C1S has 2 meter scale options: 0-250 watts, or 0-400 watts. The meter scale must be specified with the order.

FREQUENCY RANGE	BANDWIDTH
30-88 MHz	20 MHz
87.5-108 MHz	20 MHz
118-512 MHz	50 MHz
760-960 MHz	40 MHz

The frequency range is determined by the associated power monitors. Bandwidth is the approximate maximum range over which a useful range of voltages are available without retuning.

SPECIFICATIONS		
Power scales	FWD	0-250 watts or 0-400 watts
	REV	0-25 watts or 0-120 watts
VSWR alarm range		2.0:1 +25% / -10%
Low power alarm range		5 watts to full scale
Delay timing range		0.1 to 1 second
Relay contacts, closure		N/O and N/C
Relay contacts, ratings		3A - AC or DC
Temperature range		-20°C to +60°C
Power requirements		120 VAC / 8 W or +12 VDC / 3.5 W
Dimensions (HWD) in. (cm)		5.25 x 19 x 3.25 (13.3 x 48.3 x 8.3)
Weight lbs (kg)		4 (1.8)

PM10C2S1C

RF POWER MONITOR PANEL

The Telewave PM10C2S1C is a 1RU, compact RF power monitor panel, capable of monitoring up to ten transmitters and two antennas with optional PM-1A or PM-2A power monitors. This unit fits in 1.75" x 19", preserving valuable rack space for other equipment.

The PM10C2S1C greatly simplifies procedures for monitoring the output of transmitters, and the condition of transmission lines and antennas. Ten remote transmitter keying switches are provided, and a simple two wire hook-up (RF shielded or twisted pair) from the keying circuit of each transmitter to the screw terminals located on the rear of the wattmeter panel completes the connections. A floating ground required by certain transmitters is provided for each keyer.

VSWR calculations can be made when appropriate dual-direction power monitors are installed. The FWD / REV switch on the front panel quickly displays forward and reflected power for the transmitter or antenna circuits. Up to 10 power monitors (not included) for the appropriate frequency band(s) are required.

The power monitor panel is not frequency dependent, and power monitors for multiple bands can be used with a single panel. No power supply is required for the meter panel.

FREQUENCY RANGE	BANDWIDTH
30-88 MHz	20 MHz
87.5-108 MHz	20 MHz
118-512 MHz	50 MHz
760-960 MHz	40 MHz

The frequency range is determined by the associated power monitors. Bandwidth is the approximate maximum range over which a useful range of voltages are available without retuning.

SPECIFICATIONS		
Power scales	FWD	0-400 watts
	REV	0-120 watts
Monitor inputs		12 FWD, 12 REV
Input connectors		RCA-Female
Temperature range		-20°C to +60°C
Dimensions (HWD) in. (cm)		1.75 x 19 x 5 (4.5 x 48.3 x 12.7)
Weight lbs (kg)		2 (0.9)

ISOLATORS AND LOADS

4 ISOLATORS AND LOADS

Coaxial Loads

RF loads provide stable constant impedance termination for receiver panels and transmitters up to 300 watts. Dry loads can be operated in any position, and offer extremely low VSWR and Quick-Change connectors.

Ferrite Isolators

Telewave isolators provide isolation between transmitters by controlling the directional flow of RF energy. Power which is coupled into an antenna system from a nearby transmitter can be circulated into a load before it contributes to intermodulation.

High Power Isolators

High power isolators handle up to 400 watts of power. These rugged devices are custom-built for each application and extensively tested in the Telewave manufacturing plant.

Intermodulation Suppression

IM Panels are self-contained devices which generally include a single or dual isolator, low-pass filter, and output termination load. Each panel is designed to provide plug-and-play installation and can solve many difficult interference problems.

TWL-01	100 mW	0-2500 MHz
TWL-35	35 W	0-1000 MHz
TWL-60	60 W	0-1000 MHz

TWL-01, 35, 60 COAXIAL RF TERMINATIONS

Telewave compact coaxial loads offer extremely low VSWR. All loads are machined to withstand any bench or field use, and their power rating provides substantial overload protection. Unlike oil-filled loads, these dry coaxial loads can be operated in any position. Connectors have a silver-plated center conductor, except TWL-01 which uses a gold-plated pin.

TWL-01 is designed as a port termination for receiver splitters with N, SMA, UHF, or BNC female outputs. TWL-35 and TWL-60 feature recessed male connectors for reduced size and ease of use. Applications include hybrids, isolators, power monitors, wattmeters, and coaxial port terminations.

FEATURES

- EXTREMELY LOW VSWR
- CW POWER RATINGS TO 60 WATTS
- DRY LOAD
- BROAD FREQUENCY RANGE
- RUGGED CONSTRUCTION
- N, BNC, OR UHF MALE CONNECTOR (Specify connector type)

TWL-60

TWL-35

TWL-01

SPECIFICATIONS	TWL-01*	TWL-35	TWL-60

*Used to terminate unused ports on receiver splitters and panels.

TWL-50, 75, 100, 100HS COAXIAL RF TERMINATIONS

Telewave Coaxial Loads feature extremely low VSWR and excellent stability. Applications include hybrids, isolators, power monitors, wattmeters, and coax line terminations.

Telewave loads are custom machined to withstand bench or field use. The conservative power rating provides substantial overload protection. Unlike liquid dielectric loads, Telewave dry coaxial terminations can be operated in any position.

All connectors have gold-plated center pins for maximum conductivity. Quick-Change connectors are standard on these loads, allowing easy configuration for any application. Specify connector type(s) when ordering.

For added flexibility, straight or elbow-type male-male adapters are available.

FEATURES

- EXTREMELY LOW VSWR
- CW POWER RATINGS TO 150 WATTS
- DRY DIELECTRIC
- BROAD FREQUENCY RANGE
- RUGGED CONSTRUCTION
- QUICK-CHANGE CONNECTORS

TWL-150, TWL-300 HIGH POWER TERMINATIONS

The Telewave TWL-150 Bench Load is ideal as a general purpose medium power termination. It is perfectly suited for terminating the Model 44A Broadband wattmeter, or any other application requiring a very low VSWR, 50 ohm termination. The carry handle and rugged construction allow convenient field use.

The Telewave TWL-300 Bench Load is our highest power standard termination. This load is designed for testing high power amplifiers, or applications requiring longer duty cycles.

Telewave coaxial loads feature extremely low VSWR and excellent stability. Applications include hybrids, isolators, power monitors, wattmeters, and coax line terminations.

Telewave loads are custom machined to withstand bench or field use. The conservative power rating provides substantial overload protection. Unlike liquid dielectric loads, Telewave dry coaxial terminations can be operated in any position.

All connectors have gold-plated center pins for maximum conductivity. Quick-Change connectors are standard on these loads, allowing easy configuration for any application. Specify connector type(s) when ordering.

T-1030 / T-1060 FERRITE ISOLATORS

Telewave Single and Dual Ferrite Isolators prevent intermodulation, and protect transmitters from high VSWR or mistuned filtering devices by providing a constant 50 ohm impedance. All Telewave isolators are manufactured and tested in our own plant to the highest quality standards. These isolators handle up to 50 watts of power, with several different load options. All Telewave isolators include one or two removeable 35 watt loads in the basic configuration. Typical tuning range is up to ± 3 MHz from the original center frequency, and typical isolation is 35 dB for single, and 70 dB for dual.

NOTE: Isolators have limited bandwidth and tuning range. Each isolator is manufactured for a specific range and tuned to a specific frequency. Please specify the exact desired operating frequency and special load requirements with the order.

T-1030 SINGLE ISOLATOR

CAVITY-MOUNT ISOLATOR

T-1060 DUAL ISOLATOR

BENEFITS

Under adverse conditions, the isolator performs several critical functions:

Broken Antenna, Damaged Cable, High VSWR

All of these conditions will cause large amounts of power to be reflected down the transmission line toward the transmitter. The circulatory property of the isolator will direct this energy to the load port, and protect the transmitter. The load on the isolator must be capable of handling full transmitter power. Age, water invasion, and incorrect cable length will also cause impedance changes. The tuned ports of the isolator provide a constant 50 ohm impedance for the transmitter to avoid overheating and oscillation.

Intermodulation

When RF energy from a strong nearby signal source enters a transmitter via the antenna, mixing with the primary transmitter frequency often occurs, resulting in the radiation of new, undesired signals. The isolator antenna port reflects out-of-band energy back to the antenna. In-band energy enters the isolator, and is circulated to the output load. No energy from nearby transmitters enters the protected transmitter from the antenna, and intermodulation can be eliminated.

SPECIFICATIONS		T-1030	T-1060
Frequency band	66-108 MHz	Single	Dual

T-1530M / T-1560M MEDIUM POWER VHF ISOLATORS

Telewave T-1530M and T-1560M Medium Power Isolators protect transmitters from reflected power, and provide maximum intermodulation suppression. A dual-stage unit can provide as much as 70 dB isolation for adjacent channel suppression. The low loss characteristic of the Telewave design insures maximum power transfer to the antenna system.

All Telewave isolators are manufactured and tested in our own plant to the highest quality standards. These isolators handle up to 115 watts of continuous power, with several different load options. One or two removeable 60 watt loads are included in the basic configuration. Higher power load options can be specified with an order.

Telewave isolators are magnetically compensated to allow mounting on any surface without significant detuning. Circulation direction may be specified for special mounting situations. To prevent radiation of harmonics, a cavity or harmonic filter should be placed between the isolator and the antenna.

NOTE: ISOLATORS ARE FACTORY TUNABLE ONLY, AND ARE BUILT FOR A SPECIFIC FREQUENCY.
ISOLATION DATA IS MEASURED WITH POWER APPLIED.

HIGH POWER ISOLATORS

SINGLE AND DUAL STAGE TO 400 WATTS

Telewave High Power Isolators provide maximum effectiveness in intermodulation suppression. A dual-stage unit can provide as much as 85 dB isolation for adjacent channel suppression, and better than 60 dB across the entire bandwidth. The low loss characteristic of the Telewave design insures maximum power transfer to the antenna system.

Telewave isolators are magnetically compensated to allow mounting on any surface without significant detuning. Circulation direction may be specified for special mounting situations. To prevent radiation of harmonics, a cavity or harmonic filter should be placed between the isolator and the antenna.

Telewave High Power Isolators are available in single or dual stage configurations from 148 to 960 MHz. Power capability of up to 400 watts is available, and many different termination options can be specified.

One or two removable 60 watt loads are supplied standard. Optional loads to 300 watts are available. Consult Telewave with load requirements, and special mounting or mechanical configurations.

NOTE: HIGH POWER ISOLATORS ARE NOT FIELD TUNABLE, AND ARE MANUFACTURED FOR A SPECIFIC FREQUENCY.
ISOLATION DATA IS MEASURED WITH POWER APPLIED.

TS150, 220, 350, 450, 760, 900 SERIES INTERMOD SUPPRESSION PANELS

Telewave Intermod Suppression Panels provide a simple, affordable, high-performance solution for cleaning up interference at congested radio sites, when a full combining system may not be cost-effective. In addition to controlling transmitter intermodulation, IM Panels also greatly reduce transmitter maintenance and expensive repairs by providing a constant 50 ohm load, protecting the transmitter from opens, shorts, or other faults in the antenna system.

Telewave IM Panels do not rely on any cables or other lossy interconnections, other than to the transmit chain. Each standard or custom panel includes one or more isolators with appropriate terminations, and a low-pass filter.

Each panel is factory tuned to specific frequencies supplied with the order. All 100 and 150 watt units are field tunable by approximately $\pm 3-6$ MHz depending on frequency, and include complete tuning instructions. No specialized equipment is required.

150 watt units ship with a 35 watt primary load, and a 50 watt termination on the antenna isolation (2nd) port. 300 and 400 watt units ship with a 100 watt second stage termination, and are not field tunable. Center frequency and load requirements must be specified when ordering. Contact Telewave if additional information or assistance is required.

THRP-1548, 4548, 7648, 8648 HIGH PERFORMANCE REPEATER PANEL

The Telewave High Performance Repeater Panel greatly improves the effective sensitivity and selectivity of a repeater receiver for extended mobile and portable coverage, and provides maximum intermodulation protection for the transmitter.

The THRP panel uses a dual isolator with a 50 watt termination on the second stage output, and a low pass filter for transmitter IM protection. This combination provides more than 60 dB of IM protection over a ± 5 MHz bandwidth, and transmitter 2nd harmonic attenuation of over 50 dB.

The duplexer utilizes four 4" cavities in a pass/reject configuration. This duplexer has only 1.8 dB insertion loss, and provides over 110 dB isolation. The receiver side of the duplexer is interconnected to two 8" high "Q" bandpass cavities, to form a narrow pass-band preselector.

The output of the preselector is coupled to one of two types of low-noise preamplifiers. The standard configuration uses a TLA series low-noise bipolar preamp. This preamp is recommended for areas that are prone to lightning damage or high ambient signal levels.

The optional TGA series preamps use a PHEMT amplifier for higher sensitivity. This preamp is recommended for sites with low existing RF noise levels.

The THRP series puts all this equipment on one 14" x 19" panel, pretuned and ready to install. The total price is less than if the equipment was purchased separately, and requires less rack space.

FREQUENCY RANGES	
THRP-1548	138 - 174 MHz

5 CAVITIES AND FILTERS

Bandpass

Bandpass cavities allow a single frequency or a very narrow group of frequencies to reach a receiver, or leave a transmitter. All other frequencies are rejected by these filters.

Bandpass / Bandreject

Pass / Reject cavities offer a modified pass response for a narrow band of frequencies, and also provide a tunable notch which deepens the reject response at a particular frequency. This type of filter supports closer frequency spacing than a standard pass cavity.

Notch

Notch cavities reject a particular frequency or a narrow window of frequencies. These cavities have extremely low insertion loss and are very useful as standalone devices or in addition to passband filters.

Single / Dual / Triple

Multiple cavities provide a wider passband or reject band, or a steeper roll-off outside the pass or reject band. They also enable multiple-window filters which can pass or reject more than one group of frequencies within a band.

Lowpass / Highpass / Crystal

Low pass filters help to eliminate harmonics and spurs which may occur above the fundamental frequency of a transmitter. Highpass filters attenuate unwanted energy below the fundamental frequency, and are also used to protect receivers. Crystal filters provide extremely sharp response to protect receivers from closely-spaced transmitters.

TWPC-0310-1, 0410-1 BANDPASS CAVITIES

The Telewave TWPC-0310-1 and TWPC-0410-1 are 10" diameter, ¼-wavelength, high "Q" bandpass cavity filters with superior selectivity. Bandpass cavities reject all frequencies outside a narrow pass band. These cavities reduce transmitter sideband noise, and also protect receivers against desensitization.

The TWPC-0310-1 covers 30–40 MHz, and the TWPC-0410-1 covers 40–50 MHz. The tuning range of these cavities is approximately ± 2.5 MHz from center frequency as built. All cavities are tuned to specified frequencies prior to shipping. No further adjustments should be required. The positive locking mechanism allows for quick field re-tuning if frequency changes become necessary.

These cavities feature calibrated adjustable coupling, so that insertion loss can be easily set from 0.5 dB to 2 dB or more with corresponding increases in selectivity. This allows cavity response to be optimized for any operating environment. At densely populated sites, the 0310 / 0410-2 dual and 0310 / 0410-3 triple cavity filters provide much greater selectivity with minimum insertion loss. Multiple cavities can also provide a wider passband when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The pass frequency is temperature stable from -30°C to $+70^{\circ}\text{C}$. Ground loop technology places the center pin of each coupling loop at DC ground potential.

Heavy duty materials are used throughout each cavity to insure high performance and long life. Cavity top plates are machined from ¼-inch aluminum, and are heliarc welded to the cavity body at the high current point for improved conductivity and strength. This allows Telewave cavities to handle up to 350 watts, depending on insertion loss.

Rigid foam inserts support the tuner assembly allowing vertical or horizontal mounting. Similar metals and alodined aluminum help prevent galvanic corrosion. Silver plated tuners and beryllium copper finger stock provide non-corrosive low loss contact, and ensure reliable, long-term performance.

TWPC-0412-1, TWNC-0412-1 **BANDPASS CAVITY, NOTCH CAVITY**

The Telewave TWPC-0412-1 is a 12" diameter, ¼-wavelength high "Q" bandpass cavity filter with superior selectivity. Band-pass cavities reject all frequencies outside a narrow pass band. These cavities reduce transmitter sideband noise, and also protect receivers against desensitization.

The TWNC-0412-1 is a 12" diameter, ¼-wavelength notch cavity with an adjustable coupling loop. These cavities reject a narrow band of frequencies, and are often used in conjunction with pass cavities in complex filtering designs. Notch cavities have very low loss outside the notch band, and Telewave can also "tilt" the notch response to move a notch very close to a pass frequency without adversely affecting the pass response.

The TWPC and TWNC-0412-1 cover 40-50 MHz. The tuning range of these cavities is approximately ± 2.5 MHz from center frequency as built. All cavities are tuned to specified frequencies prior to shipping. No further adjustments should be required. The positive locking mechanism allows for quick field re-tuning if frequency changes become necessary.

These cavities feature calibrated adjustable coupling, so that pass cavity insertion loss can be easily set from 0.5 dB to 2 dB or more with corresponding increases in selectivity. This allows cavity response to be optimized for any operating environment. At densely populated sites, the 0412-2 dual pass cavity filter provides greater selectivity.

Multiple cavities can also provide a wider passband or notch when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The pass frequency is temperature stable from -30°C to $+70^{\circ}\text{C}$. Telewave Ground Loop technology places the center conductor of each coupling loop at DC ground potential for lightning protection and noise reduction.

Heavy duty materials are used throughout each cavity to insure high performance and long life. Cavity top plates are machined from ¼-inch aluminum, and are heliarc welded to the cavity body at the high current point for improved conductivity and strength. This allows Telewave cavities to handle up to 350 watts, depending on insertion loss.

Rigid foam inserts support the tuner assembly allowing vertical or horizontal mounting. Similar metals and alodined aluminum help prevent galvanic corrosion. Silver plated tuners and beryllium copper finger stock provide non-corrosive low loss contact, and ensure reliable, long-term performance.

TWPC-1005-1,2 BANDPASS CAVITIES

The Telewave TWPC-1005-1, and 1005-2 are 5" diameter, ¼-wavelength, high "Q" bandpass cavity filter with superior selectivity. Bandpass cavities reject all frequencies outside a narrow pass band. These cavities reduce transmitter sideband noise, and also protect receivers against desensitization.

TWPC-1005 cavities cover 88-108 MHz, and can be tuned at 50 or 75 ohms upon request. All cavities are tuned to specified frequencies prior to shipping, and no further adjustments should be required. The positive locking mechanism allows for quick field re-tuning if frequency changes become necessary.

These cavities feature calibrated adjustable coupling, and insertion loss can be easily set from 0.5 dB to 2 dB or more to improve selectivity. This allows cavity response to be optimized for any operating environment. At densely populated sites, the TWPC-1005-2 dual cavity filter provides greater selectivity with minimum insertion loss. Multiple cavities can also provide a wider passband when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The pass frequency is temperature stable from -30°C to +70°C. Telewave Ground Loop technology places the center conductor of each coupling loop at DC ground potential for lightning protection and noise reduction.

Nominal impedance	50 ohms (75 ohm opt.)	
VSWR at resonance (max)	1.5:1	
Input power (max) vs. insertion loss	0.5 dB - 350 watts, 1 dB - 250 watts, 2 dB - 150 watts	
Temperature range	-30°C to +60°C	
Cavity electrical length	1/4 wavelength	
Outer conductor, end plates	6061-T6 aluminum	
Inner conductor, coupling loops	Silver plated copper	
Tuning rod	Invar	
Contactors, fingerstock	Beryllium copper	
Cavity dimensions (Diam. x H) in. (cm)	8 x 36 (13 x 91)	
Connectors	N or UHF female (opt.)	
Finish	Gray acrylic enamel	

NOTE: Customized response curves are available to meet exact system requirements.

TWNC-1005-1, 2 NOTCH CAVITIES

The Telewave TWNC-1005-1 and TWNC-1005-2 are 5" diameter, ¼-wavelength notch cavities with an adjustable coupling loop. Notch cavities are typically used together with Pass or Pass/Reject cavities to eliminate a particular frequency. Notch cavities have very low loss outside the notch band. Telewave can also "tilt" the notch response to move a notch very close to a pass frequency without adversely affecting the pass response.

TWNC-1005 cavities cover 88-108 MHz, and can be tuned at 50 or 75 ohms upon request. All cavities are tuned to specified frequencies prior to shipping, and no further adjustments should be required. The positive locking mechanism allows for quick field re-tuning if frequency changes become necessary.

These cavities feature calibrated adjustable coupling, which can be easily changed to improve notch depth. This allows cavity response to be optimized for any operating environment. At densely populated sites, the TWNC-1005-2 dual cavity filter provides a deeper notch with minimum insertion loss. Multiple cavities can also provide a wider passband when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The notch frequency is temperature stable from -30°C to +70°C. Telewave Ground Loop technology places the center conductor of each coupling loop at

DC ground potential for lightning protection and noise reduction.

Heavy duty materials are used throughout each cavity to insure high performance and long life. Cavity top plates are machined from ¼-inch aluminum, and are heliarc welded to the cavity body at the high current point for improved conductivity and strength. This allows Telewave cavities to handle up to 350 watts, depending on insertion loss.

Rigid foam inserts support the tuner assembly allowing vertical or horizontal mounting. Similar metals and alodined aluminum help prevent galvanic corrosion. Silver plated tuners and beryllium copper finger stock provide non-corrosive low loss contact, and ensure reliable, long-term performance.

Net weight lb. (kg)	10 (4.6)	21.5 (9.8)
Shipping weight lb. (kg)	13 (6)	24 (10.9)
COMMON SPECIFICATIONS		
Tuning frequency range	148-174 MHz	
Nominal impedance	50 ohms	
VSWR at resonance (max)	1.5:1	
Input power (max) vs. insertion loss	0.5 dB - 350 watts, 1 dB - 250 watts, 2 dB - 150 watts	
Temperature range	-30°C to +70°C	
Cavity electrical length	¼ wavelength	
Outer conductor, end plates	6061-T6 aluminum	
Inner conductor, coupling loops	Silver plated copper	
Tuning rod	Invar	
Contactors, fingerstock	Beryllium copper	
Cavity dimensions (Diam. x H) in. (cm)	10 x 23.5 (25 x 60)	
Connectors	N or UHF female (opt.)	
Finish	Gray acrylic enamel	

NOTE: When ordering be sure to specify exact frequency and model number. Contact the factory if additional information or assistance is required.

TPRC-1505-1,2

PASS-REJECT CAVITIES

TPRC-1505-1

TPRC-1505-2

The Telewave TPRC-1505-1 and 1505-2 are 5" diameter, ¼-wavelength Pass-Reject cavities with an adjustable coupling loop and tuning capacitor. Pass-Reject cavities reject all frequencies outside a narrow pass band, with a tunable notch for additional protection with close spacing. These cavities are commonly used to reduce transmitter sideband noise, and protect receivers against desensitization.

TPRC-1505 cavities cover 148-174 MHz. All cavities are tuned to specified frequencies prior to shipping, and no further adjustments should be required. The positive locking mechanism allows for quick field re-tuning if frequency changes become necessary.

These cavities feature calibrated adjustable coupling, and insertion loss can be easily set from 0.5 dB

to 2 dB or more to improve selectivity. This allows cavity response to be optimized for any operating environment. At densely populated sites, the TPRC-1505-2 dual cavity filter provides greater selectivity with minimum insertion loss. Multiple cavities can also provide a wider passband when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The pass and reject frequencies are temperature stable from -30°C to +70°C. Telewave Ground Loop technology places the center conductor of each coupling loop at DC ground potential for lightning protection and noise reduction.

Heavy duty materials are used throughout each cavity to insure

high performance and long life. Cavity top plates are machined from ¼-inch aluminum, and are heliarc welded to the cavity body at the high current point for improved conductivity and strength. This allows Telewave cavities to handle up to 350 watts, depending on insertion loss.

Rigid foam inserts support the tuner assembly allowing vertical or horizontal mounting. Similar metals and alodined aluminum help prevent galvanic corrosion. Silver plated tuners and beryllium copper finger stock provide non-corrosive low loss contact, and ensure reliable, long-term performance.

TPRC-1505-1,2

TYPICAL SELECTIVITY CHARACTERISTICS

MODEL	TPRC-1505-1	TPRC-1505-2

TWNC-1505-1,2 NOTCH CAVITIES

TWNC-1505-1

TWNC-1505-2

The Telewave TWNC-1505-1 and 1505-2 are 5" diameter, ¼-wavelength notch cavities with an adjustable coupling loop. Notch cavities are typically used together with Pass or Pass/Reject cavities to eliminate a particular frequency. Notch cavities have very low loss outside the notch band. Telewave can also "tilt" the notch response to move a notch very close to a pass frequency without adversely affecting the pass response.

TWNC-1505 cavities cover 148-174 MHz. All cavities are tuned to specified frequencies prior to shipping, and no further adjustments should be required. The positive locking mechanism allows for quick field re-tuning if frequency changes become necessary.

These cavities feature calibrated adjustable coupling, which can be easily changed to improve

selectivity. This allows cavity response to be optimized for any operating environment. At densely populated sites, the TWNC-1505-2 dual cavity filter provides greater selectivity with minimum insertion loss. Multiple cavities can also provide a wider notch when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The pass and reject frequencies are temperature stable from -30°C to +70°C. Telewave Ground Loop technology places the center conductor of each coupling loop at DC ground potential for lightning protection and noise reduction.

Heavy duty materials are used throughout each cavity to insure high performance and long life.

Cavity top plates are machined from ¼-inch aluminum, and are heliarc welded to the cavity body at the high current point for improved conductivity and strength. This allows Telewave cavities to handle up to 350 watts, depending on insertion loss.

Rigid foam inserts support the tuner assembly allowing vertical or horizontal mounting. Similar metals and alodined aluminum help prevent galvanic corrosion. Silver plated tuners and beryllium copper finger stock provide non-corrosive low loss contact, and ensure reliable, long-term performance.

TWPC-2205-1,2,3 BANDPASS CAVITY

TWPC-2205-1

TWPC-2205-2

TWPC-2205-3

The Telewave TWPC-2205-1, 2205-2, and 2205-3 are 5" diameter, ¼-wavelength, high "Q" bandpass cavity filters with superior selectivity. Bandpass cavities reject all frequencies outside a narrow pass band. These cavities reduce transmitter sideband noise, and also protect receivers against desensitization.

TWPC-2205 cavities cover 200-300 MHz. All cavities are tuned to specified frequencies prior to shipping, and no further adjustments should be required. The positive locking mechanism allows for quick field retuning if frequency changes become necessary.

These cavities also feature calibrated adjustable coupling, and insertion loss can be easily set from 0.5 dB to 2 dB or more to improve selectivity. This allows

cavity response to be optimized for any operating environment. At densely populated sites, the 2205-2 and 2205-3 cavity filters provide greater selectivity with minimum insertion loss. Multiple cavities can also provide a wider passband when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The pass frequency is temperature stable from -30°C to +70°C. Telewave Ground Loop technology places the center conductor of each coupling loop at DC ground potential for lightning protection and noise reduction.

Heavy duty materials are used throughout each cavity to insure high performance and long life.

Cavity top plates are machined from ¼-inch aluminum, and are heliarc welded to the cavity body at the high current point for improved conductivity and strength. This allows Telewave cavities to handle up to 350 watts, depending on insertion loss.

TWPC-7908-1, -2 BANDPASS CAVITY

TWPC-7908-1

TWPC-7908-2

The Telewave TWPC-7908-1 and 7908-2 are 8" diameter, ¼-wavelength, high "Q" bandpass cavity filters with superior selectivity. Bandpass cavities reject all frequencies outside a narrow pass band. These cavities reduce transmitter sideband noise, and also protect receivers against desensitization.

TWPC-7908 cavities cover 776-825 MHz. All cavities are tuned to specified frequencies prior to shipping, and no further adjustments should be required. The positive locking mechanism allows for quick field retuning if frequency changes become necessary.

These cavities also feature calibrated adjustable coupling, and insertion loss can be easily set from

0.5 dB to 2 dB or more to improve selectivity. This allows cavity response to be optimized for any operating environment. At densely populated sites, the 7908-2 cavity filter provides greater selectivity with minimum insertion loss. Multiple cavities can also provide a wider passband when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The pass frequency is temperature stable from -30°C to +70°C. Telewave Ground Loop technology places the center conductor of each coupling loop at DC ground potential for lightning protection and noise reduction.

Heavy duty materials are used throughout each cavity to insure high performance and long life. Cavity top plates are machined from ¼-inch aluminum, and are heliarc welded to the cavity body at the high current point for improved conductivity and strength. This allows Telewave cavities to handle up to 350 watts, depending on insertion loss.

Similar metals and alodined aluminum help prevent galvanic corrosion. Silver plated tuners and beryllium copper finger stock provide non-corrosive low loss contact, and ensure reliable, long-term performance.

TWPC-8608-1,-2 BANDPASS CAVITIES

TWPC-8608-1

TWPC-8608-2

The Telewave TWPC-8608-1 and 8608-2 are 8" diameter, ¼-wavelength, high "Q" bandpass cavity filters with superior selectivity. Bandpass cavities reject all frequencies outside a narrow pass band. These cavities reduce transmitter sideband noise, and also protect receivers against desensitization.

TWPC-8608 cavities cover 800-970 MHz. All cavities are tuned to specified frequencies prior to shipping, and no further adjustments should be required. The positive locking mechanism allows for quick field retuning if frequency changes become necessary.

These cavities also feature calibrated adjustable coupling, and insertion loss can be easily set from

0.5 dB to 2 dB or more to improve selectivity. This allows cavity response to be optimized for any operating environment. At densely populated sites, the 8608-2 cavity filter provides greater selectivity with minimum insertion loss. Multiple cavities can also provide a wider passband when required. Mounting rails are provided for all multiple-cavity filters.

Excellent frequency stability is achieved by the use of a specially machined compensator and Invar rod. The pass frequency is temperature stable from -30°C to +70°C. Telewave Ground Loop technology places the center conductor of each coupling loop at DC ground potential for lightning protection and noise reduction.

Heavy duty materials are used throughout each cavity to insure high performance and long life. Cavity top plates are machined from ¼-inch aluminum, and are heliarc welded to the cavity body at the high current point for improved conductivity and strength. This allows Telewave cavities to handle up to 350 watts, depending on insertion loss.

Similar metals and alodined aluminum help prevent galvanic corrosion. Silver plated tuners and beryllium copper finger stock provide non-corrosive low loss contact, and ensure reliable, long-term performance.

TLF-50, -90, -90H, 150, 450, 760, 860 LOWPASS FILTERS

Telewave Lowpass Filters eliminate harmonics, spurs, and intermodulation products that may occur above the fundamental frequency of a transmitter. These devices feature extremely low insertion loss, and are designed to be installed in the transmission line continuously. The standard connector configuration is N Female to N Male. Other combinations are available, including 7-16 DIN (extra cost).

TWX-50, 150 RECEIVER CRYSTAL FILTER

Telewave Crystal Filters provide an extremely narrow bandpass for a single frequency, to protect a receiver from nearby transmitters and adjacent channel interference. This bandpass is much sharper than a typical high "Q" cavity filter.

The combination of a crystal filter and a Telewave TLA or TGA series preamplifier can often rescue a receiver that has been impacted by an new adjacent transmitter, or allow implementation of a system with insufficient available frequency spacing.

6

DUPLEXERS

Bandpass

Bandpass duplexers allow only a narrow band of frequencies to reach the receiver or leave the transmitter. All other frequencies are rejected. These duplexers are the best available for crowded RF environments where transmit and receive frequencies have significant separation.

Pass - Reject

Pass / Reject duplexers offer a modified pass response for a narrow band of frequencies, and also provide a tunable notch which deepens the reject response at a particular frequency. This type of filter supports closer frequency spacing than a bandpass duplexer.

Bandpass / Bandreject

Bandpass / Bandreject duplexers provide a true bandpass for a group of transmitters and receivers, with a tunable notch which increases the reject response at a particular frequency. These duplexers can also combine two transmitters into one antenna.

Compact

Compact duplexers use specially designed Telewave square cavity filters. The size and form factor of these duplexers allows for more efficient use of rack space in many installations.

Comblines

Comblines duplexers offer wide bandpass and sharp skirts in a very compact package. The comblines design also exhibits very low insertion loss and can handle up to 650 watts of power.

Mobile

Mobile duplexers are very compact devices which use helical resonators to provide a notchband response for a transmitter and receiver. They are ideally suited for limited space applications with one transmitter and one receiver.

TPRD-0354, 0454 PASS / REJECT DUPLEXER

The Telewave TPRD-0354 and TPRD-0454 allow the simultaneous operation of a transmitter and receiver into a common antenna. These duplexers feature minimum insertion loss, and maximum isolation between transmitter and receiver. The Pass-Reject design combines a bandpass response with a tunable notch at the RX frequency for improved performance at close spacing.

The superior construction of Telewave cavity duplexers allows better rejection of transmitter spurious radiation, providing greater receiver protection. Selectivity and insertion loss are fully adjustable by rotating the calibrated connector loops.

Telewave cavities are manufactured with 1/4" aluminum top plates, which are fully welded to the aluminum outer conductor. Silver plated tuners, beryllium copper finger stock contactors, and

threaded Invar tuning rods assure maximum temperature stability, higher "Q", and years of trouble free operation.

Net weight lb. (kg)	40 (18.2)

TPRD-1084 PASS-REJECT BASE STATION DUPLEXER

The Telewave TPRD-1084 Duplexer allows simultaneous operation of a transmitter and receiver into a common antenna. This Pass-Reject duplexer is ideal for use in systems requiring maximum isolation, with close frequency spacing down to 500 KHz.

The TPRD-1084 duplexer has two pass-reject cavities each in the transmitter and receiver sections. Selectivity and insertion loss may be adjusted by rotating the calibrated connector loops. (See graphs for typical response curves).

Telewave duplexers have ¼-inch aluminum top plates which are

fully welded to the aluminum outer conductor. As a result of their superior construction, Telewave 8" cavity duplexers achieve greater rejection of transmitter spurious and noise radiation, providing better receiver protection. Silver-plated tuners, beryllium copper finger stock contactors, and threaded Invar rods assure maximum temperature stability, higher "Q", and many years of trouble-free operation.

TPRD-1454, 1456

BANDPASS / REJECT DUPLEXERS

TPRD-1454

TPRD-1456

Telewave TPRD-1454 and TPRD-1456 duplexers allow simultaneous operation of a transmitter and receiver into a common antenna. These pass-reject duplexers are ideal for systems with very close frequency spacing.

The Telewave TPRD-1454 has two pass-reject cavities in the transmitter and receiver sections. This duplexer is designed for transmitters and receivers with frequency spacing of 600 KHz or more.

The TPRD-1456 has three pass-reject cavities in the transmitter and receiver sections. This duplexer is designed for transmitters and receivers with frequency spacing of 400 KHz or more.

Because of their superior construction, these Telewave 5" cavity duplexers achieve greater

rejection of transmitter noise and spurious radiation, providing excellent receiver protection.

Telewave duplexers have ¼" aluminum top plates which are fully welded to the aluminum outer conductor. Silver-plated tuners, beryllium copper finger stock contactors and threaded Invar rods assure maximum temperature stability, higher "Q", and many years of trouble free operation.

Selectivity and insertion loss may be adjusted by rotating the calibrated connector loops. (See next page for typical response curves.)

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. If frequency changes are required, the positive locking mechanism allows

for easy field tuning by rotating the threaded Invar rod.

The optional TBC-40 indoor cabinet completely encloses the duplexers, and protects it from dust, dirt and tampering. All connections are accessible from the top of the cabinet.

TYPICAL RESPONSE CURVES (TPRD-1484)

TPRD-1544F PASS-REJECT DUPLEXER

TPRD-1544F with TWX-5 spacers

The Telewave TPRD-1544F allows simultaneous operation of a transmitter and receiver into a common antenna. This pass-reject duplexer utilizes folded four-inch cavities to achieve high "Q" in a compact size.

Telewave folded cavities utilize a special construction technique and circuit design which allow a physically shorter cavity to produce nearly the same performance as a standard length cavity.

The TPRD-1544F duplexer uses two folded pass-reject cavities in the

transmitter and receiver sections, for frequency spacing of 2 MHz or more. Selectivity and insertion loss may be adjusted by rotating the calibrated connector loops.

This duplexer is designed to mount horizontally on a 19" rack. Spacing brackets are available to allow mounting in a cabinet with 5" or 8" depth from the front.

Telewave duplexers feature cavities with 1/4" aluminum top plates, which are fully welded to the aluminum outer conductor. Silver-plated tuners, beryllium copper finger

stock contactors and threaded Invar rods assure maximum temperature stability, and many years of trouble free operation.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. If frequency changes are required, the positive locking mechanism allows for straightforward field tuning by rotating the threaded Invar rod.

ELECTRICAL SPECIFICATIONS	
Tuning range	148-174 MHz
Frequency separation (min)	2 MHz
Maximum input power	350 watts
Insertion loss TX / RX to ant. (typ.)	1.0 dB
TX noise suppression at RX (min)	80 dB at 2 MHz
RX isolation at TX (min)	80 dB at 2 MHz
VSWR (max)	1.5:1
Temperature range	-30°C to +60°C
Number of cavities	(4) - 4"
MECHANICAL SPECIFICATIONS	
Mounting	19" Rack mount
Dimensions (HWD) in. (cm) (Tuners fully extended)	5.25 x 19 x 17 (13.3 x 48.3 x 43.2)
Connectors	N or UHF Female
Finish	Gray acrylic enamel
Net weight lb. (kg)	15 (6.8)

TYPICAL RESPONSE

TPRD-1543C COMPACT PASS / REJECT DUPLEXER

The TPRD-1543C produces high performance in a compact design for the 148-174 MHz VHF band. This duplexer is less than 30% of the size of earlier models, and delivers equivalent performance.

Precise construction and high quality components results in excellent temperature stability under the most demanding conditions. The duplexer fits a standard 19" rack, with rack height of 5.25". Each duplexer is tuned and tested for maximum performance prior to shipping.

ELECTRICAL SPECIFICATIONS	
Tuning range	148-174 MHz
Frequency separation (min)	5 MHz
Maximum input power	350 watts
Insertion loss TX / RX to ant.	1.5 dB
TX noise suppression at RX (typ)	90 dB
RX isolation at TX (typ)	50 dB
VSWR (max)	1.5:1
Temperature range	-30°C to +70°C
Number of cavities	(3) - 4"
MECHANICAL SPECIFICATIONS	
Mounting	19" Rack
Dimensions (HWD) in.	5.25 x 19 x 11.5
(tuning rods fully extended) in.	5.25 x 19 x 16.5
Connectors	N or UHF female
Finish	Acrylic enamel
Net weight lb. (kg)	15 lb.

TPRD-1544C, 1544CM COMPACT PASS / REJECT DUPLEXER

The TPRD-1544C and 1544CM produce high performance in a compact design for the 148-174 MHz VHF band. These duplexers are less than 30% of the size of earlier models, and deliver greater isolation and power handling.

The TPRD-1544C and CM produce 70 dB isolation at 600 KHz, with 350 watt power handling, and insertion loss is 1.5 dB or less. Each duplexer fits a standard 19-inch rack, with rack height of 5.25" and 4" respectively. The TPRD-1544CM is supplied with adjustable mounting tabs for installation in a cabinet.

TPRD-1546C COMPACT PASS / REJECT DUPLEXER

The TPRD-1546C offers high performance in a compact design for the 148-174 MHz VHF band.

Custom extruded 4" cavities allow horizontal rack mounting. Three pass-reject sections in the transmit and receive paths provide 80 dB isolation at 500 KHz, with a 350 watt power rating, and insertion loss of 2.5 dB or less. The duplexer fits a standard 19" rack, with rack height of 8.75".

ELECTRICAL SPECIFICATIONS	
Tuning range	148-174 MHz
Frequency separation (min)	500 KHz
Maximum input power	350 watts

TPCD-1553, 1554, 1556 VHF BANDPASS DUPLEXERS

TPCD-1553

TPCD-1554

TPCD-1556

The Telewave TPCD-1553, TPCD-1554, and TPCD-1556 allow simultaneous operation of a transmitter and receiver into a common antenna. These bandpass duplexers are ideal in frequency congested areas where protection is needed from surrounding transmitters, and where maximum transmitter sideband filtering is necessary.

Because of their superior construction, these Telewave 5" cavity duplexers achieve greater rejection of transmitter noise and spurious radiation, providing excellent receiver protection. Telewave duplexers have 1/4" aluminum top plates which are fully welded to the aluminum outer conductor. Silver-plated tuners, beryllium copper finger stock

contactors and threaded Invar rods assure maximum temperature stability, higher "Q", and many years of trouble free operation.

Selectivity and insertion loss may be adjusted by rotating the calibrated connector loops. (See next page for typical response curves.)

The TPCD-1553 includes two bandpass cavities in the transmitter section. It is recommended when frequency spacing between transmitter and receiver is 5 MHz or more.

The TPCD-1554 has two bandpass cavities in both the transmitter and receiver sections. This duplexer is designed for transmitters and receivers with a spacing of 4 MHz or more.

The TPCD-1556 has three bandpass cavities in both the transmitter and receiver sections. This duplexer is designed for transmitters and receivers with spacing of 2 MHz or more.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. If frequency changes are required, the positive locking mechanism allows for easy field tuning by rotating the threaded Invar rod.

TPRD-1554, 1556 BANDPASS / REJECT DUPLEXERS

TPRD-1554

TPRD-1556

Telewave TPRD-1554 and TPRD-1556 duplexers allow simultaneous operation of a transmitter and receiver into a common antenna. These pass-reject duplexers are ideal for systems with very close frequency spacing.

The Telewave TPRD-1554 has two pass-reject cavities in the transmitter and receiver sections. This duplexer is designed for transmitters and receivers with frequency spacing of 600 KHz or more.

The TPRD-1556 has three pass-reject cavities in the transmitter and receiver sections. This duplexer is designed for transmitters and receivers with frequency spacing of 400 KHz or more.

Because of their superior construction, these Telewave 5" cavity duplexers achieve greater

rejection of transmitter noise and spurious radiation, providing excellent receiver protection.

Telewave duplexers have 1/4" aluminum top plates which are fully welded to the aluminum outer conductor. Silver-plated tuners, beryllium copper finger stock contactors and threaded Invar rods assure maximum temperature stability, higher "Q", and many years of trouble free operation.

Selectivity and insertion loss may be adjusted by rotating the calibrated connector loops. (See next page for typical response curves.)

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. If frequency changes are required, the positive locking mechanism allows

for easy field tuning by rotating the threaded Invar rod.

The optional TBC-40 indoor cabinet completely encloses the duplexer, and protects it from dust, dirt and tampering. All connections are accessible from the top of the cabinet.

TPRD-1566

BANDPASS - BANDREJECT DUAL NOTCH DUPLEXER

The Telewave TPRD-1566 allows simultaneous operation of a transmitter and receiver into a common antenna. This pass/reject duplexer has low insertion loss, and is ideal for systems with close frequency separation.

The TPRD-1566 has three pass/reject cavities in both the transmitter and receiver sections. This duplexer is designed for transmitters and receivers with frequency spacing of 300 KHz or more. Selectivity and insertion loss may be adjusted by rotating the calibrated connector loops. (See next page for typical response curves.)

Because of their superior construction, these Telewave 6" cavity duplexers achieve greater

rejection of transmitter noise and spurious radiation, providing excellent receiver protection.

Telewave duplexers have 1/4" aluminum top plates which are fully welded to the aluminum outer conductor. Silver-plated tuners, beryllium copper finger stock contactors and threaded Invar rods assure maximum temperature stability, higher "Q", and many years of trouble free operation.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. If frequency changes are required, the positive locking mechanism allows for easy field tuning by rotating the threaded Invar rod.

The optional TBC-40 indoor cabinet completely encloses the duplexer, and protects it from dust, dirt and tampering. All connections are accessible from the top of the cabinet.

TPRD-1584, 1586 PASS-REJECT BASE STATION DUPLEXER

Telewave models TPRD-1584 and TPRD-1586 allow simultaneous operation of a transmitter and receiver into a common antenna. These Pass-Reject duplexers are an ideal choice for systems requiring maximum isolation, with close frequency spacing down to 300 KHz.

The TPRD-1584 has two, and the TPRD-1586 has three Pass-Reject cavities each in the transmitter and receiver sections. Selectivity and insertion loss may be adjusted by rotating the calibrated connector loops. (See graph for typical response curves.)

Telewave duplexers have 1/4-inch aluminum top plates which are fully welded to the aluminum outer conductor.

As a result of their superior construction, Telewave 8" cavity duplexers achieve greater rejection of transmitter noise and spurious radiation, providing excellent receiver protection.

Silver-plated tuners, beryllium copper finger stock contactors, and threaded Invar rods assure maximum temperature stability, higher "Q", and many years of trouble-free operation.

TPRD-4544, 4744 PASS / REJECT DUPLEXER

The Telewave TPRD-4544/4744 Base Station duplexers provide high performance with an innovative design. By using two TPRC-4504 or 4704 Pass / Reject cavities in the transmitter and receiver path, these duplexers provide maximum TX to RX protection in the most severe RF environments.

The design of these duplexers provides a bandpass characteristic with minimum insertion loss, while also providing maximum TX to RX protection. Adjustable coupling optimizes the required attenuation for ideal RX performance. All cavity inputs are electrically shorted to ground for maximum static and noise protection.

RG-214 Mil-Spec cable is used for all interconnections to ensure long life, and lowest insertion loss with maximum power handling capability. Heavy-duty materials are used in construction of these duplexers, including silver-plated tuners and beryllium copper fingerstock contactors, assuring high "Q" performance with no problems due to dissimilar metals. Tuning is simple and remains stable from -30°C to +70°C, thanks to the threaded Invar rod.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. No further adjustments should be required.

The positive locking mechanism allows for simple field tuning if frequency changes are required.

TPRD-4544/4744 duplexers mount on a 19" standard rack, with panel height of 5.25". Power handling is 250 watts. Receiver desense protection is at least 90 dB, and TX sideband suppression is at least 75 dB.

With TX to RX spacing of 3 MHz or more, this duplexer can also combine two transmitters into one antenna, or feed two receivers. For spacing less than 3 MHz, please contact Telewave for assistance.

TPRD-4546

UHF BANDPASS / BANDREJECT DUPLEXER

The Telewave TPRD-4546 UHF duplexer allows simultaneous operation of a transmitter or combiner and receiver into a common antenna. This band-pass/band-reject duplexer provides maximum TX-to-RX isolation with minimum insertion loss. Six 4" high "Q" cavities in a pass/reject configuration provide better isolation with close frequency spacing than an equivalent bandpass-only duplexer.

The TPRD-4546 can also be configured for at least 1.2 MHz pass and reject bandwidth with rated attenuation.

The superior construction of Telewave duplexers allows the highest possible rejection of transmitter spurious radiation and noise, providing maximum protection for the receiver system.

Heavy-duty materials are used throughout to insure top performance and long service. Each cavity is constructed with a 1/4" aluminum top plate which is fully welded to the cavity body.

RG-214 Mil-Spec cable is used for the interconnect, and temperature stability is maintained by the use of a threaded Invar tuning rod. Tuners are all silver-plated, and sliding contacts are manufactured from beryllium copper fingerstock.

The TPRD-4546 is rack mounted on a 7" x 19" panel. Selectivity and insertion loss are adjustable as required. All duplexers are tuned and tested with customer specified frequencies prior to shipping, and no further adjustment should be required before installation.

TPRD-4554, 4556 PASS / REJECT DUPLEXERS

TPRD-4554

TPRD-4556

Telewave TPRD-4554 and TPRD-4556 duplexers allow simultaneous operation of a transmitter and receiver into a common antenna. These pass-reject duplexers are ideal for systems with very close frequency spacing of 1 MHz or more.

The Telewave TPRD-4554 has two $\frac{3}{4}$ -wave pass-reject cavities in the transmitter and receiver sections. The TPRD-4556 has three $\frac{3}{4}$ -wave pass-reject cavities in the transmitter and receiver sections for additional isolation.

Because of their superior construction, these Telewave 5" cavity duplexers achieve greater rejection of transmitter noise and spurious radiation, providing excellent receiver protection.

Telewave duplexers have $\frac{1}{4}$ " aluminum top plates which are fully welded to the aluminum outer conductor. Silver-plated tuners, beryllium copper finger stock contactors and threaded Invar rods assure maximum temperature stability, higher "Q", and many years of trouble free operation.

Selectivity and insertion loss may be adjusted by rotating the calibrated connector loops. (See next page for typical response curves.)

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. If frequency changes are required, the positive locking mechanism allows for easy field tuning by rotating the threaded Invar rod.

The optional TBC-40 indoor cabinet completely encloses the duplexer, and protects it from dust, dirt and tampering. All connections are accessible from the top of the cabinet.

TTPD-7644

BANDPASS / BANDREJECT DUPLEXER

The Telewave TTPD-7644 Base Station Duplexer is designed specifically for the 763-869 MHz Public Safety frequency band. Four Bandpass / Band-Reject cavities utilize an exclusive Telewave coupling technique to provide a true bandpass response, while rejecting a specified frequency band.

Maximum transmitter-to-receiver protection is achieved across the full transmitter and receiver bands, with very low insertion loss.

The TTPD-7644 is a compact, rack mounted duplexer on a 5.25" x 19" panel, with a power rating of 650 watts. Heavy duty materials including ¼-inch top and bottom plates add to the rugged design of this duplexer.

All connectors and tuners are silver-plated, and beryllium copper

finger stock contactors assure long life, high "Q" performance, and mechanical stability.

Solid copper semi-rigid cable and non-ferromagnetic materials virtually eliminate internal intermod generation.

A threaded Invar tuning rod and temperature compensator provide frequency stability across the full temperature range. All cavity inputs are heavily grounded for greatest static and lightning protection.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. No further adjustments should be required. The positive locking mechanism makes field-tuning simple if frequency changes are necessary.

TTPD-8642, TTPD-8644 BANDPASS / BAND-REJECT DUPLEXERS

TTPD-8642

TTPD-8644

The Telewave TTPD-8642 and TTPD-8644 Base Station duplexers are designed for the 806-960 MHz frequency band. Bandpass / Band-Reject cavities utilize an exclusive Telewave coupling technique to provide a true bandpass response, while rejecting a specified frequency band.

Maximum transmitter-to-receiver protection is achieved across the full transmitter and receiver bands, with very low insertion loss.

The TTPD-8642 and TTPD-8644 are compact, rack mounted duplexers on a 5.25" x 19" panel, with a power rating of 350 and 650 watts. Heavy duty materials which include 1/4-inch top and bottom plates add to the rugged design of these duplexers.

All connectors and tuners are silver-plated, and beryllium copper finger stock contactors assure long life, high "Q" performance, and mechanical stability.

Solid copper semi-rigid cable and non-ferromagnetic materials virtually eliminate internal intermod generation

A threaded Invar tuning rod and temperature compensator provide frequency stability across the full temperature range. All cavity inputs are heavily grounded for greatest static and lightning protection.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. No further adjustments should

be required. The positive locking mechanism makes field-tuning simple if frequency changes are necessary.

TPRD-8644 PASS/REJECT DUPLEXER

The Telewave TPRD-8644 Base Station Duplexer provides high performance and high reliability for the 760 or 860 MHz Public Safety and trunking bands. This duplexer can be easily reconfigured for transition from one band to the other. With two Pass/Reject cavities in each transmitter and receiver path, these duplexers provide maximum TX to RX protection in dense RF environments.

Mil-Spec semi-rigid cable is used for all interconnections to ensure long life, and lowest insertion loss with maximum power handling capability

Heavy-duty materials are used in construction of this duplexer, including silver-plated tuners and beryllium copper fingerstock contactors, assuring high "Q"

performance with no problems due to dissimilar metals. Heliarc welded top and bottom plates ensure reliable, noise-free operation. Tuning is simple and remains stable from -30° C to +70° C, thanks to the threaded Invar tuning rod.

Adjustable coupling optimizes the required attenuation for ideal RX performance. All cavity inputs are electrically shorted to ground for maximum static and noise protection.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. No further adjustments should be required. The positive locking mechanism allows for easy field tuning if frequency changes are implemented.

The TPRD-8644 mounts on a 19" standard rack, with panel height of 5.25". Power handling is 250 watts. Receiver desense protection is at least 80 dB, and TX sideband suppression is at least 80 dB.

With TX to RX spacing of 5 MHz or more, this duplexer can combine two transmitters into one antenna, or feed two receivers. For spacing less than 5 MHz, please contact Telewave for additional information.

TPRD-9044 PASS/REJECT DUPLEXER

The Telewave TPRD-9044 Base Station Duplexer provides high performance and high reliability for 900 MHz radio systems. With two Pass/Reject cavities in each transmitter and receiver path, these duplexers provide maximum TX to RX protection in dense RF environments.

Mil-Spec semi-rigid cable is used for all interconnections to ensure long life, and lowest insertion loss with maximum power handling capability.

Heavy-duty materials are used in construction of this duplexer, including silver-plated tuners and beryllium copper fingerstock contactors, assuring high "Q" performance with no problems due to dissimilar metals. Tuning is simple and remains stable from -30° C to +70° C, thanks to the threaded Invar tuning rod.

Adjustable coupling optimizes the required attenuation for ideal RX performance. All cavity inputs are electrically shorted to ground for maximum static and noise protection.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. No further adjustments should be required. The positive locking mechanism allows for easy field tuning if frequency changes are implemented.

The TPRD-9044 mounts on a 19" standard rack, with panel height of 5.25". Power handling is 250 watts. Receiver desense protection is at least 80 dB, and TX sideband suppression is at least 80 dB.

With TX to RX spacing of 5 MHz or more, this duplexer can combine two transmitters into one antenna,

or feed two receivers. Typical spacing is 39 MHz. Alternate spacing of 3.6 MHz, 9 MHz or other is also available. Frequencies and required spacing must be specified with all orders.

TPCD-8626 COMBLINE DUPLEXER

The Telewave TPCD-8626 Comblines duplexer is specifically designed for use with 800 MHz master antenna systems, supporting trunking and conventional channels with excellent rejection of external noise sources. Maximum transmitter-to-receiver protection is achieved across the full 806-821 and 851-866 MHz bands.

The duplexer consists of two compact comblines filters mounted on a single 5.25" panel, and provides steep-skirt selectivity with minimum insertion loss. All units are tuned and tested with customer specified frequencies for optimum performance. No further field adjustment should be required.

Telewave comblines duplexers offer the ultimate performance for trunking and conventional systems, providing protection against receiver desensitization and interference at congested sites.

ELECTRICAL SPECIFICATIONS	
Frequency range	806-960 MHz

TPCD-8626HP

HIGH POWER COMBLINE DUPLEXER

The Telewave TPCD-8626HP High Power Comblin Duplexer handles 500 watts, and is specially designed for 800 and 900 MHz master antenna systems which require high power handling, sharp selectivity, and very low insertion loss. This duplexer supports systems with large frequency spreads, and ensures suppression of out-of-band emissions (OOBE).

The TPCD-8626HP duplexer consists of two comblin filters with 7-16 DIN connectors on both transmitter and antenna ports. The filters are mounted on a tray with a 19" x 5.25" front panel.

All units are tuned to user-specified frequency bands for optimum performance. No further adjustment is required.

Telewave High Power Comblin Duplexers offer the ultimate performance in trunking and conventional systems, providing protection against receiver desensitization and interference at congested sites.

TMND-0716, 0816

MID-BAND COMPACT DUPLEXERS

Telewave TMND-0716/0816 Mobile Duplexers provide high performance in a compact design. These rugged duplexers are designed for use in base or mobile installations, with minimum space requirements.

Each duplexer consists of six High "Q" helical resonators in a band-reject configuration. This compact design has no exposed interconnect cables. Field tuning can be performed with easily accessible tuning elements on the rear of the unit.

The TMND-0716 and 0816 are designed to operate with at least 4 MHz TX to RX separation. This configuration provides 75 dB of isolation, and low insertion loss permits power handling up to 50 watts.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. When ordering, specify exact frequencies and connector type required (N or BNC).

ELECTRICAL SPECIFICATIONS	
Frequency range (MHz)	0716: 70-78 0816: 77-85
Frequency separation (min)	4 MHz
Maximum input power	50 watts
Impedance / VSWR (max)	50 ohms / 1.5:1
Insertion loss (TX/RX to-antenna)	1.2 dB
TX noise at RX (min)	75 dB
RX attenuation at TX (min)	75 dB
TX-RX Iso. at 4 MHz sep. (min)	75 dB
Temperature range	-20°C to +60°C
Resonators	(6) - 1"
MECHANICAL SPECIFICATIONS	
Dimensions (HWL) in. (cm)	1.2 x 6.1 x 5.4 (3 x 15.5 x 13.7)
Connectors	N or BNC

TMND-7616

700 MHz COMPACT DUPLEXER

The Telewave TMND-7616 Compact Mobile Duplexer is a perfect complement to high performance mobile data systems running on 12.5 and 25 KHz channels.

The TMND-7616 covers 769-775 and 799-805 MHz with full 6 MHz band rejection. The compact size and form factor allow easy integration with any radio layout in all types of vehicles.

Each duplexer consists of six High "Q" helical resonators in a band-reject configuration. Field tuning can be performed if needed with easily accessible tuning elements on the rear of the unit.

The TMND-7616 operates with at least 30 MHz TX to RX separation. This configuration provides 67 dB of isolation, with low insertion loss.

All duplexers are tuned and tested prior to shipping. N female connectors are standard.

ELECTRICAL SPECIFICATIONS	
Frequency range (MHz)	769-775 / 799-805
Frequency separation (min)	30 MHz
Input power	25 watts
Impedance / VSWR (max)	50 ohms / 1.5:1
Insertion loss (TX/RX to antenna)	1.2 dB
TX noise at RX (min)	67 dB
RX attenuation at TX (min)	67 dB
TX-RX Iso. at 30 MHz sep. (min)	67 dB
Temperature range	-20°C to +60°C
Resonators	(6) - 1"
MECHANICAL SPECIFICATIONS	
Dimensions (HWL) in. (cm)	1.25 x 6.0 x 6.5 (3.2 x 15.2 x 16.5)
Connectors	BNC Female or N Female
Finish	Black acrylic enamel
Net weight lb. (kg)	2.0 (0.9)
Shipping weight lb. (kg)	3.0 (1.4)

TMND-8616

800 MHZ COMPACT DUPLEXER

The Telewave TMND-8616 Compact Mobile Duplexer provides high performance in a compact design. This rugged duplexer is designed for use in base or mobile installations, with minimum space requirements.

Each duplexer consists of six High "Q" helical resonators in a band-reject configuration. Field tuning can be performed if needed with easily accessible tuning elements on the rear of the unit.

The TMND-8616 operates with typical 45 MHz TX to RX separation. This configuration provides 70 dB of isolation, and power handling up to 50 watts with low insertion loss.

All duplexers are tuned and tested with customer-specified frequencies prior to shipping. When ordering, specify exact frequencies and connector type required (N or BNC).

ELECTRICAL SPECIFICATIONS	
Frequency range	806-869 MHz
Frequency separation (min / typ)	5 / 45 MHz
Maximum input power	50 watts
Impedance / VSWR (max)	50 ohms / 1.5:1
Insertion loss (TX/RX to-antenna)	1.0 dB
TX noise at RX (min)	70 dB
RX attenuation at TX (min)	70 dB
TX-RX Iso. at 5 MHz sep. (min)	70 dB
Temperature range	-20°C to +60°C
Resonators	(6) - 1"
MECHANICAL SPECIFICATIONS	
Dimensions (HWL) in. (cm)	1.25 x 6.0 x 6.5 (3.2 x 15.2 x 16.5)
Connectors	BNC Female or N Female
Finish	Black acrylic enamel
Net weight lb. (kg)	2.0 (0.9)
Shipping weight lb. (kg)	3.0 (1.4)

7

BASE STATION ANTENNAS

Fiberglass Collinear

Collinear antennas provide a consistent omnidirectional pattern with no external ground plane components. Advanced engineering produces significant gain and frequency range options. Fiberglass composite radomes offer complete protection from severe environments.

Folded Dipole

Telewave Broadband Folded Dipole antennas can be configured for several different horizontal patterns, depending on coverage requirements. Cardioid, offset, and bi-directional patterns are easily produced by adjusting element spacing during or after installation.

Dipole Arrays

Dipole arrays use multiple elements to compress the vertical pattern, providing more gain in a particular direction or protection to or from a nearby system. Electrical and mechanical tilt of 1-15 degrees is possible with two to eight elements.

Yagi

Yagi antennas are rugged, compact devices which produce a very directional horizontal pattern. These antennas are fully sealed and are ideal for control and linking applications.

Wideband

Wideband antennas cover very wide frequency ranges, in discone and handheld configurations. Discone antennas also provide a broad radiation pattern and consistent VSWR.

Power Dividers

RF Power Dividers split a single input into 2, 3, or 4 outputs with impedance matching to ensure 50 ohms at all ports. These dividers handle up to 500 watts of power with no port isolation.

Crossband Couplers

Crossband couplers allow radios in multiple frequency bands to connect to appropriate antennas with a single cable run and very low insertion loss. A pair of devices is typically used for this application, or a single device can couple multiple radios to a single broadband antenna.

COLLINEAR ANTENNAS

Telewave **COOL BLUE™** fiberglass collinear antennas are an industry standard. These antennas are specified by system designers who require their unique combination of wide bandwidth, high performance, gain flexibility, and rugged durability in all environmental conditions.

All Telewave collinear antennas handle 500 watts minimum input power, and are available in eight major frequency bands between 118-965 MHz, with gain from 0 to 10 dBd. Horizontal patterns are omnidirectional, and vertical beamwidth ranges from 7 to 42 degrees depending on gain and frequency.

The Telewave collinear design does not require external ground plane radials, eliminating a major source of failure and RF intermodulation. These antennas are constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection, including a solid copper or brass top cap. All junctions are fully soldered to prevent intermodulation. A heavy-duty 2.75" support pipe made of 6061-T6 aluminum is permanently bonded to an exceptionally strong radome, ensuring years of trouble-free performance.

The **COOL BLUE™** interwoven fiberglass radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives. Wind-load ratings are up to 200 MPH with no ice, and the flexibility of the radome (F6/8/10 models) allows enough antenna motion to resist normal icing, without affecting the pattern. The special radome color helps the antenna blend into the skyline, and absorbs solar radiation to accelerate de-icing.

The standard connector type is a recessed N-female, attached inside the base of the support pipe. A 24" coax jumper is included to simplify installations using hard-line cable. For higher power applications, a 7-16 DIN-F connector can be installed as an option. One set of heavy-duty mounting clamps is included with each antenna.

ANT125F2

FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT125F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to DC ground for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT125F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT125F2 - 127 MHz
Vertical Plane
Gain = 2.56 dBd

SPECIFICATIONS			
Frequency (continuous)	118-136 MHz	Dimensions (L x base diam.) in.	77 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	16 lb.
Power rating (typ.)	500 watts	Shipping weight	20 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.6 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	62 lb.
Vertical beamwidth	38°	Bending moment at top clamp	117 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT135F2

FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT135F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to DC ground for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT135F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT135F2 - 137 MHz
Vertical Plane
Gain = 2.53 dBd

SPECIFICATIONS

Frequency (continuous)	125-150 MHz	Dimensions (L x base diam.) in.	72 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	15 lb.
Power rating (typ.)	500 watts	Shipping weight	19 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.5 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	59 lb.
Vertical beamwidth	38°	Bending moment at top clamp	101 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT140F2 FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT140F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT140F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT140F2 - 150 MHz
Vertical Plane
Gain = 2.51 dBd

SPECIFICATIONS			
Frequency (continuous)	135-165 MHz	Dimensions (L x base diam.) in.	66 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	13 lb.
Power rating (typ.)	500 watts	Shipping weight	17 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.4 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	55 lb.
Vertical beamwidth	38°	Bending moment at top clamp	83 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT150F2 FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT150F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to DC ground for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT150F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT150F2 156 MHz
Vertical Plane
Gain = 2.55 dBd

SPECIFICATIONS			
Frequency (continuous)	148-174 MHz	Dimensions (L x base diam.) in.	60 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	12 lb.
Power rating (typ.)	500 watts	Shipping weight	16 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.3 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	50 lb.
Vertical beamwidth	38°	Bending moment at top clamp	67 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT150F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT150F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection. All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a high-tech, flexible radome to ensure survivability in the worst environments.

The "Cool Blue" radome provides maximum protection from corrosive gases, UV radiation, icing, salt spray, acid rain, and wind blown abrasives. Eight models cover the entire VHF band. Please specify exact frequency and band code (-1, -2, etc.) when ordering.

The ANT150F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

NOTE: THESE ANTENNAS ARE SHIPPED VIA TRUCK FREIGHT ONLY

ANT150F6 - 156 MHz
Vertical Plane
Gain = 6.41 dBd

FREQUENCY RANGES	
ANT150F6-1	138 - 144 MHz
ANT150F6-2	144 - 151 MHz
ANT150F6-3	150 - 157 MHz
ANT150F6-4	156 - 164 MHz
ANT150F6-5	158 - 166 MHz
ANT150F6-6	161 - 168 MHz
ANT150F6-7	167 - 172.5 MHz
ANT150F6-8	171 - 175 MHz

SPECIFICATIONS		138-151 MHz	150-175 MHz
Frequency range	138-175 MHz (8 bands)	Dimensions (L x base diam.)	256" x 2.75" 244" x 2.75"
Gain	6 dBd	Tower weight (Antenna + clamps)	43 lb. 41 lb.
Power rating (typ.)	500 watts	Shipping weight	65 lb. 62 lb.
Impedance	50 ohms	Wind rating / 0.5" ice	150 / 125 MPH
VSWR	1.5:1 or less	Maximum exposed area	4.05 ft. ² 3.97 ft. ²
Pattern	Omnidirectional	Lateral Thrust at 100 MPH	162 lb. 159 lb.
Vertical beamwidth	20°	Bending Moment - top clamp (100 MPH, 40 PSF flat plate equiv.)	1090 ft. lb. 1010 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.		

ANT195F2 FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT195F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection. The ANT195F2 is an excellent choice for SCADA or other whitespace applications, and DTV translators.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT195F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT195F2 - 195 MHz
Vertical Plane
Gain = 2.52 dBd

SPECIFICATIONS			
Frequency (continuous)	174-216 MHz	Dimensions (L x base diam.) in.	53 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	11 lb.
Power rating (typ.)	500 watts	Shipping weight	15 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.2 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	46 lb.
Vertical beamwidth	38°	Bending moment at top clamp	54 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT220F2

FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT220F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection. The ANT220F2 is an excellent choice for wireless PTC systems in urban or rural areas.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT220F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT220F2 - 230 MHz
Vertical Plane
Gain = 2.58 dBd

SPECIFICATIONS			
Frequency (continuous)	195-260 MHz	Dimensions (L x base diam.) in.	51 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	11 lb.
Power rating (typ.)	500 watts	Shipping weight	14 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.1 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	44 lb.
Vertical beamwidth	38°	Bending moment at top clamp	47 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT220F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT220F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection. The ANT220F6 is an excellent choice for wireless PTC systems in urban or rural areas.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT220F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

ANT220F6 - 221 MHz
Vertical Plane
Gain = 6.11 dBd

SPECIFICATIONS			
Frequency (continuous)	216-225 MHz	Dimensions (L x base diam.) in.	171 x 2.75
Gain	6 dBd	Tower weight (antenna + clamps)	35 lb.
Power rating (typ.)	500 watts	Shipping weight	50 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	150 / 125 MPH
VSWR	1.5:1 or less	Maximum exposed area	3.1 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	122 lb.
Vertical beamwidth	20°	Bending moment at top clamp	494 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT355F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT355F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT355F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

ANT355F6 - 355 MHz
Vertical Plane
Gain = 6.27 dBd

SPECIFICATIONS			
Frequency (continuous)	340-370 MHz	Dimensions (L x base diam.) in.	126 x 2.75
Gain	6 dBd	Tower weight (antenna + clamps)	26 lb.
Power rating (typ.)	500 watts	Shipping weight	37 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	150 / 125 MPH
VSWR	1.5:1 or less	Maximum exposed area	2.5 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	99 lb.
Vertical beamwidth	18°	Bending moment at top clamp	263 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT385F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT385F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT385F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

ANT385F6 - 385 MHz
Vertical Plane
Gain = 6.12 dBd

SPECIFICATIONS			
Frequency (continuous)	370-400 MHz	Dimensions (L x base diam.) in.	112 x 2.75
Gain	6 dBd	Tower weight (antenna + clamps)	24 lb.
Power rating (typ.)	500 watts	Shipping weight	35 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	150 / 125 MPH
VSWR	1.5:1 or less	Maximum exposed area	2.3 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	91 lb.
Vertical beamwidth	18°	Bending moment at top clamp	205 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT400F2 FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT400F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT400F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT400F2 - 410 MHz
Vertical Plane
Gain = 2.51 dBd

SPECIFICATIONS			
Frequency (continuous)	360-455 MHz	Dimensions (L x base diam.) in.	44 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	9 lb.
Power rating (typ.)	500 watts	Shipping weight	11 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.0 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	39 lb.
Vertical beamwidth	38°	Bending moment at top clamp	33 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT415F6 FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT415F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT415F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT415F6 - 421 MHz
Vertical Plane
Gain = 6.7 dBd

SPECIFICATIONS			
Frequency (continuous)	405-440 MHz	Dimensions (L x base diam.) in.	101 x 2.375
Gain	6 dBd	Tower weight (antenna + clamps)	22 lb.
Power rating (typ.)	500 watts	Shipping weight	28 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	185 / 155 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.7 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	68 lb.
Vertical beamwidth	18°	Bending moment at top clamp	149 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT415F8

FIBERGLASS COLLINEAR ANTENNA 8 dBd

The Telewave ANT415F8 is an extremely rugged, high-gain fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT415F8 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

ANT415F8 - 420 MHz
Vertical Plane
Gain = 8.68 dBd

SPECIFICATIONS			
Frequency (continuous)	395-436 MHz	Dimensions (L x base diam.) in.	240 x 2.75
Gain	8 dBd	Tower weight (antenna + clamps)	40 lb.
Power rating (typ.)	500 watts	Shipping weight	60 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	150 / 125 MPH
VSWR	1.5:1 or less	Maximum exposed area	3.9 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	157 lb.
Vertical beamwidth	11°	Bending moment at top clamp	975 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT425F2 FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT425F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT425F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT425F2 - 425 MHz
Vertical Plane
Gain = 2.56 dBd

SPECIFICATIONS			
Frequency (continuous)	380-470 MHz	Dimensions (L x base diam.) in.	42 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	9 lb.
Power rating (typ.)	500 watts	Shipping weight	11 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.0 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	38 lb.
Vertical beamwidth	38°	Bending moment at top clamp	30 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT450F2

FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT450F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT450F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT450F2 - 447 MHz
Vertical Plane
Gain = 2.54 dBd

SPECIFICATIONS			
Frequency (continuous)	420-480 MHz	Dimensions (L x base diam.) in.	42 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	9 lb.
Power rating (typ.)	500 watts	Shipping weight	11 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.0 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	38 lb.
Vertical beamwidth	38°	Bending moment at top clamp	30 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT450F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT450F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT450F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT450F6 - 460 MHz
Vertical Plane
Gain = 6.32 dBd

SPECIFICATIONS			
Frequency (continuous)	445-480 MHz	Dimensions (L x base diam.) in.	94 x 2.375
Gain	6 dBd	Tower weight (antenna + clamps)	21 lb.
Power rating (typ.)	500 watts	Shipping weight	26 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	150 / 125 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.5 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	60 lb.
Vertical beamwidth	18°	Bending moment at top clamp	143 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT450F10

FIBERGLASS COLLINEAR ANTENNA 10 dBd

The Telewave ANT450F10 is an extremely rugged, high-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT450F10 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

ANT450F10 - 450 MHz

Pattern	Omnidirectional	Lateral thrust at 100 MPH	159 lb.
Vertical beamwidth	7°	Bending moment at top clamp	1010 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT480F2

FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT480F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT480F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT480F2 - 487 MHz
Vertical Plane
Gain = 2.51 dBd

SPECIFICATIONS			
Frequency (continuous)	450-512 MHz	Dimensions (L x base diam.) in.	42 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	9 lb.
Power rating (typ.)	500 watts	Shipping weight	11 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.0 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	38 lb.
Vertical beamwidth	38°	Bending moment at top clamp	30 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT500F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT500F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT500F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT500F6 - 490 MHz
Vertical Plane
Gain = 6.28 dBd

SPECIFICATIONS			
Frequency (continuous)	470-512 MHz	Dimensions (L x base diam.) in.	89 x 2.375
Gain	6 dBd	Tower weight (antenna + clamps)	20 lb.
Power rating (typ.)	500 watts	Shipping weight	25 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	150 / 125 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.4 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	57 lb.
Vertical beamwidth	19°	Bending moment at top clamp	127 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT500F10

FIBERGLASS COLLINEAR ANTENNA 10 dBd

The Telewave ANT500F10 is an extremely rugged, high-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT500F10 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

ANT500F10 - 495 MHz
Vertical Plane
Gain = 10.06 dBd

SPECIFICATIONS			
Frequency (continuous)	470-512 MHz	Dimensions (L x base diam.) in.	244 x 2.75
Gain	10 dBd	Tower weight (antenna + clamps)	41 lb.
Power rating (typ.)	500 watts	Shipping weight	62 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	150 / 125 MPH
VSWR	1.5:1 or less	Maximum exposed area	4.0 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	159 lb.
Vertical beamwidth	7°	Bending moment at top clamp	1010 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT734-960F2 FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT734-960F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact, wideband antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT734-960F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT734-960F2 - 838 MHz
Vertical Plane
Gain = 2.5 dBd

SPECIFICATIONS			
Frequency (continuous)	734-960 MHz	Dimensions (L x base diam.) in.	38 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	8 lb.
Power rating (typ.)	500 watts	Shipping weight	10 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	0.9 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	35 lb.
Vertical beamwidth	38°	Bending moment at top clamp	23 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT770F2

FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT770F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT770F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT770F2 - 750 MHz
Vertical Plane
Gain = 2.5 dBd

SPECIFICATIONS			
Frequency (continuous)	734-806 MHz	Dimensions (L x base diam.) in.	38 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	8 lb.
Power rating (typ.)	500 watts	Shipping weight	10 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	0.9 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	35 lb.
Vertical beamwidth	38°	Bending moment at top clamp	23 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT770F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT770F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT770F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT770F6 - 776 MHz
Vertical Plane
Gain = 6.15 dBd

SPECIFICATIONS			
Frequency (continuous)	746-806 MHz	Dimensions (L x base diam.) in.	61 x 2.375
Gain	6 dBd	Tower weight (antenna + clamps)	19 lb.
Power rating (typ.)	500 watts	Shipping weight	23 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.1 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	42 lb.
Vertical beamwidth	19°	Bending moment at top clamp	55 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT825F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT825F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT825F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT825F6 - 800 MHz
Vertical Plane
Gain = 6.09 dBd

SPECIFICATIONS			
Frequency (continuous)	745-860 MHz	Dimensions (L x base diam.) in.	59 x 2.75
Gain	6 dBd	Tower weight (antenna + clamps)	18 lb.
Power rating (typ.)	500 watts	Shipping weight	22 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.05 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	41 lb.
Vertical beamwidth	19°	Bending moment at top clamp	52 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT850F2

FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT850F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT850F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT850F2 - 851 MHz
Vertical Plane
Gain = 2.58 dBd

SPECIFICATIONS			
Frequency (continuous)	806-896 MHz	Dimensions (L x base diam.) in.	38 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	8 lb.
Power rating (typ.)	500 watts	Shipping weight	10 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	0.9 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	35 lb.
Vertical beamwidth	38°	Bending moment at top clamp	23 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT850F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT850F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT850F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT850F6 - 850 MHz
Vertical Plane
Gain = 6.16 dBd

SPECIFICATIONS			
Frequency (continuous)	806-896 MHz	Dimensions (L x base diam.) in.	56 x 2.375
Gain	6 dBd	Tower weight (antenna + clamps)	18 lb.
Power rating (typ.)	500 watts	Shipping weight	22 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.0 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	39 lb.
Vertical beamwidth	19°	Bending moment at top clamp	46 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT850F10

FIBERGLASS COLLINEAR ANTENNA 10 dBd

The Telewave ANT850F10 is an extremely rugged, high-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT850F10 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT850F10 - 850 MHz
Vertical Plane
Gain = 10.10 dBd

SPECIFICATIONS			
Frequency (continuous)	806-896 MHz	Dimensions (L x base diam.) in.	83 x 2.375
Gain	10 dBd	Tower weight (antenna + clamps)	19 lb.
Power rating (typ.)	500 watts	Shipping weight	23 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.3 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	53 lb.
Vertical beamwidth	6°	Bending moment at top clamp	106 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT900F2

FIBERGLASS COLLINEAR ANTENNA 2.5 dBd

The Telewave ANT900F2 is an extremely rugged collinear antenna, with moderate gain and wide vertical beamwidth. This compact antenna produces 2.5 dBd gain, and is designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, with a path to ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT900F2 includes the ANTC485 dual clamp set for mounting to a 1.5" to 3" O.D. support pipe, and a 24" removable RG-213 N-Male jumper.

ANT900F2 - 928 MHz
Vertical Plane
Gain = 2.5 dBd

SPECIFICATIONS			
Frequency (continuous)	880-960 MHz	Dimensions (L x base diam.) in.	38 x 2.75
Gain	2.5 dBd	Tower weight (antenna + clamps)	8 lb.
Power rating (typ.)	500 watts	Shipping weight	10 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	0.9 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	35 lb.
Vertical beamwidth	38°	Bending moment at top clamp	23 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT940F6

FIBERGLASS COLLINEAR ANTENNA 6 dBd

The Telewave ANT940F6 is an extremely rugged, medium-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT940F6 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT940F6 - 930 MHz
Vertical Plane
Gain = 6.1 dBd

SPECIFICATIONS			
Frequency (continuous)	870-965 MHz	Dimensions (L x base diam.) in.	56 x 2.375
Gain	6 dBd	Tower weight (antenna + clamps)	18 lb.
Power rating (typ.)	500 watts	Shipping weight	22 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.0 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	39 lb.
Vertical beamwidth	19°	Bending moment at top clamp	46 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT940F10

FIBERGLASS COLLINEAR ANTENNA 10 dBd

The Telewave ANT940F10 is an extremely rugged, high-gain, fiberglass collinear antenna, designed for operation in all environmental conditions. The antenna is constructed with brass and copper elements, connected at DC ground potential for lightning impulse protection.

All junctions are fully soldered to prevent RF intermodulation, and each antenna is completely protected within a rugged, high-tech radome to ensure survivability in the worst environments. The "Cool Blue" radome provides maximum protection from corrosive gases, ultraviolet radiation, icing, salt spray, acid rain, and wind blown abrasives.

The ANT940F10 includes an ANTC482 dual clamp set for mounting to a 1.5" to 3.5" O.D. support pipe, and a 24" removable RG-213 N-Male jumper. Stand-off and top mounts are also available.

ANT940F10 - 930 MHz
Vertical Plane
Gain = 10.12 dBd

SPECIFICATIONS			
Frequency (continuous)	870-965 MHz	Dimensions (L x base diam.) in.	83 x 2.375
Gain	10 dBd	Tower weight (antenna + clamps)	19 lb.
Power rating (typ.)	500 watts	Shipping weight	23 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	200 / 150 MPH
VSWR	1.5:1 or less	Maximum exposed area	1.4 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	55 lb.
Vertical beamwidth	6°	Bending moment at top clamp	112 ft. lb.
Termination	Recessed N Female 7-16 DIN-F opt.	(100 MPH, 40 PSF flat plate equiv.)	

ANT960F0
WIRELESS DATA ANTENNA 2 dBd

The Telewave ANT960F0 "Data Stick" is a rugged, economical omni antenna for wireless data applications in the 900 MHz band. The antenna is constructed entirely from brass internal components, and the durable radome is designed to withstand severe weather and environmental conditions. The radome will not corrode or degrade as a result of exposure to UV, salt water, oil, or most common chemical fumes. Optional mounting hardware is available for various applications.

ANT960F0 - 915 MHz
Vertical Plane
Gain = 2.0 dBd

COLLINEAR

Shown with optional clamp

SPECIFICATIONS			
Frequency range	900-930 / 920-960 MHz	Dimensions (L x base diam.) in.	14.5 x 1
Gain	2 dBd	Antenna weight	1 lb.
Power rating (typ.)	50 watts	Shipping weight	3 lb.
Impedance	50 ohms	Wind rating / with 0.5" ice	90 / 90 MPH
VSWR	1.5:1 or less	Maximum exposed area	0.1 ft. ²
Pattern	Omnidirectional	Lateral thrust at 100 MPH	4 lb.
Vertical beamwidth	42°	Bending moment at top clamp	2 ft. lb.
Termination	Recessed N-Male	(100 MPH, 40 PSF flat plate equiv.)	

INSTALLATION GUIDE FOR COLLINEAR ANTENNAS F2 MODELS

WARNING:

For your safety, do not install any antenna near power lines, and carefully follow all installation instructions. If the antenna falls toward or contacts any overhead wires, immediately let go and stay away. Call the utility company for assistance. Always use safety devices for tower climbing. Ensure that the tower structure is well grounded for lightning protection.

IMPORTANT - BEFORE ASSEMBLING AND MOUNTING:

Carefully read these instructions and study the diagrams. Check to make sure you have all parts. Both clamps must be installed and properly spaced to prevent antenna rotation from wind load.

PARTS LIST

- (1) Antenna assembly
- (1) Jumper RG-213 N-male to N-male 24"
(provided only with N-terminated antennas)
- (1) ANTC485 clamp kit

Clamp Kit Contents (Figure 1):

- (2) Clamp plates
- (2) 3/8"-16 stainless U bolts
- (4) Hex nuts
- (4) Lock washers
- (1) Anti-seize compound

Figure 1: ANTC485 Clamp Kit

Figure 2: Typical Mounting Configuration

MOUNTING INSTRUCTIONS

1. The welded mounting rails are intended to be placed against the support structure when used with the supplied clamp set. When using an ANTC483 or other clamp set, the mounting rails should be turned to one side, out of contact with the support.
2. Apply anti-seize compound to ends of u-bolts. Place a loosely assembled clamp over the top of the mast. Feed the antenna base ferrule down through the clamp until aligned with the upper attachment point. Tighten down the hex nuts and straighten the antenna until clamped into a vertical position.
3. Attach and secure the lower antenna clamp with supplied hex nuts and lock washers, to provide reasonable pressure to the support structure and antenna base ferrule (Figure 2).
4. The antenna input connector is a Type N or 7-16 DIN Female. A 24" N-male jumper is provided for antennas with N input. Connect RF feed cable terminated with Type N or 7-16 DIN as required to antenna input connector. Secure all cables with cable ties.
5. Be sure to properly seal the input connector with waterproof tape or other sealing material. See Telewave TWDS-0502 for a recommended method of connector sealing.

INSTALLATION GUIDE FOR COLLINEAR ANTENNAS F6, F8, AND F10 MODELS

WARNING:

For your safety, do not install any antenna near power lines, and carefully follow all installation instructions. If the antenna falls toward or contacts any overhead wires, immediately let go and stay away. Call the utility company for assistance. Always use safety devices for tower climbing. Ensure that the tower structure is well grounded for lightning protection.

IMPORTANT - BEFORE ASSEMBLING AND MOUNTING:

Carefully read these instructions and study the diagrams. Check to make sure you have all parts. The antenna and clamp kit are packaged as two separate items. Both clamps must be installed and properly spaced to prevent antenna rotation from wind load.

NOTE: To prevent possible damage to the ferrule and radome, tighten all nuts only until the lock washers are flattened. Then add 1/2 turn to each.

PARTS LIST

- (1) Antenna assembly
- (1) Jumper RG-213 N-male to N-male 24"
(provided only with N-terminated antennas)
- (1) ANTC482 clamp kit

Clamp kit Contents (figure 1):

- (8) galvanized clamp plates
- (4) 1/2"-13 x 10" stainless steel threaded rods
- (16) 1/2" stainless steel hex nuts
- (16) 1/2" stainless steel split lock washers
- (1) Anti-seize compound

MOUNTING INSTRUCTIONS

1. Apply anti-seize compound to threaded rod ends. Insert rods through dual clamps with hex nuts and lock washers in the middle of the clamps as shown in figure 2. Mount both clamps to the support structure with 2 single clamp plates, hex nuts, and lock washers. Arrange clamps so that 1"-2" of ferrule is exposed above and below the clamps. Be sure to allow sufficient thread length on the antenna side of the clamps.
2. Attach antenna clamp plate to the upper clamp set only, allowing maximum plate movement on the rods. Feed the antenna base ferrule down through the clamp until aligned with the upper attachment point. Partially tighten the hex nuts and straighten the antenna until clamped into a vertical position.
3. Attach and secure the lower antenna clamp with supplied hex nuts and lock washers, and tighten both clamps until the lock washers are flat plus 1/2 turn additional on each nut. (Figure 3).
4. The antenna input connector is a Type N or 7-16 DIN Female. A 24" N-male jumper is provided for antennas with N input. Connect RF feed cable terminated with Type N or 7-16 DIN as required to antenna input connector. Secure all cables with cable ties.
5. Be sure to properly seal the input connector with waterproof tape or other sealing material. See Telewave TWDS-0502 for a recommended method of connector sealing.

ANTC482 CLAMP SET FOR COLLINEAR ANTENNAS

WARNING:

For your safety, do not install any antenna near power lines, and carefully follow all installation instructions. If the antenna falls toward or contacts any overhead wires, immediately let go and stay away. Call the utility company for assistance. Always use safety devices for tower climbing. Ensure that the tower structure is well grounded for lightning protection.

IMPORTANT - BEFORE ASSEMBLING AND MOUNTING:

Carefully read these instructions and study the diagrams. Check to make sure you have all parts. The antenna and clamp kit are packaged as two separate items. Both clamps must be installed and properly spaced to prevent antenna rotation from wind load.

NOTE: To prevent possible damage to the ferrule and radome, tighten all nuts only until the lock washers are flattened. Then add 1/2 turn to each.

PARTS LIST (Figure 1)

- (8) galvanized clamp plates
- (4) 1/2"-13 x 10" stainless steel threaded rods
- (16) 1/2" stainless steel hex nuts
- (16) 1/2" stainless steel split lock washers
- (1) Anti-seize compound

MOUNTING INSTRUCTIONS

Apply anti-seize compound to threaded rod ends. Insert rods through dual clamps with hex nuts and lock washers in the middle of the clamps as shown in figure 2. Mount both clamps to the support structure with 2 single clamp plates, hex nuts, and lock washers. Arrange clamps so that 1"-2" of ferrule is exposed above and below the clamps. Be sure to allow sufficient thread length on the antenna side of the clamps. Tighten clamps only until lockwashers are flat, then add 1/2 turn additional on each nut.

Clamp Preassembly

Dimensional Data:

ANTC482 can be attached to square or round tower legs from 1.5" to 3.5" O.D.

Clamp holes are 9/16" diameter, and 4.75" inches center to center.

ANTC483/483SS CLAMP SET FOR COLLINEAR ANTENNAS

WARNING:

For your safety, do not install any antenna near power lines, and carefully follow all installation instructions. If the antenna falls toward or contacts any overhead wires, immediately let go and stay away. Call the utility company for assistance. Always use safety devices for tower climbing. Ensure that the tower structure is well grounded for lightning protection.

IMPORTANT - BEFORE ASSEMBLING AND MOUNTING:

Carefully read these instructions and study the diagrams. Check to make sure you have all parts. The antenna and clamp kit are packaged as two separate items. Both clamps must be installed and properly spaced to prevent antenna rotation from wind load.

NOTE: To prevent possible damage to the ferrule and radome, tighten all nuts only until the lock washers are flattened. Then add 1/2 turn to each.

PARTS LIST (Figure 1)

- (4) Tower or antenna (single) galvanized clamp plates
- (2) Welded (dual) galvanized clamp plates
- (4) 1/2"-13 x 10" stainless steel threaded rods
- (12) 1/2" stainless steel hex nuts
- (8) 1/2" stainless steel split lock washers
- (1) Anti-seize compound

MOUNTING INSTRUCTIONS

Apply anti-seize compound to threaded rod ends. Insert rods through dual clamps with hex nuts and lock washers in the middle of the clamps as shown in figure 2. Mount both clamps to the support structure with 2 single clamp plates, hex nuts, and lock washers. Arrange clamps so that 1"-2" of ferrule is exposed above and below the clamps. Be sure to allow sufficient thread length on the antenna side of the clamps. Tighten clamps only until lockwashers are flat, then add 1/2 turn additional on each nut.

Figure 1:
Clamp Set Contents

Figure 2:
Clamp Preassembly

Figure 3: Assembly (end view)

Dimensional Data:

ANTC483 and 483SS can be attached to square or round tower legs from 1.5" to 3.5" O.D. Clamp holes are 9/16" diameter, and 4.75" inches center to center.

DIPOLE ANTENNAS

Telewave Dipole and Dipole Array antennas are built in the USA to withstand harsh conditions in the most demanding applications. Telewave dipoles are in service on mountaintops in Alaska, oil rigs in the Gulf of Mexico, Phillipine jungles, and the deserts of North Africa. Constructed from 6061-T6 aluminum, Telewave Dipoles feature broad bandwidth, and superior lightning impulse protection thanks to direct DC ground construction.

Telewave dipole antennas and arrays also feature a high-tech coating called *Txytan™*, which completely encapsulates all metal antenna components, providing total protection from water, corrosive chemicals, salt spray, and windblown abrasives. This smooth black coating also dramatically reduces surface friction, reducing and often preventing ice adhesion, while improving absorption of solar radiation.

All cabling is Mil-Spec RG-213/U, and all external connection points are sealed with Telewave's field-proven *MilleniumSeal™*, which provides permanent environmental protection. The RF feed cable and connection to each element is internally sealed within the element, eliminating any possibility of failure due to corrosion or ice expansion.

The standard connector type is N-Male, and 7-16 DIN can be installed as an option for high power applications. Gain ranges from 1 to 12 dBd, depending on configuration and number of elements. Each lowband model from 33-48 MHz includes a heavy-duty clamp set to attach the antenna boom to a mast or tower, as well as one element support boom with all required clamps.

All dipoles above 54 MHz are UPS shippable, and the horizontal pattern on all models is fully adjustable at any time during or after installation. This unique flexibility means that a single or multi-dipole array can provide a semi-directional, bi-directional, or nearly omni radiation pattern. Up to 15 degrees of mechanical and/or electrical tilt is also available for arrays of 2 or more dipoles, allowing a level of pattern control not possible with other antenna types.

ANT37D DIPOLE ANTENNA

The Telewave ANT37D is a rugged, high-performance single dipole antenna designed for VHF lowband services, including public safety, utilities, paging links and military communication. This antenna provides 7.5 MHz bandwidth with no tuning required, and multiple elements can be stacked for increased gain and pattern control.

Each antenna is constructed with 6061-T6 aluminum, and is welded at the base to a solid, machined aluminum mounting block for maximum strength. A massive 3.5" diameter boom provides exceptional strength.

Each antenna is also completely sealed with our high-tech Txylan™ coating, which resists water and ice buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives.

ANT37D antennas include ANTC482 mounting hardware which will accommodate a 1.5"-3.5" diameter galvanized steel support pipe or tower leg. One ANTLBB element support boom with all required clamps is also included.

Due to the size and potential wind loading of this antenna, tower side mounting is recommended.

DIPOLES

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

SPECIFICATIONS	
Frequency (continuous)	33.5-41 MHz
Power rating (typ.)	500 watts
Impedance	50 ohms
VSWR	1.5:1 or less
Pattern	Offset circular
Lightning protection	DC Ground
Termination	N-Male or 7-16 DIN (opt.) on harness feed cable
Gain	2.5 dBd (typ.)
Vertical beamwidth	78°
Horizontal beamwidth	170° (typ.)
Dipole dimensions (H x W)	145 x 9 in.
Boom dimensions (L x Dia.)	96 x 3.5 in.
Weight (antenna + clamps)	51 lb.
Wind rating / 0.5" ice	125 / 100 MPH
Maximum exposed area	3.8 ft. ²
Lateral thrust at 100 MPH	152 lb

ANT37D at 40 MHz
H-Plane gain 2.6 dBd
1/4 wl. spacing from tower

ANT40D DIPOLE ANTENNA

The Telewave ANT40D is a rugged, high-performance single dipole antenna designed for VHF lowband services, including public safety, utilities, paging links or military communication. This antenna provides 7 MHz bandwidth with no tuning required, and multiple elements can be stacked for increased gain and pattern control.

Each antenna is constructed with 6061-T6 aluminum, and is welded at the base to a solid, machined aluminum mounting block for maximum strength. A massive 3.5" diameter boom provides exceptional strength.

Each antenna is also completely sealed with our high-tech Txylan™ coating, which resists water and ice buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives.

ANT40D antennas include ANTC482 mounting hardware which will accommodate a 1.5"-3.5" diameter galvanized steel support pipe or tower leg. One ANTLBB element support boom with all required clamps is also included.

Due to the size and potential wind loading of this antenna, tower side mounting is recommended.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

SPECIFICATIONS	
Frequency (continuous)	37.5-44.5 MHz
Power rating (typ.)	500 watts
Impedance	50 ohms
VSWR	1.5:1 or less
Pattern	Offset circular
Lightning protection	DC Ground
Termination	N-Male or 7-16 DIN (opt.) on harness feed cable
Gain (typ.)	2.5 dBd
Vertical beamwidth	78°
Horizontal beamwidth	Dependent on pattern
Dipole dimensions (H x W)	129 x 9 in.
Boom dimensions (L x Dia.)	96 x 3.5 in.
Weight (antenna + clamps)	46 lb.
Wind rating / 0.5" ice	125 / 100 MPH
Maximum exposed area	3.6 ft. ²
Lateral thrust at 100 MPH	142 lb

ANT42D DIPOLE ANTENNA

The Telewave ANT42D is a rugged, high-performance single dipole antenna designed for VHF lowband services, including public safety, utilities, paging links or military communication. This antenna provides 8.5 MHz bandwidth with no tuning required, and multiple elements can be stacked for increased gain and pattern control.

Each antenna is constructed with 6061-T6 aluminum, and is welded at the base to a solid, machined aluminum mounting block for maximum strength. A massive 3.5" diameter boom provides exceptional strength.

Each antenna is also completely sealed with our high-tech Txylan™ coating, which resists water and ice buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives.

ANT42D antennas include ANTC482 mounting hardware which will accommodate a 1.5"-3.5" diameter galvanized steel support pipe or tower leg. One ANTLBB element support boom with all required clamps is also included.

Due to the size and potential wind loading of this antenna, tower side mounting is recommended.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

SPECIFICATIONS	
Frequency (continuous)	38.5-47 MHz
Power rating (typ.)	500 watts
Impedance	50 ohms
VSWR	1.5:1 or less
Pattern	Offset circular
Lightning protection	DC Ground
Termination	N-Male or 7-16 DIN (opt.) on harness feed cable
Gain (typ.)	2.5 dBd
Vertical beamwidth	78 degrees
Horizontal beamwidth	180 degrees
Dipole dimensions (H x W)	126 x 9 in.
Boom dimensions (L x Dia.)	78 x 3.5 in.
Weight (antenna + clamps)	41 lb.
Dipole spacing from tower	69 in.
Wind rating / 0.5" ice	125 / 100 MPH
Maximum exposed area	3.3 ft. ²
Lateral thrust at 100 MPH	132 lb

ANT44D DIPOLE ANTENNA

The Telewave ANT44D is a rugged, high-performance single dipole antenna designed for VHF lowband services, including public safety, utilities, paging links or military communication. This antenna provides 6.5 MHz bandwidth with no tuning required, and multiple elements can be stacked for increased gain and pattern control.

Each antenna is constructed with 6061-T6 aluminum, and is welded at the base to a solid, machined aluminum mounting block for maximum strength. A massive 3.5" diameter boom provides exceptional strength.

Each antenna is also completely sealed with our high-tech Txylan™ coating, which resists water and ice buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives.

ANT44D antennas include ANTC482 mounting hardware which will accommodate a 1.5"-3.5" diameter galvanized steel support pipe or tower leg. One ANTLBB element support boom with all required clamps is also included.

Due to the size and potential wind loading of this antenna, tower side mounting is recommended.

NOTE: THIS ANTENNA IS SHIPPED VIA TRUCK FREIGHT ONLY

SPECIFICATIONS	
Frequency (continuous)	41.5-48 MHz
Power rating (typ.)	500 watts
Impedance	50 ohms
VSWR	1.5:1 or less
Pattern	Offset circular
Lightning protection	DC Ground
Termination	N-Male or 7-16 DIN (opt.) on harness feed cable
Gain (typ.)	2.5 dBd
Vertical beamwidth	78 degrees
Horizontal beamwidth	Dependent on pattern
Dipole dimensions (H x W)	120 x 9 in.
Boom dimensions (L x Dia.)	78 x 3.5 in.

ANT70D

DIPOLE ANTENNA

The Telewave ANT70D is a rugged, high-performance single dipole antenna designed for VHF midband services, including utilities, paging links, control stations, and military communication. This antenna provides 15 MHz bandwidth with no tuning required. The horizontal pattern is adjustable, and multiple elements can be stacked for increased gain and pattern control.

Each antenna is constructed with 6061-T6 aluminum, and is welded at the base for maximum strength.

Each antenna is also completely sealed with our high-tech Txylan™ coating, which resists water and ice buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives.

All components are at DC ground potential for lightning protection. A full clamp set is included for mounting to a 1.5"-3.5" diameter galvanized steel support pipe or tower leg.

SPECIFICATIONS	
Frequency (continuous)	63-78 MHz
Power rating (typ.)	500 watts
Impedance	50 ohms
VSWR	1.5:1 or less
Pattern	Adjustable for offset circular, cardioid, or bidirectional
Lightning protection	DC Ground
Termination	N-Male or 7-16 DIN (opt.) on harness feed cable
Gain (dependent on pattern)	1-2.5 dBd
Vertical beamwidth	78°
Horizontal beamwidth	Dependent on pattern
Dipole dimensions (H x W)	76 x 7 in.
Boom dimensions (L x Dia.)	84 x 2.25 in.
Weight (antenna + clamps)	21 lb.
Wind rating / 0.5" ice	125 / 100 MPH
Maximum exposed area	2.7 ft. ²
Lateral thrust at 100 MPH	109 lb

H-Plane gain 2.6 dBd
1/4 wl. spacing from tower

ANT70D at 70 MHz

H-Plane gain 0.7 dBd
3/8 wl. spacing from tower

ANT75D DIPOLE ANTENNA

The Telewave ANT75D is a rugged, high-performance single dipole antenna designed for VHF midband services, including utilities, paging links, control stations, and military communication. This antenna provides 22 MHz bandwidth with no tuning required. The horizontal pattern is adjustable, and multiple elements can be stacked for increased gain and pattern control.

Each antenna is constructed with 6061-T6 aluminum, and is welded at the base for maximum strength.

Each antenna is also completely sealed with our high-tech Txylan™ coating, which resists water and ice buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives.

All components are at DC ground potential for lightning protection. A full clamp set is included for mounting to a 1.5"-3.5" diameter galvanized steel support pipe or tower leg.

SPECIFICATIONS	
Frequency (continuous)	66-88 MHz
Power rating (typ.)	500 watts
Impedance	50 ohms
VSWR	1.5:1 or less
Pattern	Adjustable: Offset circular, cardioid, or bidirectional
Lightning protection	DC Ground
Termination	N-Male or 7-16 DIN (opt.) on harness feed cable
Gain (dependent on pattern)	1-2.5 dBd
Vertical beamwidth	78°
Horizontal beamwidth	Dependent on pattern
Dipole dimensions (H x W)	72 x 7 in.
Boom dimensions (L x Dia.)	65 x 2.25 in.
Weight (antenna + clamps)	21 lb.
Wind rating / 0.5" ice	125 / 100 MPH
Maximum exposed area	2.3 ft. ²
Lateral thrust at 100 MPH	92 lb

H-Plane gain 2.6 dBd
1/4 wl. spacing from tower

ANT75D at 75 MHz

H-Plane gain 0.7 dBd
3/8 wl. spacing from tower

ANT90D

DIPOLE ANTENNA - FM BROADCAST

The Telewave ANT90D is a rugged, high-performance single dipole antenna designed for the FM broadcast band. This antenna provides 20 MHz bandwidth with no tuning required. The horizontal pattern is adjustable, and multiple elements can be stacked for increased gain and pattern control. This antenna is ideal for LPFM and translator stations for fill-in or small-market coverage.

Each dipole element is constructed with 6061-T6 aluminum, and welded at the base for maximum strength. Each element is also completely sealed with our high-tech Txytan™ coating, which resists water and ice

buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives.

All components are at DC ground potential for lightning protection. A full clamp set is included for mounting to a 1.5"-3.5" diameter galvanized steel support pipe or tower leg.

Up to 15 degrees of electrical uptilt or downtilt can be specified for multiple element arrays. Desired tilt angle must be included with the order, and consultation with our antenna engineering staff is requested.

SPECIFICATIONS	
Frequency (continuous)	88-108 MHz
Power rating (typ.)	500 watts
Impedance	50 ohms
VSWR	1.5:1 or less
Pattern	Adjustable: Offset circular, cardioid, or bidirectional
Lightning protection	DC Ground
Termination	N-Male or 7-16 DIN (opt.) on harness feed cable
Gain (dependent on pattern)	1 - 2.05 dBd
Vertical beamwidth	1/4 wl. - 70°, 1/2 wl. - 73° 3/8 wl. - 84°
Horizontal beamwidth	1/4 wl. - 210°, 1/2 wl. - 88° 3/8 wl. - 240°
Dimensions (H x mast distance) max	56 x 57 in.
Weight (antenna + clamps)	18 lb.
Wind rating / 0.5" ice	125 / 100 MPH
Maximum exposed area	1.9 ft. ²
Lateral thrust at 100 MPH	74 lb.

ANT120D, D3 DIPOLE AND DIPOLE ARRAY

The Telewave ANT120D series consists of a rugged, high-performance single dipole and dual dipole array with a precision phasing harness, designed for aircraft communications, telemetry, and military applications. The horizontal pattern is adjustable, and each element can be configured for increased gain and pattern control.

Each dipole element is constructed with 6061-T6 aluminum, and welded at the base for maximum strength. Each element is also completely sealed with our high-tech Txylan™ coating, which resists water and ice buildup, and provides exceptional protection from corrosive gases, UV

radiation, salt spray, acid rain and windblown abrasives. The phasing harness is fully sealed by Telewave's Millenium Seal™ technology.

All components are at DC ground potential for lightning protection. Each dipole element includes a heavy-duty custom clamp set for mounting to a 1.5"-2.5" diameter galvanized steel support pipe or tower leg.

Up to 15 degrees of electrical uptilt or downtilt may be specified for D3 models. Desired tilt angle must be included with the order, and consultation with our antenna engineering staff is requested.

ANT150D, D3, D6-9 DIPOLE AND DIPOLE ARRAY 1 TO 9 dBd

The Telewave ANT150D series consists of single, dual, and 4-element dipole array antennas with a precision phasing harness for optimum performance. The horizontal pattern is field-adjustable for any current or future coverage requirements. The wide bandwidth and high efficiency of these antennas make them ideal for applications including trunking, business, public safety, and amateur radio.

Each dipole element is constructed with 6061-T6 aluminum, and welded at the base for maximum strength. Each element is also completely sealed with our high-tech Txytan™ coating, which resists water and ice

buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives. The phasing harness is fully sealed by Telewave's Millennium Seal™ technology.

All components are at DC ground potential for lightning protection. Each dipole element includes a heavy-duty custom clamp set for mounting to a 1.5"-2.5" diameter galvanized steel support pipe or tower leg.

ANT350D, D3, D6-9 DIPOLE AND DIPOLE ARRAY 1 TO 9 dBd

The Telewave ANT350D series consists of single, dual, and 4-element dipole array antennas with a precision phasing harness for optimum performance. The antenna horizontal pattern is field-adjustable, for any current or future coverage requirements. The wide bandwidth and high efficiency of these antennas make them ideal for many applications, including military communications, trunking, and business.

Each dipole element is constructed with 6061-T6 aluminum, and welded at the base for maximum strength. Each antenna is also completely sealed with our high-tech Txytan™ coating, which resists water and ice

buildup, and provides exceptional protection from corrosive gases, UV radiation, salt spray, acid rain and windblown abrasives. The phasing harness is fully sealed by Telewave's Millenium Seal™ technology.

All components are at DC ground potential for lightning protection. Each dipole element includes a heavy-duty custom clamp set for mounting to a 1.5"-2.5" diameter galvanized steel support pipe or tower leg.

Up to 15 degrees of electrical uptilt or downtilt may be specified for D3 or D6-9 models. Desired tilt angle must be included on the order, and consultation with our antenna engineering staff is requested.

FOLDED DIPOLE ANTENNAS 138-825 MHz

MOUNTING INSTRUCTIONS

WARNING:

For your safety, do not install any antenna near power lines, and carefully follow all installation instructions. If the antenna falls toward or contacts any overhead wires, immediately let go and stay away. Call the utility company for assistance. Always use safety devices for tower climbing. Ensure that the tower structure is well grounded for lightning protection.

PARTS LIST (for single dipole element):

(1)	Dipole and clamp set	(1)	1/4"-20 hex bolt	(1)	1/4"-20 lock nut
(2)	3/8" x 3.5" hex bolt	(2)	3/8" hex nut	(2)	3/8" split lock washer
(1)	Anti-seize compound				

ASSEMBLY INSTRUCTIONS

- Remove components from shipping box and lay out the dipole and cable assemblies, ideally in a large, sheltered area. Arrange the assemblies in order as cable lengths allow.
- Refer to the diagram. Slide the boom over the dipole hub, and align the holes in the boom with the holes in the hub. Apply anti-seize compound to the bolt end, then install and tighten the 1/4"-20 bolt and lock nut. Press the end plug located on the dipole feed cable into the end of the boom until it is firmly seated.
- Refer to the appropriate Dipole Pattern Adjustment sheet for the frequency range of the antenna. Using the chart titled "Dipole Mounting and Mast Specifications", measure and mark the support structure for the proper dipole element spacing. Mount each dipole assembly to the mast with clamps as shown in the diagram. Locate the drain hole on each element, and be certain it is pointing down.
- Refer to the chart titled "Mast to Dipole Dimensions", and determine the proper horizontal element spacing from the mast or support structure for the desired coverage pattern. **At least 1/2 inch of the boom should be visible on the back side of the clamps.**
- Apply anti-seize compound to the bolt ends, then secure the dipole assemblies to the support with the supplied 3/8" nuts, washers and bolts, while adjusting each dipole position on the support. Tighten each nut until the lock washer is flat, then add 1/2 turn. Be sure to properly seal the input connector with waterproof tape or other sealing material. See Telewave TWDS-0502 for a recommended method of connector sealing.
- Secure the cable assembly to the support.

DIPOLE PATTERN ADJUSTMENT

Telewave folded dipoles are field adjustable to provide different horizontal patterns and gain values. The horizontal spacing from tower between the dipole and the support mast or tower leg controls this adjustment. Review the patterns below to determine which is best suited to your range area requirements. Use the chart on the next page to find the appropriate dimension for antenna to mast spacing. The drawing at the bottom shows how this measurement is made and the vertical spacing to be used for multi-element arrays.

Horizontal radiation patterns

Offset Circular
1/4 wavelength spacing

Cardioid
3/8 wavelength spacing

Bi-directional
1/2 wavelength spacing

IMPORTANT: Be sure that the drain holes are on the bottom when the elements are installed.

DIPOLE PATTERN ADJUSTMENT

DIPOLE MOUNTING AND MAST SPECIFICATIONS

Mast lengths shown are minimum acceptable lengths to insure proper pattern control. Mast extension is applied at top and bottom of array. Longer masts are acceptable, but the dipole or array must be centered on the support to prevent beam tilt. The clamps provided with the dipoles will work properly to attach the dipole boom to a mast that is between 1.5 to 2.5 inches in diameter. To attach to smaller supports (1-1.5" diameter), use ANTS420 shims. This allows direct mounting to small towers such as the Rohn 25 and 45.

NOTE: The physical characteristics of large dipoles require a correction factor from calculated values for mast spacing. The dimensions in the above table include this correction.

DIPOLE PATTERN ADJUSTMENT

Telewave folded dipoles are field adjustable to provide different horizontal patterns and gain values. The horizontal spacing from tower between the dipole and the support mast or tower leg controls this adjustment. Review the patterns below to determine which is best suited to your range area requirements. Use the chart on the next page to find the appropriate dimension for antenna to mast spacing. The drawing at the bottom shows how this measurement is made and the vertical spacing to be used for multi-element arrays.

Horizontal radiation patterns

Offset Circular
1/4 wavelength spacing

Cardioid
3/8 wavelength spacing

Bi-directional
1/2 wavelength spacing

IMPORTANT: Be sure that the drain holes are on the bottom when the elements are installed.

DIPOLE PATTERN ADJUSTMENT

DIPOLE MOUNTING AND MAST SPECIFICATIONS

Mast lengths shown are minimum acceptable lengths to insure proper pattern control. Mast extension is applied at top and bottom of array. Longer masts are acceptable, but the dipole or array must be centered on the support to prevent beam tilt. The clamps provided with the dipoles will work properly to attach the dipole boom to a mast that is between 1.5 to 2.5 inches in diameter. To attach to smaller supports (1-1.5" diameter), use ANTS420 shims. This allows direct mounting to small towers such as the Rohn 25 and 45.

YAGI ANTENNAS

Telewave Yagi antennas are some of the strongest and most reliable in the industry. These antennas are designed using sophisticated CAD and pattern modelling software, and manufactured to endure the harshest environments without failure or degradation of performance. Telewave Yagi antennas are fabricated from all-aluminum or all-brass stock, using solid elements and heavy-wall tubular booms, with fully welded or soldered joints. For the most extreme environments, certain models can be fabricated from stainless steel for ultimate durability.

The RF connector is permanently mounted in end of the boom to form a single, integrated unit, except for the Y10H series, which uses a weatherproof pigtail. A solid internal conductor is sealed within the boom, and feeds a sealed active element, eliminating any possibility of failure due to corrosion or ice expansion. Telewave Yagi antennas also feature our high-tech coating called Txylan™, which completely encapsulates all our Yagi antennas, providing total protection from water, corrosive chemicals, salt spray, and windblown abrasives. This smooth black coating also dramatically reduces surface friction, reducing and often preventing ice adhesion, while improving absorption of solar radiation.

The standard connector type is N Female, and a 7-16 DIN-F can be installed as an option for higher power applications. Gain ranges from 5 to 12 dBd, and higher gains are available on request. Certain models are available with a 90-degree feed option, which allows Heliac® or other hardline coax to be terminated directly at the antenna, without additional flexible jumpers. All Telewave Yagis can be ordered to accommodate vertical or horizontal polarization, and many models allow the use of our Universal Mount, which provides a high degree of adjustability for mounting antennas to non-vertical supports. Many models from 450-2700 MHz are small enough to be handheld, and are ideal for interference location and field testing.

ANT144Y5-WR

YAGI ANTENNA 5 dBd

The Telewave ANT144Y5-WR is a high performance directional antenna, designed especially for point to point as well as point/multipoint applications. This antenna produces 5 dBd forward gain with an excellent front-to-back ratio, and solid aluminum elements with 360° welds prevent intermodulation and provide exceptional strength.

Each antenna is completely protected with our high-tech Txylan™ coating, which provides icing resistance and protection

from corrosive gases, UV radiation, salt spray, acid rain and wind-blown sand. The feed line is protected within the boom, and the radiating element is completely sealed against ice and other hazards with a tough, RF-transparent radome.

The ANT144Y5-WR includes a welded vertical plate and mast clamp set. A horizontal welded plate is optional, or the ANTM400H adapter can be used. The clamp set fits any vertical mast or tower support from 1.5"-3.5" O.D.

ANT150Y10H

YAGI ANTENNA 10 dBd

The Telewave ANT150Y10H is a very rugged, high performance directional antenna. Six elements provide a minimum of 10 dBd gain, high front-to-back ratio, and wide band capability. The elements are constructed from solid aluminum to prevent intermodulation and provide exceptional strength.

Each antenna is completely protected with our high-tech Txylan™ coating, which provides icing resistance and protection from corrosive gases, UV radiation, salt spray, acid rain and wind-blown sand. The feed line is protected within the boom, and the radiating element is completely sealed

against ice and other hazards. All antenna components are at DC ground for lightning protection.

The ANT150Y10H includes a heavy duty clamp set, which allows the antenna boom to be rotated for polarization adjustment. (Please contact Telewave if horizontal operation is planned.)

This clamp set secures the antenna to a vertical or horizontal mast or tower support from 1.5"-3.5" O.D. The antenna is shipped unassembled to reduce cost, and is easily assembled in the field with color coded marks.

ANT450Y10-WR

YAGI ANTENNA 10 dBd

ANT450Y10-WR at 460 MHz

E-Plane
Gain: 10.2 dBd

H-Plane
Gain: 10.2 dBd

The Telewave ANT450Y10-WR is a high performance directional antenna, designed especially for point to point as well as point/multipoint applications. This antenna produces 10 dBd forward gain with an excellent front-to-back ratio. Solid aluminum elements with 360° welds prevent intermodulation and provide exceptional strength.

Each antenna is completely protected with our high-tech Txylan™ coating, which provides icing resistance and protection from corrosive gases, UV radiation, salt spray, acid rain and wind-blown sand. The feed line is protected within the boom, and the radiating element is completely sealed

against ice and other hazards with a tough, RF-transparent radome.

The ANT450Y10-WR includes a welded vertical plate and mast clamp set. A horizontal welded plate is optional, or the ANTM400H adapter can be used. The clamp set fits any vertical mast or tower support from 1.5"-3.5" O.D.

For installations on angled supports, the Universal mount option deletes the welded clamp, providing 3 separate planes of rotation and almost any required orientation. The "U" mount attaches to virtually all supports up to 3.5" in diameter, and can be adapted to flat surfaces and utility poles.

Gain: 12.2 dBd

H-Plane
Gain: 12.2 dBd

TYPICAL VSWR RESPONSE

The Telewave ANT930Y12-WR Yagi antenna is a high performance directional antenna, with reduced sidelobes and very high front-to-back ratio. Twelve elements provide a minimum of 12.2 dBd (14.3 dBi) forward gain, and coverage of the entire 900 MHz commercial band. The boom and elements are solid 360° welded aluminum to prevent intermodulation and provide exceptional strength.

All antenna components are completely protected with our high-tech Txylan™ coating, which seals the antenna against corrosive gases, UV radiation, salt spray, acid rain, and wind-blown sand in desert environments. This coating also greatly reduces ice buildup.

The active element and feed line are sealed within the antenna.

The ANT930Y12-WR includes a welded vertical plate and mast clamp set. A horizontal welded plate is optional, or the ANTM400H adapter can be used. The clamp set fits any vertical mast or tower support from 1.5"-3.5" O.D. For hardline cable a 90°-angle feed option is available.

For installations on angled supports, the Universal mount option deletes the welded clamp, providing 3 separate planes of rotation and almost any required orientation. The "U" mount attaches to virtually all supports up to 3.5" in diameter, and can be adapted to flat surfaces and utility poles.

ANT2045Y12-WR

YAGI ANTENNA 12.2 dBd / 14.3 dBi

ANT2045Y12-WR at 2045 MHz

E-Plane
Gain: 12.2 dBd

H-Plane
Gain: 12.2 dBd

The Telewave ANT2045Y12-WR is a rugged, wideband, high gain Yagi antenna for the 3G UMTS/PCS bands, designed for handheld use with many types of portable wireless analyzers. This antenna can also be installed for fixed use in any environment. The antenna uses thirteen solid brass elements, and produces 12.2 dBd forward gain with exceptional front-to-back performance. Construction and design are optimized to prevent RF intermodulation, and ensure precise pattern control.

Each antenna is completely protected with Telewave's high-tech Txylan™ coating, which seals

the antenna against corrosive gases, UV radiation, salt spray, acid rain and wind-blown sand. The feed line is sealed within the antenna boom, and an RF-transparent radome protects the driven element from corrosion or icing.

The ANT2045Y12-WR includes a small U-clamp and plates that allow the antenna to be mounted for vertical or horizontal polarization. The clamp set can be attached to any vertical mast or tower support between 0.5"-1.125" O.D. The Universal mount option allows mounting to angled supports up to 3.5" O.D., and continuous tilt adjustment.

SPECIFICATIONS

INSTALLATION GUIDE FOR YAGI ANTENNAS

WARNING:

For your safety, do not install any antenna near power lines, and carefully follow all installation instructions. If the antenna falls toward or contacts any overhead wires, immediately let go and stay away. Call the utility company for assistance. Always use safety devices for tower climbing. Ensure that the tower structure is well grounded for lightning protection.

BEFORE ASSEMBLING AND MOUNTING:

Carefully read all instructions and study the diagrams. Check to make sure you have all parts.

PARTS LIST (Fig. 1)

- (1) Antenna assy.
- (1) Mounting plate
- (4) 5/16-18 x 4.0" threaded rod
- (2) 5/16-18 x 1.0" bolt
- (10) 5/16" Hex nuts
- (8) 5/16" Lock washers
- (1) Anti-seize compound

MOUNTING INSTRUCTIONS

1. Apply anti-seize compound to all rod ends. Attach mounting and antenna boom plates to the mast with (4) 5/16" rods per Fig. 1. The mounting and boom plates are grooved to provide self alignment for vertical orientation. The driven element radome should be pointing down.
2. Tighten the hex nuts until all lock washers are flat, then add 1/2 turn to each. Tighten the anti-rotation bolts and jam nuts to resist turning forces on the antenna.
3. The antenna input connector is a Type N or 7-16 DIN Female. Connect the RF feed cable to the antenna output connector. Secure all cables with cable ties. Fig. 2 illustrates a typical method for connecting the RF cable, with a feed cable service loop.
4. Be sure to properly seal the input connector with waterproof tape or other sealing material. See Telewave TWDS-0502 for a recommended method of connector sealing.

Note: Driven element with radome should be pointing down for vertical polarization.

INSTALLATION GUIDE FOR YAGI ANTENNAS

WARNING:

For your safety, do not install any antenna near power lines, and carefully follow all installation instructions. If the antenna falls toward or contacts any overhead wires, immediately let go and stay away. Call the utility company for assistance. Always use safety devices for tower climbing. Ensure that the tower structure is well grounded for lightning protection.

BEFORE ASSEMBLING AND MOUNTING:

Carefully read all instructions and study the diagrams. Check to make sure you have all parts.

PARTS LIST (Figure 1)

- (1) Antenna assy.
- (2) Mounting plates
- (1) 5/16-18 U-bolt
- (2) 5/16" Hex nuts
- (2) 5/16" Lock washers
- (1) Anti-seize compound

MOUNTING INSTRUCTIONS

1. Apply anti-seize compound to U-bolt ends. Loosely attach mounting plate with 2 grooves and antenna clamp plate to the mast with U-bolt per Fig. 1. Slide the antenna boom end into the groove in the mounting plates, and rotate the antenna elements according to the requirements of the application. The driven element radome should be pointing down for vertical operation.
2. Tighten the hex nuts until the lock washers are flat, then add 1/2 turn.
3. The antenna input connector is a Type N or 7-16 DIN Female. Connect the RF feed cable to the antenna input connector. Secure all cables with cable ties. Fig. 2 illustrates a typical method for connecting the RF cable, with a feed cable service loop.
4. Be sure to properly seal the input connector with waterproof tape or other sealing material. See Telewave TWDS-0502 for a recommended method of connector sealing.

WIDEBAND ANTENNAS

Telewave Wideband Directional antennas offer a simple, rugged package for RF testing, troubleshooting and coverage analysis.

Telewave Wideband Discone antennas combine proven designs and ultra-rugged construction to withstand the most extreme conditions. Broad beamwidth enables communication over hundreds of miles from mountain-top sites to aircraft, with frequency coverage as wide as 30-3000 MHz in one antenna.

Telewave Discone antennas are fabricated from solid 6061-T6 aluminum, and completely welded for maximum strength and electrical performance. Each antenna is fully coated with our high-tech Txylan™ coating, which provides total protection from water, corrosive chemicals, salt spray, and windblown abrasives.

This smooth black coating also dramatically reduces surface friction, reducing and often preventing ice adhesion, while improving absorption of solar radiation. The ANT260KT is also available with Desert Tan coating, offering all the same benefits and clean visual integration in a desert environment.

The ANT280S is light enough to be used as a tactical antenna for field deployment, and can complement or replace multiple antennas on a mobile command vehicle. The 500 watt power rating allows use of high-power radios and tactical repeaters. The standard connector type is N Female, and a 7-16 DIN-F can be installed as an option for higher power applications.

ANT220K WIDEBAND DISCONE ANTENNA

The Telewave ANT220K is an extremely rugged, wideband discone antenna for all frequencies between 30 MHz and 3 GHz. The wide vertical beamwidth of discone antennas allows clear communication for ground and ground-to-air applications.

Telewave discone antennas are designed to survive the most extreme conditions, where conventional antennas often fail. They are field-proven in US and overseas deployments and support many voice and data requirements in multiple bands.

Each discone is constructed from Mil. Spec. 6061-T6 solid aluminum, fully welded at all joints for maximum strength. All internal junctions are enclosed within a ruggedized radome to ensure survivability in the worst environments.

The radome and Txytan™ coating on all metal surfaces ensures complete protection from corrosive gases, ultraviolet radiation, salt spray, acid rain and sand storms in desert environments.

The ANT220K is designed to be clamped to a 1.5"-3.5" diameter galvanized steel support pipe. An ANTC482 dual clamp set is included.

ANT280S

WIDEBAND DISCONE ANTENNA

The Telewave ANT280S Discone is a rugged, lightweight, wideband antenna for all frequencies between 118 MHz and 3 GHz. This versatile antenna provides a highly flexible solution to interoperability requirements in multiple bands.

Each antenna is constructed from Mil. Spec. 6061-T6 solid aluminum, welded at all joints for maximum strength. A high-strength radome encloses the upper cone and RF connections to ensure survivability in adverse environments.

The radome and Txytan™ coating on all metal surfaces ensures complete protection from corrosive gases, ultraviolet radiation, salt spray, acid rain and sand storms in desert environments.

The antenna has a 1.5" diameter mast and a dual clamp kit is available for mounting to a 1.5"-3.5" O.D. support pipe.

The ANT280S is light enough to be used as a tactical antenna for field deployment, and can complement or replace multiple antennas on a mobile command vehicle. The 500 watt power rating allows use of high-power radios and tactical repeaters.

The full-surface coating and rugged construction means it can also be permanently mounted on a tower or command center roof for long-term fixed operation.

The ANT280S is ready to operate with a single or multiband radio using one antenna output. Several types of low-loss couplers are available for multi-radio operation.

For optimum performance in the lowest frequency ranges, the antenna should be mounted at least 20 feet above the closest reflecting surface.

SPECIFICATIONS	
Frequency (continuous)	118 MHz - 3 GHz
Power rating (typ.)	500 watts
Gain (typ.)	0 dBd
Impedance	50 ohms
VSWR	1.5:1 or less (118 - 136 MHz at 1.8:1 VSWR)

E-plane: 400 MHz

ANT400K, KS

WIDEBAND DISCONE ANTENNA

The Telewave ANT400K is an extremely rugged, wideband disccone antenna for all frequencies between 400 MHz and 3 GHz. The wide vertical beamwidth of disccone antennas allows clear communication for ground, sea, and ground-to-air applications.

Telewave disccone antennas are designed to survive the most extreme conditions, where conventional antennas often fail. They are field-proven in military deployments and the offshore oil and gas industry, and support many voice and data requirements in multiple bands.

Each disccone is constructed from Mil. Spec. 6061-T6 solid aluminum, fully welded at all joints for maximum strength. All internal junctions are enclosed within a ruggedized radome to ensure survivability in the worst environments.

The radome and Txytan™ coating on all metal surfaces ensures complete protection from corrosive gases, ultraviolet radiation, salt spray, acid rain and sand storms in desert environments.

The ANT400K is designed to be clamped to a 1.5"-3.5" diameter galvanized steel support pipe. An ANTC482 dual clamp set is included. The ANT400KS is provided with a shortened support mast for compact installations.

Enclosure dimensions (H x W x D)	10.5" x 13.5" x 1.25"
Weight	2.5 lb.

ANTENNA MOUNTING HARDWARE

ANTC482

The ANTC482 Mounting Clamp Kit is fabricated from heavy-duty galvanized steel, with stainless steel fasteners. The middle clamps are separate for more flexible installation. Designed for mounting to square or round member towers from 1.5"-3.5" O.D. Two complete clamp sets are included in the kit. This clamp set can also be used in a 90-degree crossover configuration.

ANTM432

The ANTM432 is an insulated top support bracket for Telewave F6-8-10 collinear antennas. It is field-adjustable from 32"-43" from the tower. The boom is fabricated from UV-resistant PVC, and will not disrupt the VSWR or pattern of the antenna. (1) ANTC484 clamp and (2) steel band clamps are included with the kit.

ANTC483 / ANTC483SS

The ANTC483 Mounting Clamp Kit is fabricated from heavy-duty galvanized steel, with stainless steel fasteners. The 483SS model clamps are fabricated from stainless steel. The middle clamps are welded at the center. Designed for mounting to square or round member towers from 1.5"-3.5" O.D. Two complete clamp sets are included in the kit.

ANTS420

The ANTS420 Mast Shim Set allows mounting of Telewave folded dipoles to a 1.25 inch diameter mast or tower leg. One shim set is required for each dipole clamp.

ANTM431

The ANTM431 is a top support bracket, designed to provide proper top support for a mast only. It is constructed from heavy galvanized steel. The bracket is adjustable from 13 to 21 inches from the tower. The kit includes (1) ANTM431, (1) ANTC484 Mounting Clamp, and (1) adjustable steel band clamp.

ANTM433

The ANTM433 Side Mount Kit is designed to mount an antenna 15 inches from a tower. It is fabricated from heavy-duty galvanized steel. (2) ANTC484 clamps are included in the kit.

ANTC484

The ANTC484 mounting clamp consists of a steel V-bolt assembly and associated hardware, combined with a back plate of heavy-duty galvanized steel. It will mount to 3-inch round members or 2-inch angled members.

ANTC485

Dual U Bolt clamp set for F2 series collinears. For mounting to round member towers from 1.5"-3" O.D.

ANTM434

The ANTM434 Adjustable Side Mount Kit mounts across a tower face to provide a standoff mounting configuration. The antenna can be positioned 2 to 8 feet from the tower. Mounting hardware is galvanized steel. Supplied without support booms or mast. For use on tower legs from 1.5"-3.5" O.D.

ANTM434-M

Includes support booms. 2 inch Sch. 40 galvanized steel.

ANTENNA CONNECTION WEATHERPROOFING

The primary purpose of wrapping a connection is to seal it against moisture intrusion. The procedure illustrated here will give excellent results if done properly, and will last for years. The required materials are shown below: vinyl tape, butyl tape, mastic, and Scotch-Kote.

After a connection has been made and tested to verify that it has been properly done, it needs to be sealed. Begin by wrapping vinyl tape as shown to cover the connectors and a portion of both cables. Stretch the tape a minor amount as it is wound onto the cable, the connectors and then onto the other cable. Wrap this so that each new layer covers half of the previous wrap. Keep the wraps neat and as smooth as possible.

The second step is to wrap a second layer over the first layer, but wrap it in the other direction as shown. These two layers will keep the connection clean and tight. The next step is to wrap a layer of vinyl tape with the adhesive side out, as shown. Begin by folding the tape onto itself at a 45 degree angle. This provides a sticky surface to help bond the the next layer of tape to the connection.

The next step is to wrap the entire connection with the butyl tape. This layer provides the majority of the moisture shielding. The final step is to coat the entire butyl layer with Scotch-Kote. Coat a portion of each cable and the entire final layer of tape.

This material works very quickly to fuse the last layer together and to the cable jacket. After the Scotch-Kote has dried, encapsulate the finished connection with the mastic material.

It is best to secure the cable to the support on either side of the connection, not over the connection. One tie on each side is best, and spaced so as to support the connection, but not to disrupt the surface of the seal. This provides support, but will not compromise the seal you have just made. Added insurance against abrasion may be achieved by placing a single layer of vinyl tape onto the support where the connection will rest before tying the cable down. This provides some cushioning between the connection and the support.

ANTPD 204, 206

LOW BAND RF POWER DIVIDERS

Telewave Low Band RF Power Dividers divide up to 500 Watts of power from a single source over 2 outputs. These dividers are available in two overlapping frequency bands from 24 MHz to 72 MHz, with very low VSWR and insertion loss. Power is divided equally to each output port.

Telewave power dividers are custom machined from solid 6061-T6 aluminum stock. These devices utilize solid metal conductors for all internal RF paths, enabling high power handling and extremely low insertion loss. No coaxial cabling of any kind is used internally, and no tuning is required for full band coverage. The standard connector type is N Female, and 7-16 DIN can also be supplied as an option for higher power applications.

Telewave power dividers also feature our high-tech Txylan™ coating, which provides exceptional protection from water, corrosive chemicals, salt spray, and windblown abrasives.

This poly-polar coating beads water, and is chemically bonded to the metal surface of the device, reducing and often preventing ice adhesion, and does not chip or flake.

In situations where port-to-port isolation is not required, Telewave power dividers can also be used to feed two receivers from a common antenna, with less than 0.25 dB insertion loss.

ANTPD SERIES RF POWER DIVIDERS

Telewave RF Power Dividers divide up to 500 Watts of power from a single source over 2, 3, or 4 outputs. Dividers are available in overlapping frequency bands from 24 MHz to 2.5 GHz, with very low VSWR and insertion loss. Power is divided equally to each output port.

Telewave power dividers are custom machined from solid 6061-T6 aluminum stock. These devices utilize solid metal conductors for all internal RF paths, enabling 500 watt continuous power handling and extremely low insertion loss. No coaxial cabling of any kind is used internally, and no tuning is required for full band coverage. The standard connector type is N Female, and 7-16 DIN can also be supplied as an option for high power applications.

Telewave power dividers also feature our high-tech Txylan™ coating, which provides exceptional protection from water, corrosive chemicals, salt spray, and windblown abrasives. This poly-polar coating beads water, and is chemically bonded to the metal surface of the device, and does not chip or flake. The size and shape of these dividers lends itself to many possible mounting applications, including panels, masts, or tower legs, providing maximum installation flexibility.

In situations where port-to-port isolation is not required, Telewave power dividers can also be used to feed several receivers from a common antenna, with less than 0.25 dB insertion loss.

TS-15xx, TS-22xx, TS-46/47xx SERIES CROSSBAND COUPLERS

Telewave Crossband Couplers allow transmitters, receivers, and antennas in the 150, 220, 450, and 700/800 MHz bands to share a common feedline. A single coupler can be used to couple two radios to a multiband antenna, or a multiband radio to two antennas. Two couplers are used with two radios and two antennas.

The ability to share a feedline between systems on different bands simplifies installation, while reducing cost and tower loading. No tuning is required for full band coverage, and each unit is completely weather-sealed for zero maintenance and long service.

TUNING INSTRUCTIONS

- **Single / Dual Isolators**
- **Pass-Reject Cavity and Duplexer**
- **Pass Cavity**
- **VSWR / Return Loss**

SINGLE FERRITE ISOLATORS

TUNING INSTRUCTIONS

The following tuning instructions are provided for use when only a wattmeter is available. Tuning range with this method is approximately +/- 1 MHz at VHF, +/- 2 MHz at UHF, and +/- 5 MHz at 800/900 MHz. Maximum tuning range requires a more complex procedure and a network analyzer, and is also available from Telewave for a nominal fee. The initial tuning should be done at the lowest power available to reduce the possibility of damage to the transmitter or cavities during the tuning procedure. The transmitter must be turned off to prevent damage to the output stages whenever connections are changed.

Install the isolator in its permanent mounting position if possible. Connect the cable from the transmitter directly to the isolator port A (Fig. 1). Remove the snap plugs from adjustment holes #1, and #2. Adjustment #3 is factory set and should not be changed. Connect a terminating wattmeter, or a wattmeter with a load attached, to the output port B. Using a non-metallic tool, tune adjustment #1 and #2 for a maximum reading.

Remove the wattmeter and the dummy load and connect the antenna or cavity to the isolator (Fig. 2). Remove the supplied termination from port C and install the wattmeter and termination in its place. Now tune the cavity* for a minimum reading through the wattmeter. This will establish the highest Q of the cavity and maximum power to the antenna. Adjustment #2 may be "touched up" at this time. Adjust for a minimum reading on the wattmeter. If the reading is high or the load becomes hot, problems may exist with the antenna or transmission line. Further testing should be done. When testing / tuning is complete, remove the wattmeter and reconnect the supplied termination to port C.

**When a cavity is under power, high RF currents and voltages exist on the internal surfaces. Tuning under full TX power may damage the cavity. If there are no other options, use the lowest power available with minimum tuning adjustments.*

FIGURE 1

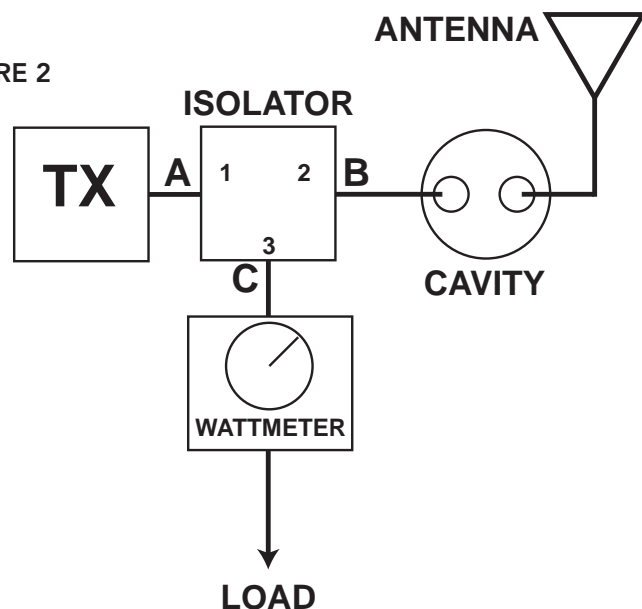

FIGURE 2

DUAL FERRITE ISOLATORS BASIC TUNING INSTRUCTIONS

The following tuning instructions are provided for use when only a wattmeter is available. Tuning range with this method is approximately +/- 1 MHz at VHF, +/- 2 MHz at UHF, and +/- 5 MHz at 800/900 MHz. Maximum tuning range requires a more complex procedure and a network analyzer, and is also available from Telewave for a nominal fee. The initial tuning should be done at the lowest power available to prevent damage to the transmitter or cavities during the tuning procedure. Turn the transmitter off to prevent damage whenever connections are changed. This procedure can also be used to tune 2 single isolators joined with a barrel connector.

Install the isolator in its permanent mounting position if possible. Connect the cable from the transmitter directly to the isolator port A (Fig. 1). Remove the snap plugs from adjustment holes #1, #2, #3 and #4. Adjustment #5 & #6 are factory set and should not be changed. Connect a terminating wattmeter, or a wattmeter with an appropriate load attached, to the output port B. Using a non-metallic tool, tune adjustment #1, #2, #3, & #4 for a maximum reading.

Special Note - Models T-7560 and T-8660 do not have a hole #3. This is not required above 700 MHz. Models in all bands may have reversed connections for cable routing. (Fig. 4) Port numbers always have the same function, regardless of location.

Remove the wattmeter and the dummy load and connect the antenna and cavity to the isolator. Remove the supplied termination from port C and connect the wattmeter and termination in its place (Fig. 2). Now tune adjustment #2 & #3 for minimum reading on the wattmeter. Retune these adjustments several times to ensure a minimum reading. Remove the wattmeter and termination, and reconnect the original termination to port C. Next, remove the termination from port D and install the wattmeter & load in its place (Fig. 3). Now tune adjustment #4 for minimum reading on the wattmeter.

Finally, tune the cavity* (Fig. 3) for a minimum reading through the wattmeter. This will establish the highest Q of the cavity and maximum power to the antenna. Adjustment #4 may be "touched up" at this time. Adjust for a minimum reading on the wattmeter. If the reading is high or the load becomes hot, problems may exist with the antenna or transmission line. Further testing should be done. When testing / tuning is complete, remove the wattmeter and reconnect the supplied termination to port D.

**When a cavity is under power, high RF currents exist on the internal surfaces. Tuning under full power may damage the cavity. If there are no other options, use the lowest power available with minimum tuning adjustments.*

FIGURE 3

FIGURE 2

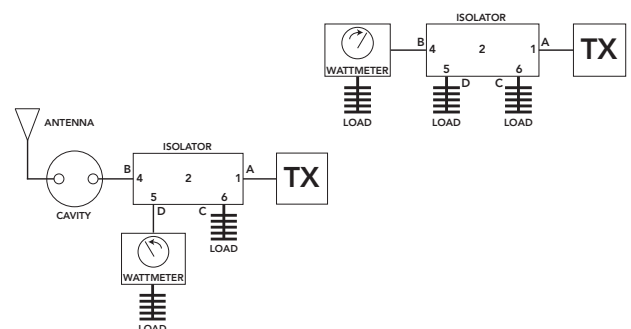

FIGURE 4

PASS CAVITY TUNING

IMPORTANT:

All cavities and cavity-based devices are factory tuned to the exact frequencies indicated on the label. No further tuning or optimization is necessary. If frequency or insertion loss must be changed, Telewave recommends that the equipment be returned to the factory to ensure optimum performance. The instructions in this document are for use only if factory service is not practical.

TEST EQUIPMENT MINIMUM REQUIREMENTS:

1. Calibrated RF signal generator with 0 dBm output.
2. Calibrated frequency counter or meter.
3. Calibrated RF indicator such as a network analyzer or spectrum analyzer, with sensitivity of at least 80 dB below the RF generator output.
Tools required: 7/16" wrench and nut-driver, medium and small flat-blade screwdrivers.

NOTE: When transmitter power is passing through a cavity, high RF voltages and currents exist on the internal surfaces. Cavity tuning should be performed using a signal generator only. If no other RF source is available, use the lowest output power available and make only minimal adjustments.

1. TUNING THE PASS FREQUENCY

- A. Adjust the signal generator to the desired pass frequency at 0 dBm output.
- B. Connect the signal generator to one cavity connector, and the monitor or analyzer to the other side.
- C. Loosen the 7/16" locking nut on the center tuning shaft, and tune the shaft of the cavity for maximum response as indicated on the analyzer.

2. INSERTION LOSS ADJUSTMENT

- A. Adjust the signal generator to the the desired pass frequency at 0 dBm output.
- B. Loosen the three retaining screws around the loop connector. Rotate the loop until the analyzer indicates the desired insertion loss, and balanced return loss. Tighten the retaining screws, and repeat Step 1.

PASS-REJECT CAVITY AND DUPLEXER TUNING

IMPORTANT:

All cavities and cavity-based devices are factory tuned to the exact frequencies indicated on the label. No further tuning or optimization is necessary. If frequency or insertion loss must be changed, Telewave recommends that the equipment be returned to the factory to ensure optimum performance. The instructions in this document are for use only if factory service is not practical.

TEST EQUIPMENT MINIMUM REQUIREMENTS:

1. Calibrated RF signal generator with 0 dBm output.
 2. Calibrated frequency counter or meter.
 3. Calibrated RF indicator such as a network analyzer or spectrum analyzer, with sensitivity of at least 80 dB below the RF generator output.
- Tools required: 7/16" wrench and nut-driver, medium and small flat-blade screwdrivers.

NOTE: When transmitter power is passing through a cavity, high RF voltages and currents exist on the internal surfaces. Cavity tuning should be performed using a signal generator only. If no other RF source is available, use the lowest output power available and make only minimal adjustments.

1. TUNING THE PASS FREQUENCY

- A. Adjust the signal generator to the desired pass frequency at 0 dBm output.
- B. Connect the signal generator to one side of the cavity "T" connector, and the monitor or analyzer to the other side.
- C. Loosen the 7/16" locking nut on the center tuning shaft, and tune the shaft of the cavity for maximum response as indicated on the analyzer.

2. TUNING THE REJECT FREQUENCY

- A. Adjust the signal generator to the desired reject frequency at 0 dBm output.
- B. Connect the signal generator to one side of the cavity "T" connector, and the monitor or analyzer to the other side.
- C. Tune the capacitor for maximum attenuation of the output signal, as indicated on the analyzer.

PASS-REJECT CAVITY AND DUPLEXER TUNING

3. INSERTION LOSS ADJUSTMENT

- A. Adjust the signal generator to the desired pass frequency at 0 dBm output.
- B. Loosen the three retaining screws around the loop connector. Rotate the loop until the analyzer indicates the desired insertion loss. Tighten the retaining screws, and repeat Steps 1 and 2. An increase in the insertion loss will also increase the attenuation at the reject frequency. Minimum insertion loss occurs when the capacitor is on the opposite side of the connector, away from the center tuning rod.

NOTE: All tuning adjustments are mutually dependent. This means that when you adjust the capacitor, the insertion loss will change and the loop position may have to be readjusted. The center tuning may have changed as well. Multiple adjustments will be required to achieve the best performance.

4. PASS-REJECT DUPLEXER TUNING PROCEDURE

- A. Examine the labels on the top of the duplexer, and locate the TX and RX ports. The cavity set for TX will be PASS-TX and REJECT-RX. The cavity set for RX will be PASS-RX and REJECT-TX. If TX and RX are not marked, then you must determine which port is connected to the lower frequency device, and which is connected to the higher frequency device. The cavity set for the low frequency device will be PASS-LOW and REJECT-HIGH. The cavity set for the high frequency device will be PASS-HIGH and REJECT-LOW.
- B. Tune one cavity at a time using Steps 1-3. The reject frequency of one set of cavities is always tuned to the pass frequency of the other set.

Product Warranty / Terms of Sale

Products sold by Telewave, Inc. (Seller) and covered by this Warranty are warranted to be free from defects in material and workmanship at the time of and for the period specified below after delivery to the Buyer. Seller's entire warranty obligation is limited to making adjustments by repair, replacement, or refunding the purchase price of any product which is returned to the Seller as provided below within the specified period from the date of shipment by the Seller. In no event shall Seller be liable for direct, special, or consequential damages for breach of warranty.

Warranty periods:
Antennas and mounting hardware - 5 years
All other products - 1 year

Adjustment will not be allowed for products which have been damaged by lightning, subjected to abuse, improper application or installation, alteration or accident, or negligence in use, storage, transportation or handling. Alteration or removal of the serial number or identification markings voids the Warranty. Seller shall have the right of final determination as to the existence and cause of a defect, whether adjustment will be allowed, and if allowed, whether adjustment will be by repair, replacement, or refund. Where adjustment is not allowed, a charge of 5% of the original purchase price will be made to the Buyer to cover the Seller's cost of inspection and handling.

Shipping and packaging instructions must be obtained from the Seller before products are returned for adjustment. The Buyer will pay for packing, transportation, and transit insurance costs for returned products. The Seller reserves the right to discontinue models at any time or change specifications, design, or price without notice and without incurring any obligation. Products will be returned to the Buyer with transportation cost collect.

Subject to the provisions of its "Patent Indemnity" clause, the Seller also warrants that it has the right to sell its products, that the Buyer shall have and enjoy quiet possession thereof as against any lawful claims existing at the time of the sale by the Seller, and that said products are free from any charge of encumbrance in favor of third persons existing at the time of sale by the Seller.

The foregoing constitutes the Seller's entire warranty, express, implied or statutory with respect to its products and states the full extent of its liability for breach of Warranty and for damages, whether direct, special or consequential resulting from any such breach. No change whatsoever thereto shall be binding upon the seller unless made in writing and signed by a duly authorized representative of the Seller.

RETURN / RMA PROCEDURE:

Please contact Telewave via phone, fax, or email to discuss any product issues with a sales engineer. Many issues occur due to incorrect installation, misconfiguration or irregularities within an existing system, and these can often be resolved at no charge without return of products.

1. Contact Telewave for technical assistance at sales@telewave.com or 1-800-331-3396.
2. Telewave will transfer the call or email to the appropriate department.
3. If it is determined that the product(s) should be returned, the Telewave RMA Dept will ask customer to provide billing and return shipping addresses, product model and serial number (if applicable), date of purchase, and where item was purchased.
4. Customer ships product(s) back to Telewave at customer's expense:
 - Write RMA number on the outside of the box(es)
 - Include a description of the problem with the product(s)
 - Ship via a trackable shipping method (UPS, Fedex, etc.)
 - Retain proof of shipment and tracking information
5. Product(s) are received by Telewave and evaluated by the appropriate department. Customer is contacted by RMA department before any charges are incurred.
6. Telewave reserves the right to charge for parts, labor, and freight in the event that the issue is not covered under warranty.
7. Telewave will return original, repaired or replacement item at customer's expense unless covered by warranty.
